SESHADRI RAO GUDLAVALLERU ENGINEERING COLLEGE

(An Autonomous Institute with Permanent Affiliation to JNTUK, Kakinada) Seshadri Rao Knowledge Village, Gudlavalleru – 521356

Krishna District, Andhra Pradesh

Program and Course Outcomes

		R-20
		СЕ
S.No.	Course Name	Course Outcomes
	Functional English	 CO1. listening to (and viewing) classroom lectures and other academic presentations with a reasonable degree of accuracy, understanding, and appreciation, and responding to them appropriately; CO2. speaking in academic (e.g. classroom discussions) and social contexts with a fair degree of fluency, accuracy and intelligibility, and with due attention to factors such as purpose, audience, context, and culture;
1		CO3. reading a wide range of informational and functional texts, including course books and reference materials, from print and non-print sources and using them for a variety of purposes; CO4. writing for academic purposes (e.g. assignments, examination answers) in an organized way following the rules of discourse and using vocabulary and grammar appropriately and accurately;
		CO5. To develop in them the communication strategies and social graces necessary for functioning effectively in social, academic, and other situations in which they may be called upon to use English.
2	Linear Algebra and Calculus	 CO1. To understand the procedure to solve the system of linear equations. CO2. To know the method for finding eigenvalues and eigenvectors. CO3. To familiar with the knowledge of differential calculus to support their concurrent and subsequent engineering studies. CO4. To know how to find maxima and/or minima for a given surface CO5. To understand the methods to evaluate areas and
3	Engineering Physics	volumes using integrals. CO1. To Impart the concept of periodic motion CO2. To apply principles of optics for engineering applications. CO3. To explore various NDT using ultrasonic's CO4. To characterize sound propagation in buildings
4	Problem Solving Using C	CO1.To emphasize the use of flowcharts and pseudo code in problem solving.CO2.To apply C Programmingin problem solving.
		CO1. To highlight the significance of universal language of engineers

5	Engineering Graphics	CO2. To introduce the concepts of drawing 3-D objects in 2-D
		planes.
		CO3. To impart computer aided drafting skills.
6	Functional English Lab	 CO1. Functional English (Lab) seeks to develop in the students the communication strategies and social graces necessary in order to function effectively in social and other situations in which they may be called upon to speak in English CO2. It seeks to develop in them a greater awareness of English pronunciation and provides for focused practice with the sounds of English and intonation patterns improve their pronunciation skills and to enable them to speak with a reasonable degree of intelligibility.
		relate with the theoretical studies.
7	Engineering Physics Lab	CO2. To impart skills in measurements.
/	Engineering Physics Lab	CO3. To design and plan the experimental procedure and to
		record and process the results.
		CO1. To impart the basic knowledge about the environment
		and ecology.
8	Environmental Studies	CO2. To develop an attitude of concern for biodiversity and its
0		conservation
		CO3. To create awareness on environmental pollution and
		waste management.
9	Professional Communication	 CO1. To equip the students with common employability skills (the skills required for gaining employment and performing successfully in different careers) which can enable them to perform communication tasks of increasing length and complexity. CO2. To develop in them the interactional communication
		strategies and social graces which have the potential to add to
		the effectiveness of professional communication.
	1	CO1. To gain the knowledge of Laplace and inverse
10	Integral Transforms and Vector Calculus	transforms. CO2. To understand the concepts of Fourier series and Fourier Transforms CO3. To know about vector differentiation and integration.
	1	CO1. To impart the knowledge of bonding in molecules,
	Engineering Chemistry	adsorption, electrochemistry, corrosion and itsprevention.
11		CO2. To impart the knowledge of water treatment, green chemistry, manufacture and setting of cement, nano materials
	+	and spectroscopic techniques.
		CO1. To impart the basic concepts of force systems, free body diagrams and equilibrium conditions.

12	Applied Mechanics	 CO2. To introduce the concept of friction and virtual work principle and to familiarize on calculating the geometric properties like centroid, centre of gravity and moment of inertia of various sectional areas and masses. CO3. To develop the knowledge on basic principles of kinematics and kinetics with simple applications. CO4. To introduce applications on using work-energy principle and Impulse momentum methods.
13	Universal Human Values 2: Understanding Harmony	 CO1. To help students understand the need, basic guidelines, content and process of value education CO2. To help students initiate a process of dialog with in themselves to know what they really want to be in their life and profession. CO3. To facilitate the students to understand harmony at all the levels of human living, and live accordingly. CO4. To understand the harmony in nature and existence CO5. To facilitate the students in applying the understanding of harmony in existence in their profession and lead an ethical life.
14	Professional Communication Lab	CO1. Professional Communication (Lab) is a career-oriented programme. It seeks to develop in the students the competence required to perform professional communication tasks of increasing length and complexity, which can help them secure employment and perform successfully in their careers.
15	Engineering Chemistry Lab	CO1. To develop the skill on chemical and instrumental methods of analysis.CO2. To acquire the skill in preparation of synthetic materials.
16	Applied Mechanics Lab & Building Trade Practice	CO1. To impart knowledge on basic engineering applications. CO2. To impart hands-on training on basic engineering trades.
17	Constitution of India	 CO1. To impart knowledge on basic engineering applications CO2. To enable the student to understand the importance of constitution. CO3. To understand the structure of Executive, Legislature and Judiciary. CO4. To understand Philosophy of fundamental rights and duties. CO5. To understand the autonomous nature of constitution bodies like Supreme Court and High Court Controller and Auditor General of India and Election Commission of India

		CO6. To understand the Central and State relation, financial
		and administrative.
18	Building Materials and Building Construction	CO1. To learn about the nature, properties, classification and manufacturing process of building materials and familiarize with various methods of masonry construction.
		CO2. To impart the knowledge of building components, finishings
	Elements of Mechanical and	CO1. To familiarize with the basic concepts of transmission systems, machine tools and internal combustion engines
19	Electrical Engineering	CO2. To introduce the basic concepts of electrical circuits.
		CO3. To familiarize with the operation of DC machines and
		Induction Motor.
		CO1. Assess the internal properties of materials such as simple
		stresses, strains, thermal stresses and elastic constants.
		CO2. Derive the flexure equation and evaluate the flexural
20	Mechanics of Solids	stresses and determine the principal stresses and apply the
		energy theorems to beams.
		CO3. Draw shear stress distribution for rectangular, circular,
		triangular, I, T and angle sections and application of the torsion
		equation
		CO1. To familiarize with static and dynamic aspects of fluids
21	Fluid Mechanics	CO2. To impart knowledge on laminar flow, turbulent flow and
21		Boundary layer. CO3. To introduce the concept of flow through closed conduits
		and measurement of flow.
		CO1. To make understand the importance of surveying in civil
		engineering field
22	Surveying	CO2. To create awareness on various types of surveying and
	Surveying	their instruments
		setting
		CO1. To understand the importance of Geology for selection of
		site materials and design of Civil Engineering Projects.
22	Engineering Geology & Geo- spatial Applications	CO2. To know about the principles of remote sensing and to
23		introduce working principle of GIS and its importance.
		CO3. To impart the knowledge on air-borne and space-based
		imaging technologies and their working principles.
		CO1. To introduce various stress and strain measuring
24	Mechanics of Solids Lab	equipment.
<i>∠</i> −r		CO2. To familiarize with various physical, mechanical and
		strength properties of various engineering materials.
	Survey Field Work	CO1. To familiarize with surveying equipments/instruments
25		like chain, compass, level, theodolite and total station.
-		CO2. To impart knowledge on linear and angular measurement

26	Numerical & Statistical	CO1. To introduce the concepts of numerical and statistical
20	Methods	methods for solving engineering problems.
		CO1. To impart the knowledge on obtaining the slopes and
		deflections of determinate beams and to know about the
		deflection of helical springs.
27	Structural Analysis	CO2. To familiarize with the calculations of crippling loads in
		columns, struts and the resultant stresses in thin cylinders.
		CO3. To familiarize with the analysis of indeterminate beams
		by using various methods.
		CO1. To impart knowledge on concepts and the design
28	Hydraulics & Hydraulic	principles of Uniform and Non-Uniform flow in open channels.
	Machines	CO2. To understand the analysis of jet on vanes
		CO3. To familiarize with working and analysis of hydraulic
		turbines and centrifugal pump.
		CO1. To introduce types, properties and applications of
		cements and admixtures
29	Concrete Technology	CO2. To build the knowledge on different types of aggregates.
		CO3. To impart knowledge on setting, hardening and
		rheological characteristics of concretes and to familiarize with
		BIS method of Mix Design.
		CO1. To introduce Scripting Language.
		CO2. To explore various problems solving approaches of
30	Python Programming	computer science.
		CO3. To be familiarized with general coding techniques to
		solve object-oriented programming concepts.
		CO1. To impart the knowledge on flow measurement through
		closed conduit/tank/ channel.
31	Fluid Mechanics & Hydraulic	
51	Machines Lab	hydraulic machines by conducting laboratory experiments
		CO3. To verify the principles of channel flow and to draw the
		performance curves for various hydraulic machines
		CO1. To develop the skill of testing the building materials like
		cement & aggregates
32	Concrete Technology Lab	CO2. To impart the knowledge on properties of fresh concrete.
		CO3. To familiarize with the strength properties of hardened
		Concrete and to introduce the concepts of non-destructive
		testing.
		CO1. To provide coherent concepts on dynamic loading,
		earthquake mechanism and earthquake effects.

33	Introduction to Earthquake Engineering	 CO2. To introduce concepts on structural dynamics, formation of equation of motion for single and multi-degree freedom systems and obtaining natural frequencies and mode shapes CO3. To impart knowledge on elastic and inelastic analyses against earthquake forces. CO4. To familiarize on base isolation systems, seismic dampers and other provide the providet the pr
34	Theory of Structures	and other special topics related to Eearthquake Engineering.CO1. To introduce the concept of analyzing the three hinged and two hinged parabolic arches.CO2. To impart knowledge on solving indeterminate structures by Moment distribution method and Kani's method.CO3. To impart knowledge on influence lines and moving
		loads. CO4. To familiarize with lateral load analysis by using approximate methods and Matrix methods
35	Soil Mechanics	CO1. To impart knowledge on the basic and engineering properties of soilsCO2. To familiarize with stress distribution due to self-weight of soils and due to externally applied loads
36	Water and Waste Water Engineering	 CO1. To make the students conversant with sources, demand, quality of water, water treatment processes and its design CO2. To provide adequate knowledge on Pumps, conveyance, distribution of water and sewage treatment processes in primary treatment. CO3. To have adequate knowledge about various sewage treatment processes in secondary treatment.
37	Advanced Concrete Technology	CO1. To understand the structure of hydrated cement paste and mechanism of admixtures CO2. To familiarize with the mix design procedure for given grade of concrete. CO3. To impart the knowledge about durability of concrete and special concretes
38	Project Planning & Control	CO1. To define the importance of project management (PM) for construction projects.CO2. To identify the need of economics, management aspects and construction process.
39	Air Pollutions and Control	 CO1. To study sources and classification of air pollution and understand fundamentals of meteorology and stability of atmosphere CO2. To learn about the different air pollutants and control

		CO3. To knowthe air pollution legislation and regulations
		CO1. To know the significance of advanced surveying in field measurements in terms of utility and precision of data
	Advanced Surveying	collection.
40	Techniques	CO2. To learn the principles of Electromagnetic distance
	1 committees	measurement and their accuracy.
		CO3. To get introduced to the concept of Topographic, Aerial
		and project survey
		CO1. To introduce the tests for determining the dry density of
4.1		soils.
41	Geotechnical Engineering Lab	CO2. To evaluate the engineering properties of the soil.
		CO3. To familiarize with different test procedures for obtaining
		shear strength of soils.
		CO1. To analyze physical, chemical characteristics of water
42	Water and Waste Water	and wastewater
42	Engineering Lab	CO2. To determine optimum dosage of coagulant, and residual chlorine.
		CO3. To estimate organic strength of wastewater
		CO1. To analyze physical, chemical characteristics of water
		and wastewater
		CO2. To define the role of different software that appreciates
43	Building Drafting Studio Lab	the drafting process for construction buildings.
		CO3. To familiarize with drafting commands in the software
		platform that support and complete the drafting of the desired
		building/elements.
		CO1. To determine the stress and strain relations and in
		Cartesian coordinate systems
		CO2. To solve 2D Cartesian coordinate system using
		generalized Hooks law and Airy's stress functions.
		CO3. To determine the stress and strain relations and in polar
44	Theory of Elasticity and	coordinate systems.
	Plasticity	CO4. To solve elementary problems of axi-symetry and 3D
		Coordinate systems
		CO5. To understand and relate simple plasticity theory
		concepts.
		CO6. To correlate and apply the theory of elasticity to solve
		civil engineering solutions
		CO1. To introduce the soil exploration techniques
45	Foundation Engineering	CO2. To familiarize with lateral earth pressure.
		CO3. To impart the knowledge on load carrying capacity of
		shallow and deep foundations.
		CO1. To study occurrence movement and distribution of water
		that is a prime resource for development of a civilization.
	Hydrology and Irrigation	

46	Engineering	CO2. To provide an overview and understanding of Unit
		Hydrograph theory and its analysis.
		CO3. To discuss the relationships between soil, water and
		plant and their significance in planning an irrigation system
		CO1. To familiarize with the different types of design
		philosophies and IS:456-2000 provisions.
		CO2. To introduce the concepts of shear, torsion, bond and limit
	Design and Drawing of R C	state of collapse and serviceability for analysis and design of
47	Structural Elements	structural elements for flexure along with detailing and
		drawings.
		CO3. To enable the students to learn design of different
		compression members and footings.
		CO1. To familiarize with different concepts in the field of
		-
		highway engineering
48	Highway Engineering	CO2. To acquire design principles of highway geometric and
		pavements
		CO3. To understand causes and types of failures in pavements
		CO1. To familiarize with the fundamentals of finite element
		method.
49	Finite Element Analysis	CO2. To prepare for solving one dimensional and two-
		dimensional problems by FEM.
		CO3. To introduce the concepts of axi-symmetric and iso -
		parametric formulation.
		CO1. To impart the need of ground improvement techniques in
-0	Ground Improvement	improving the strength parameters of soils.
50	Techniques	CO2. To familiarize with various dewatering methods
		CO3. To introduce the applications of reinforced earth,
		confinement systems and geo-synthetics.
		CO1. To introduce the concept of watershed management and
	Water Shed Management	understand the watershed characteristics
		CO2. To learn the principles of soil erosion and measures to
51		control erosion and to appreciate various water harvesting
		techniques
		CO3. To learn land management practices for various land
		use/land cover
		CO1. To understand sources and characteristics and acquire an
	Solid Waste Management	understanding reduction, storage, recycling of solid waste.
52		CO2. To familiarise the different waste collection systems,
52		transfer and transport, and study the importance of processing
		techniques
		CO3. To describe different disposal methods
		CO1. To impart the knowledge of aggregate properties and
		develop testing skills

53	Highway Materials Lab	CO2. To impart the knowledge of bitumen properties and
		develop testing skills
		CO3. To study the traffic characteristics
		CO1. To develop the drawing skills by using Software
54	Structural Engineering Lab	CO2. To introduce various concepts of non-destructive testing
		CO3. To familiarize with effect of dynamic forces on
		structures
		CO1. To impart knowledge on degrees of freedom, dynamic
		loading and ability to formulate dynamic equation of motion
		and apply them to simple dynamic problems.
		CO2. To introduce the methodology for determining the natural
55	Structural Engineering Lab	frequencies and mode shapes for un-damped multi-degree
55		freedom systems- Examples on applying up to two-degrees of
		freedom systems.
		CO3. To create experimental knowledge on spring-mass model,
		obtaining frequencies and mode shapes using shake table and
		demonstration of important earthquake tips
		CO1. To familiarize with the concepts of Managerial
	Engineering Economics and	economics and its significance in achieving business objectives
56		CO2. To acquire knowledge on basic financial management
	Financial Analysis	aspects and develop the skills to analyze financial performance
		of a business unit.
		CO1. To introduce the concept of estimate, types of estimate
	Estimation, Costing and Valuation	and estimating a Work.
57		CO2. To build ability of calculating road and canal work
57		quantities.
		CO3. To impart knowledge on different specifications of civil
		works, rate analysis, contracts and valuation
		CO1. To familiarize with the types of structural steel sections,
	Design and Drawing of Steel Structures	Plastic Analysis and IS code provisions.
		CO2. To introduce the principles for design of tension
58		members, compression members and elements of truss using
50		I.S. code.
		CO3. To impart the design aspects of laterally supported
		beams, unsupported beams and welded plate girder in
		accordance with I.S. code provisions.
		CO1. To familiarize with the concept of prestressing and IS
		code provisions
59	Prestressed Concrete	CO2. To impart the knowledge on analysis and losses of
39	Structures	prestress
		CO3. To introduce design procedures of pre-stressed concrete
		members under flexure and shear and Deflection.

		CO1. To familiarize with advanced knowledge of foundations
60	Advanced Foundation	in various practices.
	Engineering	CO2. To understand different foundation practices in difficult
		soil conditions under different loading conditions.
		CO1. To know the principles of design of hydraulic structures
		on permeable foundations.
		CO2. To familiarize with various types of dams and selection
		of suitable type depending on site conditions.
61	Hydraulic Structures	CO3. To impart the knowledge on design criteria of gravity
01	Trydraune Structures	dams and modes of failure.
		CO4. To provide knowledge on various hydraulic structures
		such as energy dissipaters, head and cross regulators and
		structures involved in cross drainage works.
		CO1. To know the principles of design of hydraulic structures
		on permeable foundations.
	La la stais 1 XV - ta XV - ta a	CO2. To study Characteristics and primary treatment methods
62	Industrial Waste Water	for industrial wastewater.
	Treatment	CO3. To learn physic-chemical and biological treatment
		techniques. CO4. To understand food and material industries waste
		treatment. CO1. To familiarize with the Designs of Flat slabs and
		retaining walls
	Advanced Designed R C	CO2. To understand the loading pattern and design procedure
63	Structure	for silos bunkers water tanks.
	Structure	CO3. To familiarize with I.R.C loads and their application on
		designing the R.C Bridges.
		CO1. To be acquainted with different construction practices
	Construction Technology and	
64	Practices	CO2. To familiarize with the various construction equipment
		used in the construction industry.
		CO1. To introduce the basics of earthquake & structural
		dynamics
		CO2. To familiarize with damages of RC buildings due to
65	Earthquake Resistant Design	earthquakes
		CO3. To impart the knowledge of analyzing of earthquake
		resistant structures and design principles of shear wall.
		CO1. To introduce the basics of earthquake & structural
		dynamics.
		CO2. To familiarize with various components, functions and
	Railways, Harbours and	design principles of railway track geometry
66	Airport Engineering	CO3. To introduce the basic components of airport and basic
		runway length
	I	1011/10/ 10115/11

		CO4. To familiarize with the classifications, requirements and
		components of harbours & docks
		CO1. To impart the knowledge on maintenance, inspection and
		assessment of distressed concrete structures.
		CO2. To assess the damage to concrete structures using
		various tests and strengthen measures.
67	Repairs, Retrofitting and	CO3. To familiarize with durability aspects, quality of concrete
	Rehabilitation of Structures	causes of deterioration.
		CO4. To study the various types and properties of repair
		materials and various precautions during retrofitting.
		CO5. To learn various repair techniques of damaged structures
		and corroded structures.
		CO1. To impart the knowledge on maintenance, inspection and
		assessment of distressed concrete structures.
		CO2. To familiarize the concept of precast concrete
68	Precast Concrete Structures	construction.
08	Freeast Concrete Structures	CO3. To impact knowledge on transport, stability and joints in
		precast concrete structures.
		CO4. To impact the design aspects of various precast elements.
(0)		CO1. To understand the concept on stability of retaining walls
69	Earth Retaining Structures	CO2. To impart knowledge on concepts of sheet piles, braced
		cuts and cofferdams.
	Design and Drawing of	CO1. To impart design concepts relating to various structures
70	Irrigation Structures	CO2. To familiarize in the design and drawing of hydraulic
		structures such as surplus weir, canal regulator, trapezoidal
		CO1. To familiarize with programming languages to solve the
	Computer Applications in Civil Engineering Lab	civil engineering Problems.
		CO2. To introduce the concept of designing structures by using
71		software.
		CO3. To impart the knowledge on Arc GIS software in solving
		civil engineering Problems.
		CO1. To familiarize with the damages of RC buildings and
		masonry buildings due to earthquakes
	Seismic Resistant Design of Structures	CO2. To introduce the concepts on analyzing of earthquake
72		resistant structures
		CO3. To impart knowledge on seismic soil- structure
		interaction and reliability analysis
		EEE
S.No.	Course Name	Course Outcomes
9.110.		

		CO 1. most with a magnetic line descent of floor
		CO 1: speak with a reasonable degree of fluency using
		communication strategies as well conventions of politeness and
		courtesy
		CO 2: speak with a reasonable degree of fluency and accuracy
		in contexts requiring tasks such as narrating and describing.
		CO3:listen to short audio and video clips .
		CO4:read fluently comprehending texts of different kinds using
1	Functional English	multiple strategies to understand explicitly-stated information as
1		well as underlying meaning.
		CO5: write coherent paragraphs with attention to elements of
		writing such as content, organization, language, style and
		mechanics and the conventions of academic writing.
		CO6: write survey reports with attention to conventions of
		report writing.
		CO7: guard against mistakes Indians typically make in their
		speech and writing in English.CO1: solve the system of linear equations in various
		-
		engineering problems.
		CO2: evaluate the eigenvalues and eigenvectors.
2	Lineer Algebra and Calculus	CO 3: solve linear ordinary differential equations
2	Linear Algebra and Calculus	CO4: apply the techniques of partial differentiation in
		optimization problems and solve first order partial differential equations.
		CO5: compute areas and volumes using double and triple
		integrals
		CO1: explain the electro chemistry of batteries and sensors
	Applied Chemestry	CO2: discuss various techniques used in making of thin films,
		properties and applications of nanomaterials
		CO3: explain the properties and applications of polymers used
		in making of electronic devices
3		CO4:solve the numerical problems on hardness of water,
		discuss the boiler troubles and explain water treatment methods
		and their significance in industry and daily life
		CO5: interpret the spectral data to analyse the structure of
		simple molecules
		CO 1: Outline problem solving steps and solve sample
		problems.
		CO 2: Use control statements for writing the programs.
	Problem Solving Using C	CO 3: Apply the concepts of arrays, strings and pointers in
4		problem solving.
		CO 4: Decompose a problem into functions to develop modular
		reusable code.
		CO 5: Use structures and files for efficient handling of data.
L	1	

		CO1:be aware of themselves and surroundings
		CO2:be responsible in life
		1
	Universal Human Values 2:	CO3:develop personality to be happy continuously and prosper
5	Understanding Harmony	CO4:handle the problems with sustainable solutions
	6 5	CO5:possess human nature in mind
		CO6:apply what they have learnt to their own self in real life
		situations
		CO1: give short impromptu speeches with confidence and
		fluency.
		CO2: take part in conversations in different functional contexts
		using English
		following appropriate communication strategies.
		CO3:use conventions of politeness and courtesy in speech and
		enhance the
		effectiveness of their communication in English.
		CO4: articulate the sounds of English (vowels, consonants, and
		diphthongs) with
		accuracy.
6	Functional English Lab	CO 5:check the pronunciation of words in a dictionary using
		their knowledge of
		phonemic symbols.
		CO6: pause at appropriate places in their speech in English,
		enhancing thereby
		the comprehensibility of their communication.
		CO7: speak English with adequate attention to stress, rhythm,
		and intonation.
		CO 8:speak without their pronunciation being marred by
		regional peculiarities, achieving thereby greater intelligibility in
		their communication with non-Telugu
		speakers of English.
		CO1: perform quantitative analysis by using chemical and
		instrumental methods.
		CO2: operate the pH meter, conductivity meter for analyzing the
		water quality. CO3: analyze the corrosion rate of a given metal in a given
7	Applied Chemistry Lab	environment by gravimetric
		method.
		CO4: prepare printed circuit board by electroless plating.
		CO5: synthesize polymers and obtain cell potential by
		construction of an electrochemical cell.
		CO1: understand history and philosophy of constitution with
		reference to Preamble,
		Fundamental Rights and Duties
	I	

8	Constitution Of India	CO2: understand the concept of Unitary and Federal Government along with the role of President, Prime Minister and Judicial System. CO3: structure of the state government, Secretariat, Governor and Chief Minister and their functions. CO4: learn local administration viz. Panchayat, Block,
		Municipality and Corporation. CO5: learn about Election Commission and the process and about SC, ST, OBC
		and women.
		CO1:speak with a reasonable degree of fluency and accuracy in professional communication situations.
		CO2: add to the effectiveness of their oral communication by using communication strategies, conventions of politeness and
		courtesy, and stress and intonation.
		CO3:listen to short audio and video clips in native English
		accent and gain both understanding of messages and sensitivity
9	Professional Communication	to native speaker accents.
		CO4:read fluently, comprehending texts of different kinds using
		multiple strategies and higher-order skills.
		CO5:produce written discourses of different kinds with
		attention to elements of writing such as content, organization,
		language, style and mechanics.
		CO6: guard against grammatical errors Indians typically make
		in their speech and writing in English.
		CO1: evaluate improper integrals using Laplace Transforms
	Integral Transforms and Vector Calculus	CO2: apply Laplace transforms to find the solutions of initial
		and boundary value problems
		CO 3: find the Fourier series representation of a function in one
10		variable and apply Fourier transform in various engineering
		CO4: apply the concepts of vector differentiation in their
		engineering fields CO5: verify the relation between line, surface and volume
		integrals using integral theorems
		CO1: explain construction and working of laser
		CO2: relate the principles of propagation of light in optical
	Solid State Physics	fibers for applications in communications
11		CO 3: differentiate classical , quantum free electron theories
11		CO4: identify conductivity mechanism in semiconductors
		CO5: Interpret polarization in dielectrics and magnetic
		properties of materials
	I	11 1

		CO1: apply various circuit laws to analyze the electrical circuits.
		CO2: solve electrical networks using the principles of network topology.
12	Circuit Theory - I	CO3: analyze the steady state behavior of DC and AC circuits,
12	Circuit Theory - I	CO4: analyze the behavior of electrical resonance
		CO5: apply network theorems to analyze and design the
		electrical circuits.
		CO6: apply the concepts of magnetic circuits to various
		Physical Systems.
		CO1 : Verify whether the set of statements gives a valid
		conclusion or not
		CO2 : Draw Hasse diagram and verify whether a given lattice is
13	Discrete Mathematics	distributive or modular
		CO3 : Analyse different types of the algebraic structures
		CO4: Use the concepts of graph theory in analysing electrical
		circuits CO5 : Solve the recurrence relations
		CO1: construct polygons and conic sections. CO: draw projections of points, lines, planes and solids in
14	Engineering Drawing	different positions.
11	Engineering Drawing	CO3: draw orthographic and isometric views of different parts.
		CO1: enhance the effectiveness of their communication through body language;
		CO2: take part in interactional communication (i.e.
		communication that serves the
		purpose of social interaction or small talk) with fluency
		CO3: take part in transactional communication (i.e.
		communication that serves the
		purpose of carrying out functions such as giving directions,
		complaining, and
		apologizing) with fluency
		CO4: speak professionally in telephone conversations
		CO5: make effective presentations using a range of strategies,
		including a good
15	Professional Communication Lab	organization of the content, impressive opening and closing, the use of suitable
		visual aids, the use of stories/anecdotes to illustrate a point,
	I	CO6: take part in group discussions and debates successfully

		CO7: answer questions at an elementary level in job interviews (e.g. Can you tell us something about yourself? What kinds of things do you worry about? What are your key skills? What skills do you need to improve? What do you see as your strengths? What do you like doing in your spare time? How would you describe the way you work? Tell us about a time when you showed strong leadership skills. Tell us about a time when you had to make a difficult decision. How do you see yourself in five years' time?) CO8: use team-building skills with impact in different situations
16	Solid State Physics Lab	 CO1:identify the semiconductor from the obtained energy gap and Hall coefficient CO2:draw characteristic curves to estimate thermal coefficient of a thermistor. CO3:verify magnetic field along the axis of a circular coil. CO4: 4. recognize the coercivity and retentivity from B-H curve
		CO5:determine dielectric constant of a dielectric material CO6: 6. calculate light gathering power of optical fiber and bending losses CO7:estimate wavelength of unknown light source
17	Environmental Studies	 CO1: create awareness among the people in protection of environment. CO2: analyze structure and functional attributes of an ecosystem. CO3: explain the values of biodiversity CO4: identify the sources of environmental pollution, assess their effects and suggest suitable control measures. CO5: adopt sustainable waste management practices
18	Python Programming	CO1: solve coding tasks related to fundamental and control statements CO2: design structured programs using functions CO3: differentiate mutable and immutable data types. CO4: understand and apply the concepts of exceptions and file handling. CO5:analyze the importance of object-oriented programming over structured programming
19	Circuit Theory-II	CO1: Evaluate different two port network parameters.CO2: Analyze three phase circuits with both balanced and unbalanced loads.CO3: Analyze the transient behavior of R-L, R-C and R-L-C circuits for different excitations

	1	CO4: Synthesize the given network using Foster form or Cauer
		form of realizations
		CO1: Develop mathematical models for physical systems.
		CO2: Employ the time domain analysis to quantify the
		performance of linear control systems and specify suitable
		controllers.
20	Control Systems	CO3: Quantify time and frequency domain specifications to
		determine stability margins.
		CO4: Apply state variable theory to determine the dynamic
		behavior of linear control systems.CO1: enumerate constructional details, principle of operation
		and the performance of D.C.machines for various operating conditions
		CO2: suggest suitable starting, speed control and testing
01	DC Machines And	methods of D.C. motor for various applications
21	Transformers	CO3: describe the operation of single phase and three phase
		transformers for various operating conditions
		CO4: find the performance specifications of a single-phase and
		three phase transformer for various loading conditions.
		CO5: select suitable type of single phase and three phase
		transformers for various applications.
		CO1: Identify V-I characteristics of Diodes, BJT, MOSFET
	Electronics Devices And	CO2: analyze the biasing circuits of BJT and MOSFETs.
22	Circuits	CO3: develop small signal models for BJT and MOSFET. \Box
		CO4: Differentiate various Feedback connection types
		CO5: design oscillator circuits using BJTs
	Digital Circuits	CO1: perform conversion between different number systems
		CO2: realize Boolean expressions using k-maps
23		CO3: design combinational logic circuits.
		CO4: apply different models of Finite State Machines (FSM) for
		design of synchronous sequential circuits.
		CO5: implement registers and counters using flip-flops.
		CO1: Identify various electronic components and basic
		electronic measuring instruments and other lab equipment
		CO2: Verify the I-V characteristics of junction diode, zener
24	Electronic Devices and	diode, MOSFET, BJT.
27	Circuits Lab	CO3: Test the Zener voltage as voltage regulator, BJT voltage-
		divider bias and using it as an amplifier.
		CO4: Verify the functionality of feedback amplifiers and
		oscillator circuits.
		CO1: apply Boolean laws and K-map to simplify the digital
	Digital Circuits Lab	circuits.
25		CO2: draw the digital circuits using gate level implementation.
/ \	idigital Cilcuits Lad	CO3: demonstrate the flow of Electronic Workbench

		CO4: develop digital circuits using Electronic Workbench
		CO5: make oral presentations and prepare written reports
		CO1: demonstrate various commands in MATLAB
		programming
		CO2: apply appropriate numerical technique to find root of an
		equation through MATLAB
		CO3: Demonstrate the use of interpolation methods, determine
26	Numerical Methods With	approximate derivatives by using appropriate numerical
20	Computer Applications	techniques with MATLAB
		CO4: Evaluate integrals ,determine numerical solution of an
		ODE by using appropriate numerical techniques with MATLAB
		ODE by using appropriate numerical techniques with MATLAB
		CO5: fit a curve for the given data using MATLAB
		CO1: enumerateconstructional details, principle of operation
		and the performance of three-phase and single-phase induction
		motors
		CO2: suggest various starting/speed control methods of three-
	La hasting And Samahana and	phase induction motor for various applications
27	Induction And Synchronous Machines	CO3: elucidate the construction and operation of synchronous
	Machines	machines
		CO4: determine the performance of synchronous machines
		under various operating conditions
		CO5: analyze effect of various parameters on the load sharing
		between alternators in parallel
		CO1: Describe the working of a thermal power station.
		CO2: Identify different components of a nuclear power station .
	Power Generation Systems	CO3: Illustrate the working principle and operation of hydro
28		and gas power plants
20		CO4: Elucidate the process of power generation by solar and
		wind energy
		CO5: Enumerate various economic aspects of power generation
		CO1: Classify the signals and various operations on signals
	Signals and Systems	CO2: Perform Fourier analysis on the signals
		CO3: Analyze the various systems
29		CO4: Perform correlation operational on signals
29		CO5: Apply the various sampling techniques on continuous
		time signals
		CO6: Analyze the various continuous time signals through
		transformation (Fourier and Laplace) techniq
		CO1:describe the properties of liquid, gaseous and solid

		CO2: analyze the properties of Ferro electric, Peizo electric and Pyro electric materials
30		•
	Electrical Materials	CO3: classify different magnetic materials and examine the
		effects of aging and impurities on magnets CO4: elucidate various semiconductor materials and their
		applications in integrated circuits.
		CO5: choose appropriate material for a given electrical and
		special purpose application
		CO1:Apply the basic concepts, properties of feedback and
		mathematical modeling of control systems and frequency
		domain approach to engineering systems.
		CO2:Explore the transfer function analysis using signal flow
		graph representation of control systems
31	Control Systems Engineering	CO3:Employ the time domain analysis to quantify the
		performance of linear control systems to identify suitable
		controller
		CO4:Perform frequency domain analysis of control systems
		required for stability analysis
		CO5:Use the concept of state variable theory to determine the
		dynamic behavior of linear control systems
		CO1:Select the appropriate apparatus for determining the
		performance of DC machines and transformers based on the
	DC Machines And	capacity experimentally
32	Transformers Lab	CO2:Determine the equivalent circuit parameters of
		transformers experimentally
		CO3:Compute the performance characteristics of transformers
		and DC machines through suitable tests.
		CO1:verify the applicability of network theorems to practical
	Electrical Circuits Lab	electrical circuits
		CO2:specify and test RLC series and parallel resonant circuits
33		CO3:evaluate the two port parameters for a two port network
		CO4:interpret /correlate physical observations and
		measurements involving electrical
		circuits to theoretical principles
		CO1:Analyze the behaviour of the passive circuits and verify
		network theorems using MATLAB.
	Simulation of Electrical	CO2: Design and model the electrical systems in simulation
34	Engineering Systems	environment.
	Engineering Systems	CO3: Develop electrical systems using MATLAB/SIMULINK
		Tool
		CO 1: describe the operation and range extension of various
		types of ammeters and voltmeters
	I	

35	Electrical Measurements and Instrumentation	CO 2: describe the operation and range extension of Watt meter, and operation of Energy Meter and its Calibration. CO3:determine the parameters of electrical circuits using potentiometer, suitable bridges and also calibrate the measuring instruments CO4:select a suitable transducer for measuring non-electrical physical quantities.
36	Power Transmission Systems	 CO5: analyse the operation of various digital meters CO 1: estimate the inductance for different conductor configurations of transmission lines. CO 2: calculate the capacitance of transmission lines for different conductor configurations. CO3:determine the performance of short, medium and long transmission lines. CO4:select a suitable insulator for given specifications of the line and illustrate the effect of corona. CO5: evaluate the sag of a transmission line under the effect of wind and ice.
37	Analog and Digital IC Applications	 CO 1: analyze the characteristics of op-amps. CO 2: apply op-amps concepts for various applications. CO3:understand A to D and D to A Conversion techniques. CO4:design various combinational and sequential circuits using MSI ICs. CO5: understand different types of memories and timing signals.
38	Electrical Distribution Systems	CO 1: describe various load models in the distribution systemCO 2: describe the primary feeder ratings and voltage levels of primary feederCO3:design an optimum location of the substationCO4:analyze various protective devices in the distribution system for coordination processCO5: select appropriate voltage control method in the distribution systems
39	Advanced Control Systems (Professional Elective - I)	 CO 1: design a controller for linear systems using frequency dom CO 2: develop different canonical forms to examine controllabilitie CO3: describe the behavour of non-linear systems. CO4: determine the stability of a given systems using Lypunov's to CO5: design a state feedback controller and/or observer.
40	Engineering Electro Magnetics (Professional Elective - I)	CO 1: determine electric field for symmetrical charge configurations. CO 2: estimate Potential and capacitance of a parallel plate capacitor with composite dielectrics CO3:compute magnetic fields for symmetric current distributions.

1	1	
		CO4:apply ampere's law to determine magnetic field and
		compute the self-inductance of solenoid and toroid
		CO5: apply maxwell's equations for time variant fields.
		CO 1: create, modify and work with variables and its related
		operations
		CO 2: develop MATLAB program to solve real time
		engineering problems.
41	Modeling And Simulation Of	CO3:solve and visualize the dynamic performance of
	Engineering Systems	engineering systems through MATLAB plotting features.
		CO4:compute and analyze the numerical data of a physical
		system using advanced features in MATLAB.
		CO5: analyze the performance of physical system using
		toolboxes and GUI.
		CO 1: compute the characteristics of d.c. servo motors, a.c.
		servo motors, synchros.
		CO 2: employ p, pi, pd and pid controllers, lag, lead and
		lag-lead compensators for process control systems.
40		CO3:determine the transfer function of d.c. motor and d.c.
42	Control Systems Lab	generator.
		CO4:verify the truth tables of logic gates, simple boolean
		expressions using programmable logic controller.
		CO5: apply the programming skills to analyze the behavior of
		linear control system using MATLAB/Simulink environment.
		CO 1: estimate the performance of induction motors and
		synchronous machines.
		CO 2: describe the operational behavior of the induction motor
40		under various loading conditions.
43	AC Machines Lab	CO3:determine the parameters of synchronous machine.
		CO4:operate an alternator in parallel with infinite bus bar.
		CO5: find operational characteristics of three phase transformer.
		CO 1: develop the fundamental knowledge and demonstrate
		various electrical measuring instruments.
		CO 2: co-relate the theoretical knowledge with the practical
		electrical measuring system.
		CO3:standardize various measuring instruments with the help of
		standard meters.
		CO4:measure unknown values of resistance, inductance and
		capacitance by balancing the bridges.
		CO5: measure various physical quantities using appropriate
44	Electrical Measurements And	transducers.
	Instrumentation Lab	MICROPROCESSORS, MICROCONTROLLERS AND ITS
		CO 1: identify a detailed s/w & h/w structure of the
		microprocessor and microcontroller

	I	CO5: choose the appropriate energy management strategies for
		various applications
		CO 1: describe the components of digital control systems.
		CO 2: evaluate the Z- Transforms and mathematical models of
		linear discrete-time control systems using pulse transfer
		functions.
49	Digital Control Systems	CO3:determine the stability of digital control systems.
17	Digital Control Systems	CO4:employ the state-space models and tests for controllability
		and observability.
		CO5: design a state feedback controller for the desired
		specifications.
		CO 1: describe the constructional and operating principles,
		control schemes and applications of various types of Stepper
		Motors.
		CO 2: explain the constructional details, working principles,
		control practices and applications of Switched Reluctance
		Motors.
		CO3:analyze the speed-torque characteristics, construction and
50	Principles of Special Electric	principle of operation, control techniques and applications of
	Machines	Permanent Magnet Brushless D.C. Motors .
		CO4:acquire the knowledge of operating principles,
		constructional details and applications of Servomotors and
		Tachometers.
		CO5: compare the constructional details, principle of operation
		and applications of various single phase special electrical
		machines.
		CO 1: analyze various types of signals, and errors in digital
		instruments.
		CO 2: measure various parameters like amplitude, phase and
	Electrical Instrumentation	frequency of a signal using CRO
51		CO3:select a suitable transducer working on electrical principles
		to measure non electrical quantities
		CO4:select a suitable transducer working on non-electrical
		principles to measure physical parameters
		CO5: analyse the operation of various digital meters
		CO 1: Acquire the knowledge of assembly language
	Microprocessors	programming using 8086 microprocessor.
52	Microprocessors, Microcontrollers And Its Applications Lab	CO 2: Perform various arithmetic and shift operations with
		8086 based system.
		CO3:Interface various I/O modules with 8086 based system.
		CO4:Implement various real time applications using 8051.
		CO 1: Interface different sensors to Arduino/ Raspberry Pi
	Automation Of Electrical	CO 2: Interface Bluetooth to Arduino/ Raspberry Pi and
53	Systems Using IoT (Skill	communicate data to Smartphone.

	Development Course)	CO3:Operate a motor, relay, monitor data and detect faults using IoT.
		CO4:create servers for IoT applications.
		CO 1: describe various electric heating methods.
		CO 2: identify a suitable welding method for a given
		application.
54	Utilization of Electrical	CO3:design illumination systems for residential, commercial
54	Energy	and industrial environments.
		CO4:analyze various speed time curves of electric traction.
		CO5: determine the tractive effort, power and specific energy
		consumption of electric traction.
	Digital Image Processing	CO 1: review the fundamental concepts of a digital image
	(Professional Elective - III)	processing system.
		CO 2: evaluate the techniques for image enhancement
55		CO3:differentiate various image restoration techniques.
		CO4: interpret image segmentation and representation
		techniques.
		CO5: categorize various compression techniques
		CO 1: distinguish the signals, perform various operations on
		signals and process signals in the discrete domain.
		CO 2: compute the Fourier series coefficients and z-transform
	Digital Signal Processing	of discrete time signals.
56	Digital Signal Processing (Professional Elective - III)	CO3:apply various transform techniques on discrete time
	(1 totessional Lieetive - III)	signals.
		CO4:designIIR filters for a given specifications.
		CO5: Categorize various windowing techniques to design FIR
		filters.
	Principles of VLSI Design (Professional Elective - III)	CO 1: dissimate various IC fabrication technology and various
		electrical properties of MOS, CMOS and BiCMOS circuits.
		CO 2: realize various logic circuits using nMOS, CMOS, and
57		BiCMOS logic.
		CO3:apply scaling models to MOS circuit
		CO4:design subsystem components using different logic styles
		in CMOS
		CO5: construct CMOS static and dynamic circuits
		CO 1: characterize the behaviour of CMOS inverter
	CMOS Digital IC Design (Professional Elective - III)	CO 2: design various combinational and sequential circuits
5 0		using CMOS logic
58		CO3: identify different components contributing to delay offered
		by interconnects
		CO4:design complex digital circuits
		CO5: design memory based array structures.

		CO 1: evaluate optimal generation schedule with and without
		losses and to compute loss coefficients and transmission losses
		CO 2: find the solution for short term hydrothermal scheduling
	Power System Operation And	problems.
59	Control	1
59	(Professional Elective - IV)	CO3:determine the steady state changes in frequency in single
		area load frequency control.
		CO4:determine the steady state changes in frequency in two
		area load frequency control.
		CO5: suggest suitable voltage control method for different
		applications.
		CO 1: select an appropriate converter for speed control of dc
		drive to meet the requirements of application in Industry
		CO 2: describe the operational characteristics of DC drive in all
		four quadrants.
60	Power Semiconductor Drives	CO3:analyze the concepts of Chopper controlled DC drives.
60	(Professional Elective - IV)	
		CO4:select an appropriate speed control method for Induction
		motor drive to meet the requirements of application in Industry.
		CO5: select an appropriate speed control scheme for
		Synchronous motor drive to meet the requirements of
		application in Industry
		CO 1: demonstrate the knowledge and understanding of
		constructional details, working principles and control practices
		and applications of Switched Reluctance Motors
		CO 2: describe the operating principles, constructional details
		, phasor diagram, voltage , torque equation and applications of
		Synchronous Reluctance Motors
	Special Electrical Machines	CO3:analyze the speed-torque characteristics , construction and
61	(Professional Elective - IV)	principle of operation ,control and applications of Permanent
		Magnet Brushless D.C. Motors
		CO4:demonstrate the types of stepper motors ,constructional
		and operating principles ,control schemes and applications of
		various Stepper Motors
		CO5: explain the importance of various linear motors,
		constructional details and principle of operation and
		applications of linear motors
		CO 1: analyze the behavior of gases, liquid and solid dielectric
	High Voltage Engineering (Professional Elective - V)	material under different circumstances.
		CO 2: expound principles of theory of high voltage generation
62		and impulse currents
02		CO3:expound principles of theory of measurement of high
		voltages and currents.
		CO4: identify the testing techniques for high voltage apparatus.
1	•	

		CO5: apply the high voltage engineering to industry.
		CO 1: demonstrate the role of FACTS devices for enhancing
		power handling capacity in the transmission network.
	Flexible Ac Transmission	CO 2: apply the knowledge of voltage source converters and /
(2)	Systems	or current converter in FACTS concepts
63	(Professional Elective -V)	CO3:demonstrate the knowledge of static shunt compensation
		using various FACTS devices.
		CO4:describe the operation of SVC and STATCOM
		CO5: select suitable controller of series compensation
		CO 1: describe fundamental principles of Artificial Intelligent
		Techniques (AIT).
	Introduction to Artificial	CO 2: explain learning tasks and algorithms for Neural
	Intelligence Techniques	Networks
64	(Professional Elective -V)	CO3: analyze different architectures of artificial neural
	(1 Tolessional Elective - V)	networks and/or discuss ANN applications.
		CO4:create, analyze and work with fuzzy sets.
		CO5: design fuzzy logic controller for an appropriate system
		with fuzzy logic components
		CO 1: apply managerial economic concepts in business decision
		making and identify the influencing factors of demand for a
	Engineering Economics And Project Management	product.
		CO 2: categorize production with respect to time and cost.
65		CO3:relate the market structures and pricing to a product
		CO4:establish the suitable business organization with available
		resources.
		CO5: plan and evaluate a project and also apply network
		concepts
		CO 1: Carryout experiments ensuring the safety of equipment
	Power Systems Lab	and personnel.
		CO 2: Determine the sub transient reactance of a Salient Pole
		Machine
		CO3:Verify the characteristics of the over voltage and over
66		current relay
		CO4:Plot the characteristics of PV Module in the laboratory
		environment
		CO5: Analyze the load flow for a given power system by using
		Gauss seidel method.
		CO6: Verify the load frequency control of single area system
		with and without controller.
		CO 1: plot the characteristics of various power semiconductor switches
		CO 2: trigger the SCR using various methods
67	Power Electronics Lab	CO3:analyze and test the operation of simple power electronic circuits
		circuits

1	1	CO4:operate the given drive in all four quadrants
		CO5: analyze the performance of PWM converter
		CO6: perform closed loop control of DC motor
		CO 1: draw the circuit diagram of Godown wiring
		CO 2: draw the single line diagrams of substations
	Computer Aided Electrical	CO3:design the dimensions of the DC machines
68	Drawing	CO4:draw the sectional views and line diagrams of single phase
		transformers and Induction Machines.
		CO5: draw the transmission tower diagrams
		ME
S.No.	Course Name	Course Outcomes
		CO1.listening to (and viewing) classroom lectures and other
		academic presentations with a reasonable degree of accuracy,
		understanding, and appreciation, and responding to them
		appropriately;
		CO2. speaking in academic (e.g. classroom discussions) and
		social contexts with a fair degree of fluency, accuracy and
		intelligibility, and with due attention to factors such as purpose,
		audience, context, and culture;
		CO3. reading a wide range of informational and functional
1		texts, including coursebooks and reference materials, from print
1	Functional English	and non-print sources and usingthem for a variety of purposes;
		and
		CO4.writing for academic purposes (e.g. assignments,
		examination answers) in an organized way following the rules
		of discourse and using vocabulary and grammar appropriately
		and accurately; and
		CO5.To develop in them the communication strategies and
		social graces necessary for functioning effectively in social,
		academic, and other situations in which they may be called upon
		to use English.
		CO1.To understand the procedure to solve the system of linear
		equations
		CO2.To know the method for finding eigenvalues and
		eigenvectors.
2		CO3.To familiar with the knowledge of differential calculus to
	Linear Algebra and Calculus	support their concurrent and subsequent engineering studies.
		CO4. To know how to find maxima and/or minima for a given
		surface
		CO5.To understand the methods to evaluate areas and volumes
		using integrals.
		CO1.To impart the concept of periodic motion.
2	Physics for Engineers	CO2.To apply principles of optics for engineering applications
• •	POWERCE INF HOMODOR	

J	1 IIYSIUS IOI EIIGIIUUIS	CO3.To analyze crystal parameters to investigate crystal
		structures.
		CO4.To explore various Non Destructive Techniques.
		CO1.To emphasize the use of flowcharts and pseudo code in pro
4	Problem Solving Using C	CO2.To apply C Programmingin problem solving
		CO1.To highlight the significance of universal language of
		engineers
5	Engineering Graphics	CO2.To introduce the concepts of drawing 3-D objects in 2-D
		planes.
		CO3.To impart computer aided drafting skills.
6	Functional English Lab	CO1.Functional English (Lab) seeks to develop in the students the communication strategies and social graces necessary in order to function effectively in social and other situations in which they may be called upon to speak in English; and CO2. It seeks to develop in them a greater awareness of English pronunciation and provides for focused practice with the sounds of English and intonation patterns improve their pronunciation skills and to enable them to speak with a reasonable degree of intelligibility.
		CO1. To make the students gain practical knowledge to co-
		relate with the theoretical studies
	Engineering Physics Lab	CO2. To impart skills in measurements.
7		CO3. To design and plan the experimental procedure and to record and process the
		results.
		CO1. To impart the basic knowledge about the environment and
8	Environmental Studies (Mandatory Non-Credit	ecology CO2.To develop an attitude of concern for biodiversity and its conservation
	Course)	CO3. To create awareness on environmental pollution and
		waste management.
9	Professional Communication	CO1.To equip the students with common employability skills (the skills required for gaining employment and performing successfully in different careers) which can enable them to perform communication tasks of increasing length and complexity.
		CO2. To develop in them the interactional communication strategies and social graces which have the potential to add to the effectiveness of professional communication.
10	Integral Transforms and	CO1. To gain the knowledge of Laplace and inverse transforms To gain the knowledge of Laplace and inverse transforms

10	Vector Calculus	CO2.To understand the concepts of Fourier series and Fourier
		Transforms
		CO3:To know about vector differentiation and integration.
11	Chemistry for Engineers	CO1. To impart knowledge of electrochemical energy systems, corrosion and its prevention and water treatment methods.CO2. To impart the knowledge of chemical methods of synthesis and analysis of plastics, nanomaterials, fuels and lubricants.
12	Engineering Mechanics	 CO1. To impart the basic concepts of force systems, free body diagram and equilibrium conditions and effect of friction in various systems. CO2.To familiarize with the calculation of the geometric properties like centroid, centre of gravity, moment of inertia of various sectional areas and bodies. CO3. To develop the knowledge on basic principles of kinematics and kinetics of a particle and rigid bodies.
13	Universal Human Values 2: Understanding Harmony	 CO1. To help students understand the need, basic guidelines, content and process of value education. CO2. To help students initiate a process of dialog with in themselves to know what they really want to be in their life and profession CO3. To facilitate the students to understand harmony at all the levels of human living, and live accordingly. CO4. To understand the harmony in nature and existence. CO5. To facilitate the students in applying the understanding of harmony in existence in their profession and lead an ethical life.
14	Professional Communication Lab	CO1. Professional Communication (Lab) is a career-oriented programme. It seeks to develop in the students the competence required to perform professional communication tasks of increasing length and complexity, which can help them secure employment and perform successfully in their careers.
15	Engineering Workshop	CO1.To impart hands-on training on basic engineering trades.
16	Engineering Mechanics Lab and Fules & Lubricants Lab	CO1. To impart knowledge on basic engineering applications
	Constitution of India	 CO1.To impart knowledge on basic engineering applications. CO2.To enable the student to understand the importance of constitution. CO3.To understand the structure of Executive, Legislature and Judiciary.

17	(Mandatory Non-Credit Course)	CO4.To understand Philosophy of fundamental rights and duties.
		CO5. To understand the autonomous nature of constitution bodies like SupremeCourt and High Court Controller and
		Auditor General of India and ElectionCommission of India.
		CO6.To understand the Central and State relation, financial and
		administrative.
		CO1. To introduce Scripting Language.
		CO2. To explore various problems solving approaches of
18	Python Programming	computer science
		CO3. To be familiarized with general coding techniques to
		solve object-oriented programming concepts
		CO1. To introduce the basic concepts of electrical circuits
		CO2. To familiarize with the constructional details, working
19	Elements of Electrical and	principles of DC and AC machines.
	Electronics Engineering	
		CO3. To familiarize with the operation of diode and transistors
		CO1.To introduce the laws of thermodynamics and their
		applications to various thermodynamic processes and cycles.
20	Engineering	CO2. To familiarize with various thermodynamic properties of a
	Thermodynamics	pure substance and the laws governing the ideal gases and their
		mixtures
		CO1. To familiarize with the concepts of kinematic analysis of
21	Kinematics of Machines	mechanisms.
22		CO1. To impart knowledge on behavior of mechanical
22	Mechanics of Solids	elements under the action of different loads.
		CO1. To familiarize with the fundamentals of solidification,
23	Materials Engineering	phase diagrams, heat treatment and properties of metallic and
		non metallic materials.
		CO1. To conduct tests on various electrical & electronic
24	Electrical and Electronics	circuits and to familiarize experimental procedures of those
	Engineering Lab	Circuits.
		CO1. To impart hands on training to examine the mechanical
25	Mechanics of Solids Lab and	properties of materials
25	Materials Lab	CO2. To impart hands on training in preparation of metal
		specimen so as to observe the microstructure
26	Numerical and Statistical	CO1.To introduce the concepts of numerical and statistical
26	Methods	methods for solving engineering problems.
27	Manufacturing Science	CO1. To introduce the principles of manufacturing Science to
27	Manufacturing Science	convert materials into desired shapes and sizes.
		CO1. To introduce the principles of operation of I.C engines
28	Applied Thermodynamics	and compressors and their performance metrics.
		cycles and air conditioning processes

		CO1. To introduce the fluid properties, basic laws, principles of conservation of
29	Fluid Mechanincs and	mass, momentum and energy and their application in the study
29	Hydraulic Machines	of fluid flow.
		CO2. To introduce the principles of hydraulic turbines and
		pumps, along with their performance characteristics.
30	Advanced Mechanics of	CO1. To familiarize with the concepts of stresses and strains in
30	Solids	un-symmetric bending and torsion using classical methods.
		CO1. To expose the students to the mechanics of metal
		cutting, so as to equip them with adequate knowledge about
31	Metal Cutting and Machine	elements of metal cutting process.
51	Tools	CO2. To emphasize upon the prominent theories, concepts and
		constructional features of machine tools related to turning,
		shaping, planning, drilling, milling and grinding operations
		CO1. To familiarize the learner with the concepts of Industrial
		Engineering and its
32	Industrial Engineering	tools to enhance productivity of the systems
52		CO2. To introduce the principles and techniques for effective
		project
		managementand personal management.
		CO1. To introduce and analyze the Rankine steam power cycle
		and basic
		components of steam power plant such as boilers, nozzles,
33	Steam and Gas Turbines	condensers and
55		turbines.
		CO2. To familiarize with the analysis of gas turbine cycles and
		introduce the principle
		of operation of jet and rocket engines
		CO1. To introduce various automobile systems such as
	Automobile Engineering	transmission, steering,
34		suspension, braking and safety systems.
		CO2. To familiarize with combustion in SI and CI engines,
		emission control
		techniques, electric and hybrid vehicles.
a -		CO1. To familiarize with the concepts of various NDT
35	Non Destructive Testing	techniques to identify the
		defect in a mechanical component.
2.5		CO1. To familiarize with the concepts of mathematical model
36	Mechanical Vibrations	and solution methods
27		for vibrations of the mechanical systems
37	Operations Research	CO1. To impart the concepts of operations research
		CO1. To impart the concepts of force analysis of mechanisms

38	Analysis and Synthesis of Mechanisms	CO2.To familiarize with the concepts of synthesis of mechanisms.
		CO3. To impart hands on training on analysis and synthesis of mechanisms using
		software packages
	Artificial Intelligence and	CO1. To familiarize with the concepts of Artificial Intelligence
39	Machaine Learning	and Machine Learning.
	8	8
		CO1. To instruct the principles of interchangeable manufacture.
40	Measurements and	CO2. To introduce basic principles of mechanical
	Mechatronics	measurements.
		CO3. To impart knowledge on mechatronics systems.
4.1	Artificial Intelligence and	CO1. To familiarize with the concepts of Artificial Intelligence
41	Machaine Learning	and Machine Learning.
		CO1. To introduce modes of heat transfer and their
42	Heat Transfer	significance in the design of
		heat transfer equipment.
		CO1. To impart the knowledge of the basic engineering design
43	Design of Machine Elements	against static and
		fluctuating loads by considering strength and rigidity.
		CO1. To impart knowledge on non-conventional sources of
		energy and techniques
	Non Conventional Sources of Energy	used in exploiting solar, wind, tidal and geothermal sources of
44		energy and
		biomass.
		CO2. To introduce direct energy conversion systems such as
		thermo electric, MHD
		and Fuel Cells.
45	Automation in Manufacturing	CO1. To introduce various strategies of automation in
		manufacturing.
		CO1. To familiarize with the concepts of finite element method
46	Finite Element Method	for structural, thermal
		and dynamic analysis.
		CO1. To familiarize with the concepts of quality management
47	Quality Governance	and total quality
		Management
		CO1. To familiarize with the basic concepts of fracture
48	Fracture Mechanics	mechanics and its
		applications.
		CO1. To present the role of computers and technology that
49	CAD / CAM	drives the modern
		industry.

	Design of Transmission	CO1. To familiarize with the design of various machine
50	Elements	elements for effective power
		transmission.
	Design of Heat Transfer	CO1. To introduce basic methods of design of heat exchangers
51	Equioment	CO2. To familiarize with the design procedures of various heat
	1	transfer equipment.
		CO1. To familiarize with anatomy, kinematics, sensors and
52	Robotics	dynamics of a
		programmable machine, robot.
		CO1. To familiarize with the selection of lubricating system for
		different machine
53	Tribology	components.
		CO2. To impart knowledge on design of bearings for a given
		application.
	Computational Fluid	CO1. To solve fluid flow/ heat transfer problems by the
54	Dynamics	application of finite difference
		and finite volume methods.
		CO1. To introduce the basic cycles of various refrigeration
		systems, their
		performance evaluation along with details of system
55	Refrigeration & Air	components and
	Conditioning	refrigerantsused.
		CO2. To impart knowledge on psychrometric properties and
		processes and design
		of air-conditioning systems
56	Unconventional Machining	CO1. To impart the principles of non-traditional machining
	Processes	methods
57		CO1. To familiarize with the design factors used in
	Assembly	manufacturing and assembly.
58	Entrepreneurship	CO1. To familiarize the learner with the concepts of
		Entrepreneurship.
50	Derver Plant Engineering	CO1. To introduce the working of various power plants.
59	Power Plant Engineering	CO2. To familiarize with power plant effluents and power plant
		economics.
60	Additive Manufacturing	CO1. To present the various 3D printing technologies for
		manufacturing. CO1.To familiarize with the importance of types of
		maintenance with their limitations
61	Condition Monitoring	and the methods of condition monitoring in different industrial
		sectors.
		CO1. To emphasize the students on the objectives and
		functions of PPC department for effective running of a
62	Operations Management	Production system
1 02	Perunons management	

	I	CO2. To import the knowledge on verieve righting to 1- west
		CO2. To impart the knowledge on various planning tools used
		in PPC department.
		CO1. To impart hands on training on measuring methods and
63	Measurements and	metrology instruments and calibration of various measuring
	Mechatronics Lab	instruments.
		CO2. To train the students in PLC programming.
	Computer Aided Engineering	CO1. To impart hands on training for analysis of using analysis
64	Analysis & Manufacturing	package.
	Lab	CO2. To demonstrate the working principle and operation of
		CNC Machines
65	Mechanics of Composite	CO1. To familiarize with the composite materials and their
	Materials	mechanical behaviour
		ECE
S.No.	Course Name	Course Outcomes
		CO1. speak with a reasonable degree of fluency using
		communication strategies (i.e. using language appropriately to
		carry out functions such as greeting, requesting information,
		seeking confirmation, disagreeing) as well conventions of
		politeness and courtesy
		CO2. speak with a reasonable degree of fluency and accuracy in
		contexts requiring tasks such as narrating and describing
		CO3. listen to short audio and video clips - in standard Indian
		accent with understanding of the types listed in D (1) (a) below;
		and - in native English accent (British and American), especially
1	Functional English	clips in which the speakers or voice actors speak slowly, and
1		gain both understanding of messages and sensitivity to native-
		speaker accents
		CO4. read fluently comprehending texts of different kinds using
		multiple strategies to understand explicitly-stated information as
		well as underlying meanings
		CO5. read fluently comprehending texts of different kinds using
		multiple strategies to understand explicitly-stated information as
		well as underlying meanings
		CO5. write survey reports with attention to conventions of
		report writing
		CO6. guard against mistakes Indians typically make in their
		speech and writing in English
		CO1. solve the system of linear equations in various engineering
		CO2. evaluate the eigenvalues and eigenvectors.
2	Linear Algebra And Calculus	CO3. solve linear ordinary differential equations .
-	Linear Algeora And Calculus	CO4. apply the techniques of partial differentiation in optimizati
		CO5. solve first order partial differential equations.
		CO6. compute areas and volumes using double and triple integral

		CO1 analain the electric chamistary of hottonics and someone
		CO1. explain the electrochemistry of batteries and sensors.
		CO2. discuss various techniques used in making thin films,
		properties and applications of nanomaterials.
		CO3. explain the properties and applications of polymers used
3	Applied Chemistry	in making electronic devices.
_		CO4. solve the numerical problems on hardness of water,
		discuss boiler troubles and explain water treatment methods and
		their significance in industry and daily life.
		CO5. interpret the spectral data to analyse the structure of
		simple molecules.
		CO1. outline problem solving steps and solve sample problems.
		CO2. use control statements for writing the programs.
4	Problem Solving Using C	CO3. apply the concepts of arrays, strings and pointers in problen
		CO4. decompose a problem into functions to develop modular re-
		CO5. use structures and files for efficient handling of data.
		CO1. be aware of themselves and surroundings
		CO2. be responsible in life
5	Universal Human Values 2:	CO3. develop personality to be happy continuously and prosper
	Understanding Harmony	CO4. handle the problems with sustainable solutions.
		CO5. possess human nature in mind
		CO6. apply what they have learnt to their own self in real life situ
		CO1. identify, test various passive and active electronic compone
		CO2. assemble, test and troubleshoot the circuits using various
6	Electronic Workshop	tools and instruments.
		CO3. simulate the circuits using software tools.
		CO4. perform the experiments using virtual laboratory.
		CO1. give short impromptu speeches with confidence and fluency
		CO2. take part in conversations in different functional contexts
		using English following
		appropriate communication strategies.
		CO3. use conventions of politeness and courtesy in speech and
		enhance the effectiveness of their communication in English.
		CO4. articulate the sounds of English (vowels, consonants, and
		diphthongs) with accuracy.
7	Functional English Lab	CO5. check the pronunciation of words in a dictionary using
		their knowledge of phonemic symbols.
		CO6. pause at appropriate places in their speech in English,
		enhancing thereby the comprehensibility of their
		communication.
		CO7. speak English with adequate attention to stress, rhythm, and
		CO8. speak without their pronunciation being marred by
		regional peculiarities, achieving thereby greater intelligibility in
1		their communication with non-Telugu speakers of English.

	1	
		CO9. read out texts of different kinds fluently with appropriate
		pauses, stress, and intonation.
		CO1. perform quantitative analysis by using chemical and instru
		CO2. operate the pH meter, conductivity meter for analyzing the
		CO3. analyze the corrosion rate of a given metal in a given
8	Applied Chemistry Lab	environment by gravimetric method.
		CO4. prepare printed circuit board by electroless plating.
		CO5. synthesize polymers and obtain cell potential by
		construction of an electrochemical cell.
		CO1. understand history and philosophy of constitution with
		reference to Preamble, Fundamental Rights and Duties
		CO2. understand the concept of Unitary and Federal
		Government along with the role of President, Prime Minister
		and Judicial System.
9	Constitution Of India	CO3. structure of the state government, Secretariat, Governor
		and Chief Minister and their functions.
		CO4. learn local administration viz. Panchayat, Block,
		Municipality and Corporation.
		CO5. learn about Election Commission and the process and
		about SC, ST, OBC and women.
		CO1. speak with a reasonable degree of fluency and accuracy in
		professional
		communication situations (such as arriving at a consensus
		through
		discussion, making a presentation, and taking part in a
		telephone conversation)
	Professional Communication	CO2. add to the effectiveness of their oral communication by
		using communication
		strategies, conventions of politeness and courtesy, and stress
		and intonation.
10		CO3. listen to short audio and video clips in native English
		accent (British and American), and gain both understanding of
		messages and sensitivity to native-speaker accents
		CO4. produce written discourses of different kinds (e.g. texts
		expressing opinions and making a convincing case for one's
		standpoint, professional emails, and summaries of lengthy texts)
		with attention to elements of writing such as content,
		organization, language, style, and mechanics
		CO5. guard against grammatical errors Indians typically make
		in their speech and writing in English
		CO1. evaluate improper integrals using Laplace transforms.
		CO2. apply Laplace transforms to find the solutions of initial
		and boundary value problems.

1	1	CO3. find the Fourier series representation of a function in one
11	Integral Transforms And	variable and apply Fourier transform in various engineering
	Vector Calculus	problems.
	Vector Calculus	CO4. apply the concepts of vector differentiation in their
		engineering fields.
		<u> </u>
		CO5. verify the relation between line, surface and volume
		integrals using integral theorems.
		CO1. apply various circuit laws to analyze the electrical circuits.
		CO2. analyze the steady state behavior of AC circuits.
12	Linear Electrical Networks	CO3. analyze the behavior of electrical resonance
		CO4. apply network theorems to analyze the electrical circuits
		CO5. evaluate different two port network parameters.
		CO1. explain construction and working of laser.
		CO2. relate the principles of propagation of light in optical
13	Solid State Physics	fibers for communication applications.
15	Solid State Fligsles	CO3. differentiate classical, quantum free electron theories.
		CO4. identify conductivity mechanism in semiconductors.
		CO5. Interpret polarization in dielectrics and magnetic properties
		CO1. construct polygons and conic sections.
14	Engineering Drawing	CO2. draw projections of points, lines, planes and solids in differ
		CO3. draw orthographic and isometric views of different parts.
		CO1. enhance the effectiveness of their communication through t
		CO2. take part in interactional communication (i.e.
		communication that serves the purpose of social interaction or
		small talk) with fluency
	Professional Communication Lab	CO3. make effective presentations using a range of strategies,
		including a good organization of the content, impressive
		opening and closing, the use of suitable visual aids, the use of
		tories/anecdotes to illustrate a point, effective use of body
		language, and good handling of the question-and-answer
		session;
		CO4. take part in group discussions and debates successfully;
15		
		CO5. answer questions at an elementary level in job interviews
		(e.g. Can you tell us something about yourself? What kinds of
		things do you worry about? What are your key skills? What
		skills do you need to improve? What do you see as your
		strengths? What do you like doing in your spare time? How
		would you describe the way you work? Tell us about a time
		when you showed strong leadership skills. Tell us about a time
		when you had to make a difficult decision. How do
		you see yourself in five years' time?)
		CO6. use team-building skills with impact in different
		situations.

		CO1. identify the semiconductor from the obtained energy gap
		and Hall coefficient
		CO2. draw characteristic curves to estimate thermal coefficient
		of a thermistor.
		CO3. verify magnetic field along the axis of a circular coil.
16	Solid State Physics Lab	CO4. recognize the coercivity and retentivity from B-H curve
		CO5. determine dielectric constant of a dielectric material
		CO6. calculate light gathering power of optical fiber and
		bending losses
		CO7. estimate wavelength of unknown light source.
		CO8. examine working of various sensors
		CO1. create awareness among the people in protection
		ofenvironment.
		CO2. create awareness among the people in protection
		ofenvironment.
17	Environmental Studies	CO3. explain the values ofbiodiversity.
		CO4. identify the sources of environmental pollution, assess
		theireffects and
		suggest suitable control measures
		CO5. adopt sustainable waste managementpractices.
		CO1. determine and understand probability, statistics of random
		variables and their functions.
		CO2. determine statistics of random vectors and their functions
		CO3. calculate statistics of random sequences, random
	Probability Theory And	processes with temporal characteristics and spectral
18	Stochastic Processes	characteristics.
		CO4. relate power calculations and related parameters in time
		domain with frequency domain
		CO5. apply the concepts of probability, random variables /
		processes to analyze input and output relationships and statistics
		in linear systems.
		CO1. study the characteristics and models for diodes and use
		them for various applications
	Semiconductor Devices And	CO2. characterize the current flow in BJTs and MOSFETs
19	Circuits	CO3. characterize the current flow in BJTs and MOSFETs
		CO4. analyze the behaviour of BJTs and MOSFETs under small-
		signal conditions.
	1	CO1. classify the signals and perform various operations on
		signals.
		CO2. perform Fourier analysis on the signals
		CO3. verify magnetic field along the axis of a circular coil.
20	Signals And Systems	CO4. perform correlation operations on signals.
I – Ŭ	1	

	1	CO5. apply the various sampling techniques on continuous time
		signals.
		CO6. analyze the various continuous time signals through
		transformation (Fourier and Laplace) techniques.
		CO1. apply the concepts of electric fields in different
		applications.
		CO2. understand the concepts of magnetic fields
		CO3. demonstrate the knowledge of time varying fields and
21	Electromagnetic Field Theory	Maxwell's equations.
21	Electromagnetic Field Theory	CO4. demonstrate the knowledge of time varying fields and
		Maxwell's equations.
		CO5. understand reflection and refraction of Electromagnetic
		Waves in different media
		CO1. perform the various number system conversions
22	Digital Circuit Design	CO2. design various logic circuits using Boolean laws.
		CO3. design combinational and sequential logic circuits.
		CO4. implement logic expressions using PLDs.
		CO1. apply numerical techniques for solutions of algebraic and
		transcendental equations
		CO2. evaluatedefinite integrals by using different numerical
		techniques and solve ordinary differential equations
23	Numerical Methods And	numerically.
	Complex Analysis	CO3. test the analyticity of a complex function
		CO4. determination of the complex integration with the use of
		Cauchy's integral formulae.
		CO5. evaluation of real definite integral by using Residue
		theorem.
		CO1. verify the I-V characteristics of junction diode, Zener
	Semiconductor Devices and Circuits Lab	diode, LED, photodiode, MOSFET, BJT, and obtain their
		parameters.
24		CO2. use modern tools for simulation.
		CO3. develop applications of diode such as DC power supply,
		Zener voltage regulator, diode clipper, and clamper.
		CO4. design biasing circuits for BJT and MOSFET based
		amplifiers.
		CO1. verify the applicability of network theorems to practical
	Linear Electrical Networks Lab	electrical circuits.
		CO2. specify and test RLC series and parallel resonant circuits.
25		
		CO3. evaluate the time constant of simple RC and RL circuits.
		CO4. interpret /correlate physical observations and
		measurements involving electrical circuits to theoretical
		principles.

		CO5. make oral presentations and prepare written reports
		CO1. analyze the carrier transport in junctions.
		CO2. apply the knowledge of network theory in analyzing the
		concepts of transmissions lines.
		CO3. analyze the transmission lines at different frequencies
		CO4. measure the transmission line parameters using Smith
26	Transmission Lines and	chart.
	Waveguides	CO5. demonstrate the fundamental principles of wave guides
		CO6. understand different modes of propagation in wave
		guides.
		CO7. select an appropriate wave guide to meet specified
		requirements.
		CO1. analyze and characterize the MOS and BJT single stage
		amplifiers at low and high frequencies.
		CO2. analyze the operation of differential amplifier using MOS
27	Analog Circuits	and BJT and current mirrors.
27		CO3. analyze and characterize – feedback, power and tuned
		amplifiers.
		CO4. deduce the expressions for frequency of oscillations and
		conditions for oscillations of RC and LC oscillators
		CO1. disseminate the fundamentals of analog modulation
		schemes and different multiplexing techniques.
28	Analog and Digital Communications	CO2. understand the functioning of AM and FM transmitters
-		and receivers.
		CO3. distinguish different pulse digital modulation systems.
		CO4. elucidate different digital modulation techniques.
		CO1. design algorithms to create, search, insert, delete and
		traversal operations on linear and non-linear data structures CO2. implement stacks, queues and linked list.
29	Data Structures	CO3. perform the operations on binary search trees
		CO4. write algorithms for searching and sorting techniques.
		CO5. develop algorithms for systematic traversal of a graph.
		CO1. describe the IC fabrication technology and various
		electrical properties of MOS, CMOS, BiCMOS circuits
		CO2. realize various logic circuits using nMOS, CMOS, and
		BiCMOS logic.
30	VLSI Design	CO3. apply scaling models to MOS circuit
		CO4. design subsystem components using different logic styles
		in CMOS
		CO5. design DRAM and SRAM circuits using CMOS logic.
		CO1. perform experiment, take observations, present the results
		in proper form, analyze and interpret results, draw conclusions
		by correlating with theory.
		CO2. use modern tools for simulation

	1	
31	Analog Circuits Lab	CO3. design, simulate, hardware implement, test, and obtain performance characteristics of - CS, CE, BJT differential, single- tuned, series-series feedback, shunt-shunt feedback, and class-B complementary symmetry power amplifiers, Wien-bridge and Colpitts oscillators.
		CO4. verify the operation of op amp in inverting and non- inverting configurations.
32	Digital Circuits Design Lab	CO1. apply Boolean laws and K-map to simplify the digital circuits. CO2. draw the digital circuits using gate level implementation. CO3. demonstrate the flow of Electronic Workbench. CO4. develop digital circuits using Electronic Workbench.
33	CMOS VLSI Design (Honor Degree)	 CO1. understand the behavior of CMOS inverter and its energy dissipation. CO2. design CMOS inverter and calculate delay times using mathematics and basic engineering concepts. CO3. analyze combinational and sequential logic circuits; single-stage, cascode, and differential amplifiers; current mirrors, and switched-capacitor circuits. CO4. understand the operation of one-stage and two-stage op amps
34	Digital Signal Processing	CO1. classify various signals and systems, perform various operations on signals and process signals in the discrete domain CO2. compute the Fourier series coefficients and Z-transform of CO3. apply various transform techniques on discrete time signals CO4. design IIR filters for a given specifications CO5. categorize various techniques to design FIR filters and reali
35	Computer Organization and Microprocessors	CO1. demonstrate the basic structure and operation of a digital computer.CO2. summarize the architecture and instruction set of 8086 mici CO3. develop the assembly language programs for 8086 micropro CO4. classify the interrupts and directives.CO5. interface various peripherals with 8086 using 8255.
36	Antennas nd Wave Propagation	 CO1. apply the fundamental concepts of antenna to differentiate radiation mechanism of radiators. CO2. design basic antenna arrays. CO3. designnon-resonant radiators for given specifications. CO4. analyze the performance of different microwave antennas. CO5.demonstrate the knowledge of different wave propagation m
37	CAD For VLSI	CO1. distinguish various methodologies for the design of VLSI systems. CO2. design the VLSI circuits using physical design steps. CO3. demonstrate the knowledge of various placement and routir

		CO4. explore the FPGA physical design steps.
		CO1. develop mathematical models for physical systems.
		CO2. employ the time domain analysis to quantify the
		performance of linear control systems and specify suitable
		controllers.
	Linear Control Systems	
38	(Professional Elective - I)	CO3. quantify time domain specifications to determine stability
		CO4. apply state variable theory to determine the dynamic
		behavior of linear control systems.
		CO5.describe the components of digital control systems and/or
		evaluate mathematical models of linear discrete-time control
		systems using pulse transfer functions.
		CO1. describe the physiology of the human body and infer the
		principles of transducers for biomedical applications.
	Die Medical Engineering	CO2. summarize the cardiovascular, respiratory, muscle and
20	Bio-Medical Engineering	nervous system.
39	(Professional Elective - I)	CO3. demonstrate the recoding of the body vital signs and
		relating it to ICU and biotelemetry.
		CO4. demonstrate the working of modern diagnostic and
		therapeutic systems by using engineering principles.
		CO1. identify an appropriate transmission media for
		establishing a physical network.
		CO2. analyze flow and error control mechanisms.
	Computer Networks And	CO3. establish an end to end connectivity using routing
40	Network Security	algorithms.
40	(Professional Elective - I)	CO4. illustrate the operation of transport and application layer
	(1 totessional Elective - 1)	protocols.
		1
		CO5. suggest suitable cryptographic algorithms for network
		security services.
		CO1 works the converting and construct different converting actors
		CO1. verify the sampling process with different sampling rates.
4.1	Analog and Digital Communications Lab	CO2. compare the operation of various analog and digital
41		modulation schemes.
		CO3. distinguish Frequency Shift Keying and Differential Phase
		Shift Keying techniques.
42		
	VLSI Design Lab	· · · · · · · · · · · · · · · · · · ·
		CO2. demonstrate the process of simulation and synthesis using
		front end tools
		CO3. develop schematic for digital circuits using backend
		tools.
		CO1. explore various modern tools used for python.
		CO2. apply the basic built-in data structures in python to solve
		problems.
42	VLSI Design Lab	 CO4. test linear block encoders and decoders. CO1. apply the knowledge of HDL programming to develop combinational and sequential circuits. CO2. demonstrate the process of simulation and synthesis us front end tools CO3. develop schematic for digital circuits using backend tools.

		CO3. develop programs using object-oriented concepts.
		CO4. make use of python constructs to solve games.
		CO1. demonstrate the operation of CCD and CMOS image
		sensors, BICMOS circuits, power MOSFETs, reversible and
		adiabatic logic circuits.
	Advances In VLSI Design	
44	(Honors Degree)	CO2. distinguish working of various types of memories
44		CO3. describe power reduction, testing, yield, packaging
		techniques
		CO4. verify clocking, critical timing, signal integrity,
		variability, and reliability of nanometer scale CMOS circuit
		designs.
		CO1. analyze the characteristics of op-amp and observe the
	Linear Integrated Circuits	frequency response of operational-amplifier.
45	Applications	CO2. apply the feedback concepts for operational-amplifier apply
	Applications	CO3. design the applications of waveform generators, timers and
		CO4. differentiate A/D and D/A converters
		CO1. acquire knowledge of the architecture and operation of
		Intel 8051 microcontroller.
10	Microcontrollers and	CO2. develop assembly language programs for 8051
46	Embedded Systems	CO3. develop applications for real world problems using 8051 n
		CO4. differentiate an embedded System with the general comput
		CO5. explore the architectures of ARM processors.
		CO1. apply managerial economic concepts in business decision
		making.
		CO2. identify the influencing factors of demand for a product.
47	Engineering Economics And	CO3. categorize production with respect to time and cost.
	Project Management	CO4. relate the market structures and pricing to a product.
		CO5. establish the suitable business organization with available
		CO6. plan and evaluate a project and also apply network concept
		CO1. explore about the design flow, types and the
		programming technologies of an ASIC.
	ASIC Design (Professional Elective - II)	CO2. demonstrate the goals, objectives, measurements and
48		algorithms of partitioning, floor planning, placement and
10		routing.
		CO3. extract the delay for designed circuits.
		CO4. design, synthesize and simulate the digital circuits using di
		CO1. recognize the units and standards in Measurements.
49	Electronic Instrumentation	CO2. identify the various parameters that are measurable in elec
	And Measurement Principles	
1 7		CO3. compare the operation of bridges.
	(Professional Elective - II)	CO4. demonstrate different signal generators and analyzers
		CO5. differentiate various types of cathode ray oscilloscopes.
		CO1. demonstrate the concepts of sampling, DFT, filters and
	DSP Processors And	solve DSP computational errors.
	Architectures	CO2. illustrate the architecture of DSP processors.

50	Andinectures	
50	(Professional Elective - II)	CO3. summarize the on-chip peripherals and develop programs
		for TMS320C54XX DSP processor.
		CO4. interface I/O and memory devices with TMS320C54XX D5
		CO5. explore the architecture of ADSP 2100 and Blackfin proces
	Information Theory And	CO1. compute efficiency of a communication system.
51	Coding	CO2. compute Galois field arithmetic and Minimal Polynomials.
51	(Professional Elective - II)	CO3. investigate error detection and correction capabilities using
		CO4. design encoders and correct errors using decoders for RS at
		CO5. design encoders and correct errors using decoders for Conv
		CO1. design, implement, and test different op-amp
		applications.
52	Linear Integrated Circuits	CO2. design, implement, and test multi-vibrators using 555
	Applications Lab	timer and IC723 voltage regulator.
		CO3. verify the operation of weighted resistor / R-2R digital to a
		CO4. analyze and interpret results by conducting the experiment
		CO1. analyze and implement digital signal processing systems
		in time domain.
		CO2. compute linear and circular convolution of discrete-time
		signals.
53	Digital Signal Processing Lab	CO3. apply discrete Fourier transform (DFT) on discrete-time
		signals.
		CO4. design IIR filters using Butterworth and Chebyshev
		approximations.
		CO5. design FIR filters using windowing techniques.
	Microprocessors And	CO1. perform I/O interface with 8086 microprocessor and 8051
54	Microcontrollers Interfacing	microcontroller.
	Lab	CO2. perform various programming operations with 8086
		microprocessor and 8051 microcontroller
		CO1. differentiate the internal architecture of Atmel and PIC microcontrollers.
		CO2. recommend suitable ARM core to develop embedded
	Advanced Microcontrollers	applications.
55	(Honors Degree)	CO3. summarize the features of LPC17xx microcontroller
55		CO4. demonstrate the architecture of ARM Cortex-M7
		processor
		CO5. classify various types of Cortex-M4/M7 DSP and SIMD
		Instructions. Course Content
		CO1. apply the properties of scattering matrix to analyze the
		operation of microwave components.
		CO2. identify a suitable microwave source for a given
		application, based on the
	Microwave And Optical	operational characteristics.
56	Communications	CO3. measure power, attenuation, frequency and VSWR using m
		CO4. demonstrate the characteristics of optical fiber.
I	I	e e in demonstrate die enandeensties of optical ficer.

	1	CO4. identify a suitable optical source and detector for a given
		application, based on the
		operational characteristics.
		CO1. demonstrate the fundamental concepts of digital image
		processing and apply various transforms on images.
		CO2. summarize the techniques for image enhancement.
57	Digital Image Processing	CO3. differentiate various image restoration techniques.
		CO4. interpret image segmentation and representation techniques.
		CO5. categorize various compression techniques.
		CO1. demonstrate the fundamental concepts of digital image
		processing and apply
	Low Power VLSI Circuits	various transforms on images.
58	(Professional Elective - Iii)	CO2. summarize the techniques for image enhancement.
20		CO3. differentiate various image restoration techniques.
		CO4. interpret image segmentation and representation techniques.
		CO5. categorize various compression techniques.
		CO1. summarize the traditional and emerging cyberphysical sys
		CO2. recommend possible solutions from the perspectives of sy
	Cyber Physical Systems	CO3. identify the challenges in designing and development of c
59	(Professional Elective - III)	CO4. apply the concepts of mathematics and computer science
		in real world
		computation interfaces.
		CO1. acquire the knowledge of multirate operations.
	Multi Rate Signal Processing	CO2. implement uniform DFT filter banks.
60	(Professional Elective - III)	CO3. analyzetwo channel QMF banks.
	, , , , , , , , , , , , , , , , , , ,	CO4. demonstrate M-channel perfect reconstruction filter banks
		CO5. implement Cosine Modulated filter banks.
		CO1. identify the limitations and challenges in cellular mobile r
		CO2. apply suitable techniques to improve the overall performa
	Cellular Mobile	CO3. design a cellular system model for a given region consider
61	Communications	CO4. design an efficient frequency management and channel
	(Professional Elective - III)	assignment scheme by
		selecting proper handoff mechanism.
		CO5. demonstrate the concepts of GSM and multiple access sch
		CO1. explore different components of SOC.
	System On Chip Design	CO2. select processor cores for SOC.
62	(Professional Elective- IV)	CO3. classify various memory cores for SOC.
		CO4. customize the instruction processor.
		CO5. illustrate the design of various SOCs.
		CO1. contrast various technologies of IIoT for different applicat
()	Industrial Internet Of Things	CO2. illustrate the architecture of IIoT.
63	(Professional Elective - IV)	CO3. design Industrial Internet System.
		CO4. apply the concepts of Industry 4.0 for real time application
		CO1. implement DSP algorithms using VLSI architectures.

64	VLSI Signal Processing	CO2. realize the concepts of retiming and unfolding.
	(Professional Elective - IV)	CO3. design of FIR filters using pipelining and parallel processin
		CO4. develop optimized IIR digital filters.
		CO1. demonstrate the knowledge of orbital parameters and satell
		CO2. compare various satellite subsystems.
	Satellite Communications	CO3. design satellite link for required specifications.
65	(Professional Elective - IV)	CO4. explore different multiple accessing techniques for
		effective utilization of
		satellite transponders.
		CO5. navigate the receiving station by global positioning system.
		CO1. demonstrate the knowledge of orbital parameters and satell
	Mixed Signal Ic Design	CO2. identify the challenges of mixed signal design.
66	(Professional Elective- V)	CO3. design sub-micron op-amp.
00	(FIOLESSIONAL Elective- V)	CO4. design and analyze Nyquist rate A/D Converters.
		CO5. demonstrate the knowledge of switched capacitor circuits.
		CO6. identify the basic building blocks of digital integrated syste
		CO1. summarize the concepts of network architectures and
		applications of ad hoc
	Wireless Sensor Networks	and wireless sensor networks.
67	(Professional Elective- V)	CO2. analyze the protocol design issues of ad hoc and sensor net
		CO3. illustrate routing protocols for ad hoc and wireless sensor n
		CO4. demonstrate the sensor network platforms and tools.
		CO1. understand production of speech.
	Speech Processing	CO2. analyze time domain models for speech signals.
68	(Professional Elective- V)	CO3. analyze linear predictive coding techniques.
		CO4. illustrate the homomorphic speech processing.
		CO5. analyze speech enhancement techniques.
		CO1. estimate the performance of Radar using Radar Range Equa
	Radar Engineering (Professional Elective- V)	CO2. apply the principle of FM-CW radar in FM-CW Altimeter.
69		CO3. differentiate MTI and Pulse Doppler Radar.
		CO4. analyze different tracking radar systems.
		CO5. apply the radar concepts in Electronic Warfare.
	RF and Optical	CO1. analyze the characteristics of microwave sources and optica
70		CO2. measure the performance of RF and Microwave component
	Communications Lab	CO3. establish satellite and radar links.
		CO1. design and develop the digital circuits using different mode
71	Digital System Design Using	CO2. simulate and synthesize various digital circuits.
	Verilog	CO3. implement digital interfacing.
		CO1. interface I/O devices with ARM processor.
72	IoT Lab	CO2. implement various sensorial interfaces using scripting lange
		CO3. develop simple IoT based smart systems.
		CO1. apply the concepts of embedded system for IoT application
	Embedded Control D 11 T	CO2. categorize different hardware and software requirements fo
73	Embedded System Based IoT	CO3. design embedded system applications using IoT.
	(Honors Degree)	

1	(HOHOIS Degree)	CO4. devise M2M applications using IoT.
		CO5. develop python programming for IoT Devices.
		CSE
S.No.	Course Name	Course Outcomes
S.No.	Functional English	Course Outcomes CO1:Peak with a reasonable degree of fluency using communication strategies (i.e. using language appropriately to carry out functions such as greeting, requesting information, seeking confirmation, disagreeing) as well conventions of politeness and courtesy • speak with a reasonable degree of fluency and accuracy in contexts requiring tasks such as narrating and describing CO2:listen to short audio and video clips CO3:in standard Indian accent with understanding of the types listed in D (1) (a) below; and CO4: in native English accent (British and American), especially clips in which the speakers or voice actors speak slowly, and gain both understanding of messages and sensitivity to native-speaker accents CO5: read fluently comprehending texts of different kinds using multiple strategies to understand explicitly-stated information as well as underlying meanings CO7: write coherent paragraphs with attention to elements of writing such as content, organization, language, style, and mechanics and the conventions of academic writing CO8: write survey reports with attention to conventions of report writing
2	Linear Algebra and Calculus	CO1: solve the system of linear equations in various engineering problems. CO2:evaluate the eigenvalues and eigenvectors. CO3: solve linear ordinary differential equations . CO4:apply the techniques of partial differentiation in optimization problems and solve first order partial differential equations. CO5:compute areas and volumes using double and triple integrals.
3	Applied Physics	CO1:explain construction and working of laser CO2: relate the principles of propagation of light in optical fibers for applications in communications CO3:solve Schrodinger's wave equation to find the wave function and associated probabilities for simple potentials CO4:identify conductivity mechanism in semiconductors CO5: correlate the electrical and magnetic properties of materials to the properties of atoms.

4	Programming for Problem Solving	 CO1: outline problem solving steps and solve sample problems CO2: use control statements for writing the programs. CO3: apply the concepts of arrays and strings in problem solving. CO4: decompose a problem into functions to develop modular reusable code. CO5: utilize user- defined data types and text I/O operations for efficient handling of data.
5	Universal Human Values 2: Understanding Harmony	CO1: be aware of themselves and surroundings CO2: be responsible in life CO3: develop personality to be happy continuously and prosper CO4:handle the problems with sustainable solutions. CO5: possess human nature in mind CO6: apply what they have learnt to their own self in real life situations
6	Functional English Lab	 CO1: give short impromptu speeches with confidence and fluency. • take part in conversations in different functional contexts using English following appropriate communication strategies. • use conventions of politeness and courtesy in speech and enhance the effectiveness of their communication in English. • articulate the sounds of English (vowels, consonants, and diphthongs) with accuracy. CO2: check the pronunciation of words in a dictionary using their knowledge of phonemic symbols. CO3: pause at appropriate places in their speech in English, enhancing thereby the comprehensibility of their communication. CO4: speak English with adequate attention to stress, rhythm, and intonation. CO5: speak without their pronunciation being marred by regional peculiarities, achieving thereby greater intelligibility in their communication with non-Telugu speakers of English. CO6:read out texts of different kinds fluently with appropriate pauses, stress, and intonation.

		CO1: calculate light gathering power of optical fiber and
		bending losses
		CO2: study the directionality and wavelength of laser
		CO3: identify the nature of semiconductor from the obtained
7	Applied Physics Lab	energy gap and Hall coefficient.
		CO4: draw characteristic curves of thermistor and LED.
		CO5: study regulatory nature of zener diode
		CO6: estimate magnetic induction, Magnetic susceptibility and
		Dielectric constant.
		CO1: apply problem solving steps to solve a problem.
		CO2: develop C programs using selection and iterative
8	C Programming Lab	statements.
		CO3: decompose a problem into functions to develop modular
		reusable code.
		CO1: understand history and philosophy of constitution with
		reference to Preamble, Fundamental Rights and Duties
		CO2: understand the concept of Unitary and Federal
		Government along with the role of President, Prime Minister
		and Judicial System.
9	Constitution of India	CO3: structure of the state government, Secretariat, Governor and Chief Minister and their functions.
		CO4: learn local administration viz. Panchayat, Block, Municipality and Corporation.
		CO5: learn about Election Commission and the process and
		about SC, ST, OBC and women.
		CO1: speak with a reasonable degree of fluency and accuracy in
		professional communication situations (such as arriving at a
		consensus through discussion, making a presentation, and
		taking part in a telephone conversation)
		CO2: add to the effectiveness of their oral communication by
		using communication strategies, conventions of politeness and
		courtesy, and stress and intonation.
		CO3: listen to short audio and video clips in native English
		accent (British and American), and gain both understanding of
10	Professional Communication	messages and sensitivity to native- speaker accents
10		CO4: read fluently, comprehending texts of different kinds
		using multiple strategies and higher-order skills
		CO5: produce written discourses of different kinds (e.g. texts
		expressing opinions and making a convincing case for one's
		standpoint, professional emails, and summaries of lengthy texts)
		with attention to elements of writing such as content,
		organization, language, style, and mechanics
		CO6: guard against grammatical errors Indians typically make
		in their speech and writing in English
L	1	

11	Integral Transforms and Vector Calculus	 CO1:evaluate improper integrals using Laplace transforms. CO1: apply Laplace transforms to find the solutions of initial and boundary value problems. CO1: find the Fourier series representation of a function in one variable and apply Fourier transform in various engineering problems. CO1: apply the concepts of vector differentiation in their engineering fields. CO1: verify the relation between line, surface and volume integrals using integral theorems.
12	Basic Electronic Devices	CO1: understand the behavior of different semiconductor devices.CO2: identify appropriate semiconductor devices for various applications.CO3: analyze the rectifier circuits with and without filters.CO4: describe the switching and amplification action of BJT and MOSFET.
13	Python Programming	 Upon successful completion of the course, the students will be able to describe the basic elements of python programming for logic building. use functions and modules to develop python programs. differentiate mutable and immutable data types. develop code to handle exceptions and files. apply object-oriented concepts to develop programs.
14	Data Structures	 Upon successful completion of the course, the students will be able to implement and analyse searching and sorting techniques. implement algorithms for linked lists. apply algorithms of stacks and queues. develop data structures to make use of trees and heaps. develop algorithms for traversal of graphs and hashing for efficient storage of data.

	1	
		• enhance the effectiveness of their communication through
		body language;
		• take part in interactional communication (i.e. communication
		that serves the purpose of social interaction or small talk) with
		fluency
		• take part in transactional communication (i.e. communication
		that serves the purpose of carrying out functions such as giving
		directions, complaining, and apologizing) with fluency
		 speak professionally in telephone conversations;
		• make effective presentations using a range of strategies,
		including a good organization of the content, impressive
15	Professional Communication	opening and closing, the use of suitable visual aids, the use of
	Lab	stories/anecdotes to illustrate a point, effective use of body
		language, and good handling of the question-and-answer
		session;
		• take part in group discussions and debates successfully;
		• answer questions at an elementary level in job interviews (e.g.
		Can you tell us something about yourself? What kinds of things
		do you worry about? What are your key skills? What skills do
		you need to improve? What do you see as your strengths? What
		do you like doing in your spare time? How would you describe
		the way you work? Tell us about a time when you showed
		strong leadership skills. Tell us about a time when you had to
		• make use of control statements in decision making for various
		case studies.
16	Python Programming Lab	handle exceptional cases at run-time.
	_	• use file handling operations for storing and retrieving of data.
		• apply object-oriented concepts to develop reusable code.
		• implement sorting and searching algorithms.
		• develop suitable code to simulate the operations on linked
		lists.
17	Data Structures Lab	• implement stacks and queues using arrays and linked lists.
		• write code using a stack for arithmetic expressions evaluation
		and conversion.
		• perform operations on binary search trees and graphs.
		• create a hash table and perform operations on it.
		CO1:create awareness among the people in protection
18	Environmental Studies	ofenvironment.
		CO1: analyze structure and functional attributes of an
		ecosystem.
		CO1: explain the values ofbiodiversity.
		CO1: identify the sources of environmental pollution, assess
		theireffects and suggest suitable control measures.
		CO1: adopt sustainable waste managementpractices.

19	Managerial Economics and Financial Analysis	 apply managerial economic concepts in business decision making. categorize production with respect to time and cost. relate market structures and pricing of a product. establish suitable business organization with available resources. apply accounting rules in determining the financial results and prepare financial statements.
20	Probability and Statistics	 find the mean, variance and different probabilities. construct sampling distributions, confidence intervals and to find maximum error of estimates for population parameters. validate given hypothesis in case of large sample problems. examine the given hypothesis in case of exact samples. measure the association between the variables and to fit different curves to the given data.
21	Digital Logic Design	 perform number system conversions, signed number arithmetic using complements. simplify Boolean functions using Boolean laws, theorems and k- maps implement combinational logic for adders and subtractors.
22	Object Oriented Programming through Java	 describe OOP concepts and features of Java. apply class and inheritance concepts in developing the Java code. create user interfaces and packages for a given problem. develop code to handle exceptions and implement multi-threading to make applications more dynamic. design GUI applications with event handling mechanism.
23	Database Management Systems	 analyze information storage problem and derive a model in the form of an entity relationship diagram. develop simple and complex queries using Structured Query Language (SQL). apply principles of normalization for designing a good relational database schema. compare different techniques related to transaction management and concurrency control. construct multi-level indices for fast retrieval of data and use recovery techniques to recover the database from a crash.
24	Probability and Statistics Using R Lab	 represent data in graphical form. compute measures of central tendency. compute measures of dispersion. characterize different kinds of data distributions. implement regression analysis.

25	Java Programming Lab	 apply the concept of object oriented approach in problem solving. create packages for reusability. examine exceptions and multi-tasking. create GUI applications to handle events create relational database with the given constraints. formulate simple and complex queries using features of SQL.
26	Database Management Systems Lab	 • create views on relational database based on the requirements of users. • develop PL/SQL programs for processing multiple SQL statements. • implement triggers on a relational database.
27	Discrete Mathematical Structures	 use mathematical logic for analyzing propositions and proving theorems. describe the properties of relations, functions and lattice theories. categorize different types of algebraic structures and describe their properties. apply the concepts of graph theory in modeling and solving non-trivial problems incomputer networks. apply pigeon hole principle in computer applications and solve recurrence relations.
28	Computer Organization	 identify different types of instructions. differentiate micro-programmed and hard-wired control units. analyze the performance of hierarchical organization of memory. summarize different data transfer techniques. demonstrate arithmetic operations on fixed- and floating-point numbers and illustrate concepts of parallel processing.
29	Design and Analysis of Algorithms	 analyze the performance of algorithms based on time and space complexity. apply divide and conquer technique to solve sorting and searching problems. apply greedy method to find optimal solution to a class of problems. solve optimization problems using dynamic programming. construct state space tree to find all possible solutions to a class of problems using back tracking and branch and bound techniques.

30	Operating Systems	 describe the role, functions and structures of operating systems. demonstrate the concept of process and analyze the performance of CPU scheduling algorithms. compare different memory management schemes and apply page replacement algorithms in virtual memory. apply deadlock handling techniques to prevent deadlocks and analyze the performance of different disk scheduling algorithms. develop software/hardware-based solutions for critical section problems and outline files and directory structures.
31	Software Engineering *	 apply suitable process model for software development based on stake holder requirements. estimate cost and schedule required to develop a software. analyze customer requirements and prepare SRS document. use software design principles in the design of a software. test a software using different testing techniques.
32	Information Retreival Systems	 identify the basic theories in information retrieval systems. use inverted file as an index data structure to retrieve the documents from the database. create signature files for fast retrieval of text data. build PAT treesand PAT arrays for the given text document. use stemming algorithms to improve the performance of IR systems.
33	Computer Graphics	 outline different graphical display devices and drawing algorithms. illustrate different 2-D geometrical transformations on graphical objects interpret different line and polygon clipping algorithms infer different 3- D transformations and viewing functions on objects. summarize different surface detection methods and computer animations
34	Operating Systems Lab	 simulate CPU and disk scheduling algorithms. develop code for memory management techniques. implement Banker's algorithm to avoid deadlocks. develop shell scripts in order to perform shell programming.
35	Game Programming	 install and make use of Unity 3D Editor in developing gaming apps. developing game objects using scripts. develop a 2D gaming application on windows. develop a 3D gaming application on windows.

36	Formal Languages and Automata Theory	 design finite automata for regular languages. write regular expressions for regular languages or for DFA by applying Arden's theorem. generate grammar for a given language. design PDA for context free languages. design Turing Machine for the phrase-structured languages.
37	Computer Networks	 compare protocol models (OSI, TCP/IP) and select suitable protocol for network design. design a network by deciding relevant multiplexing and switching technique to improve performance of the network. apply flow control, error control techniques and protocols to verify the correctness of data in the communicated network. apply routing and congestion control algorithms to deliver data packets across the networks. use communication protocols like IP, TCP, UDP, DNS, HTTP, FTP across the Internet.
38	Full Stack Application Development	 design web pages using HTML5 and CSS3. develop dynamic web pages and perform form validations using Javascript. develop server side script to handle the given form data using JSP. perform CRUD operations on MySql database using PHP. perform various operations on constructing React elements with data.
39	Artificial Intelligence	 analyze and formalize the problems as a state space, graph, or tree. use search algorithms to discover solution to a given problem. solve problems with uncertain information using probabilistic reasoning. formalize sequential decision making using Markov decision process. apply reinforcement learning to take suitable action to maximize reward in particular situation.
40	UML and Design Patterns	 apply the object oriented analysis and designs in software development and. develop static conceptual models of the system. create dynamic behavioral models of the system to meet user needs. design object oriented architecture models. select an appropriate design pattern to refine the model.

T T		4 . 4 . 4 . 4
		• apply sorting algorithms on a given data.
		 construct priority queue using a heap data structure.
		• create AVL and Red Black trees for the given data and
41	Advanced Data Structures	perform insertion, deletion and search operations on them.
		• create multi-way search trees for the given data and perform
		insertion, deletion and search operations on them.
		 use digital search structures in searching process.
		• apply improvement strategies to see the inline growth in
		economic concerns of the project.
		• develop project plans that address real time management
		challenges.
		• design efficient work break down structures that meet real
42	Software Project Management	•
	5 8	• design effective software development plans to meet
		organizational needs.
		• use software metrics to measure the quality of software
		projects and to gain insights of management issues related to the
		project.
		• analyze the requirements of a networked programming
		environment and identify the issues to be solved.
		• interpret the basic network technologies and protocols usage
		by common internet application.
		develop client-server communication using TCP for
43	Network Programming	communicating processes exist in the different systems.
		• apply theoretical principles and use appropriate functions for
		establishing client-server communication.
		• develop client-server communication using UDP protocols by
		writing socket programming.
		demonstrate social network analysis and measures.
	Social Network Analysis	• analyze random graph models and navigate social networks
		data
		• apply the network topology and Visualization tools.
44		• analyze the experiment with small world models and
		clustering models.
		• compare the application driven virtual communities from
		social network Structure.
		• implement data link layer framing and error detection
	Computer Networks Lab	methods.
45		• analyze the topological and routing strategies for an IP based
		networking infrastructure.
		design web pages using HTML5, CSS3 and Javascript.
	Web Application Development Using Full Stack	• use Javascript and PHP to access and validate form data.
		 develop a database application and perform various
		operations on database using JSP and PHP.
		operations on database using sor and rin .

47	Compiler Design	 list compilation process steps of a language and represent tokens using regular expressions. design a parser to verify the syntax of a programming language. design syntax directed translation schemes for a given context free grammar.
		 construct symbol table to access identifier information and perform various operations on it. apply code optimization techniques to enhance the efficiency of the intermediate code and generate code using generic code generation or DAG.
48	Data Mining **	 describe fundamentals, and functionalities of data mining system and data pre-processing techniques. Illustrate the major concepts and operations of multi dimensional data models. analyze the performance of association rule mining algorithms for finding frequent item sets from the large databases. apply classification algorithms to solve classification problems. use clustering methods to create clusters for the given data set.
49	Introduction to Machine Learning	 describe machine learning and different forms of learning. use statistical learning techniques to solve a class of problems. build support vector machine for the given data to create optimal boundary that best classifies the data. design neural networks to simulate the way human brain analyzes and processes information. solve classification problems using a decision tree.
50	Image Processing	 illustrate fundamental steps in digital image processing. make use of appropriate digital image enhancement techniques in spatial domain for real world problems. apply suitable image segmentation and Compression techniques for an application. demonstrate Color image processing techniques. summarize different reshaping operations on the image and their practical applications.

51	UNIX Network Programming	 analyze the requirements of a networked programming environment and identify the issues to be solved. develop Client-Server communication using TCP&UDP protocols by writing socket programming. interpret the basic network technologies & protocols usage by common internet application. apply theoretical principles and use appropriate functions for establishing Client-Server communication. classify different types of IPC mechanisms for communicating processes exist in the same system and in different systems.
52	Adhoc Wireless Networks	 Upon successful completion of the course, the students will be able to describe the fundamental characteristics and challenges and routing protocols of Ad hoc networks apply the routing protocols and security services in large scale networks design the wireless sensor applications apply the Data retrieval techniques in wireless networks simulate the wireless network applications using network platforms and tools
53	C# .Net	 Upon successful completion of the course, the students will be able to configure the .NET environment for an application. implement simple programs in C# using control structures. apply the in heritance mechanism to solve simple problems in C#. apply the exception handling mechanism to improve the robustness of an application. create user interface components for a. NET application and connect web pages with a database.
54	DevOps	 Upon successful completion of the course, the students will be able to explain fundamentals and advance concepts of Agile and DevOps. describe Usage of multiple tools for unit functions in a DevOps pipeline. illustrate various types of version control systems, continuous integration tools. elaborate on various tools to orchestrate, deployment, infrastructure management. outline Devops and Cloud work together.

		Upon successful completion of the course, the students will be
		able to
		• apply the object oriented analysis and designs in software
55	Object Oriented Analysis &	development and familiar with the UML concepts.
	Design	• develop static conceptual models of the system.
		• create dynamic behavioral models of the system to meet user
		needs.
		• design object oriented architecture models.
		• design java/python programs for various learning algorithms.
50		• apply appropriate data sets to the machine learning
56	Machine Learning Lab	algorithms.
		• identify and apply machine Learning algorithms to solve real
		world problems.
		• implement basic CRUD operations using MongoDB.
		• apply node.js constructs in application development
57	MEAN Stack Technologies	• use Express.js for web application development and apply web
		services concepts using Restful API.
		• compose and transpile typescript codes.
		design applications using front-end framework Angular.
		• apply statistical learning methods to data for inferences.
50		• analyze data using machine learning approaches
58	Data Science	• illustrate graphical analysis and hypothesis testing methods
		• use data wrangling approaches for pre-processing the data
		 perform descriptive analytics over massive data. describe security goals and various attacks occurs in a
		network.
		• compare and apply different encryption and decryption
		techniques.
		• compute cryptographic checksums and evaluate the
59	Cryptography and Network	performance of different message digest and authentication
	Security	algorithms.
		• apply network and internet security protocols to secure E-
		mails, web content.
		• analyze system security using various firewalls and intrusion
		detection techniques.
60		• illustrate the importance of big data and challenges of
	Big Data Analytics	conventional systems.
		• outline the building blocks of hadoop and basic file system
		operations.
		• analyze data with hadoop Map Reduce framework.
		• process the data in hadoop environment using Pig and Hive to
		solve real world and industrial problems.
		• enumerate the open source frameworks used to efficiently
		store and process large data sets
		• process the data in hadoop environment using Pig and Hive to solve real world and industrial problems.
		store and process large data sets

61	Deep Learning	 outline a feed forward neural network to solve classification problems. train the neural network using back propagation algorithm. use deep neural networks to solve real life problems. solve classification and pattern problems using Probabilistic Neural Networks.
62	Cloud Computing	 apply neural networks in Object recognition, sparse coding, computer vision, and natural language processing. describe the stages in historical evolution of cloud computing. use suitable cloud services to define cloud for the enterprise. demonstrate hardware level and OS level virtualization to implement virtual machines • design machine images, web applications and databases for virtual machines. • apply data, network and host security for the cloud.
63	Natural Language Processing	 show sensitivity to linguistic phenomena and model them with formal grammars. carry out proper experimental methodology for training and evaluating empirical NLP systems. manipulate probabilities, construct statistical models over strings and trees, and estimate parameters using supervised and unsupervised training methods. design, implement, and analyze NLP algorithms. design different language modeling Techniques.
64	DevOps Tools	 explain fundamentals and advance concepts of Agile and DevOps. describe Usage of multiple tools for unit functions in a DevOps pipeline. illustratevarious types of version control systems, continuous integration tools. elaborate on various tools to orchestrate, deployment, infrastructure management. outline Devops, Cloud and application security work together.
65	Soft Computing Techniques	 describe soft computing and its applications. design neural networks to simulate the way human brain analyzes and processes information. use fuzzy systems in information processing for classification and decision making. design genetic algorithms to find optimal or near optimal solutions to difficult problems. illustrate different kinds of hybrid systems used in soft computing.

66	Internet of Things	 summarize the basic concepts of Internet of Things. analyze the requirements and specifications to design any IoT application. develop smart city and agricultural applications using Arduino IoT and Raspberry pi IoT kit. use the tools such as AutoBahn, Xively Cloud communication API's to exchange data between cloud and IoT kit. analyze the Home, Agricultural and Smart City Applications
67	Ethical Hacking	 describe the basic concepts in ethical hacking and legality. use CEH Scanning methodology to gather network and host information. implement the sniffers to give countermeasures to network vulnerabilities. protect web servers and web applications from DoS attack and other software vulnerabilities. use the sniffer tools, penetration and detection techniques in wireless network to protect from attacks
68	Blockchain Technologies	 demonstrate how the processes in payment and funding happens in block chain technology. identify the risks involved in building block chain applications. outline legal implications using smart contracts. choose the present landscape of block chain implementations and understand crypto currency markets. examine how to profit from trading crypto currencies.
69	Distributed Systems	 Upon successful completion of the course, the students will be able to describe the important characteristics of distributed systems and the salient feature of architectural models. apply inter-process communication in a distributed environment implement the RMI and RPC for different case studies analyze how operating system can support to distributed systems develop a familiarity with distributed file systems and also synchronization algorithms distinguish between active replication and passive replication.
70	Agile Software Development Process	 illustrate Pair Programming for solving software problems develop Reports for Software Collaboration. develop less or zero bug software for sample scenario. apply various slack reduction techniques in software development. develop methodologies for estimating performance stories.

		• identify the importance of Recommender Systems.
		• model recommender system by using content-based filtering
	Introduction to	technique.
71	Recommender Systems	• build recommender system by collaborative filtering
		technique.
		• design recommender system by hybrid approaches.
		evaluate recommender systems.
		• describe the key techniques and theory behind data
		visualization.
		• classify various visualization systems and describe the
	Data Visualization	methods used to spatial data tographical depictions.
72		• use effectively various visualization structures like tables,
	Techniques	trees ,graphs/ networks, textand document.
		• identify a wide variety of available visualization systems and
		its key features.
		• analyze visualization techniques for line, point and region.
		apply suitable LINUX commands to work in Hadoop
		environment.\
73	Big Data Analytics Lab	• use HDFS file structure and Map Reduce framework to solve
		complex problems.
		• analyze data using Pig and Hive.

	1	CO8.write survey reports with attention to conventions of report
		writing
		CO9.guard against mistakes Indians typically make in their
		speech and writing in English
		CO1.solve the system of linear equations in various engineering
		problems
		CO2.evaluate the eigenvalues and eigenvectors.
		CO3. solve linear ordinary differential equations .
2	Linear Algebra And Calculus	CO4. apply the techniques of partial differentiation in
-		optimization problems and
		solve first order partial differential equations
		CO5.compute areas and volumes using double and triple
		integrals
		CO1.apply BET method to determine surface area of a nano
		material and discuss the preparation, properties and applications
		of nanomaterials. Explain the principles of green chemistry for
		sustainable development.
		CO2.explain the electrochemistry of batteries and sensors.
		CO3.explain the structure of bio-molecules and their application
3	Applied Chemistry	in molecular machines
		CO4.discuss the different types of semi-conductors, preparation
		and properties of polymer materials used in electronic
		components.
		CO5.interpret the spectral data to analyse the structure of simple
		molecules.
		CO1.understand the behavior and characteristics of p-n junction
		diode.
		CO2.Identify appropriate special semiconductor devices for
	Elements Of Electronics	electronic applications
4	Engineering	CO3. describe the switching and amplification action of BJT &
		FET.
		CO4.recognize unipolar and bipolar logic families and their use
		in ICs.
		CO1.outline problem solving steps and solve sample problems
		CO2.use control statements for writing the programs.
	Dragramming For Drahlam	CO3.apply the concepts of arrays and strings in problem
5	Programming For Problem Solving	solving.
		CO4.decompose a problem into functions to develop modular
		reusable code.
		CO5.utilize user- defined data types and text I/O operations for
		efficient handling of data.
		CO1.give short impromptu speeches with confidence and
		fluency

		CO2.take part in conversations in different functional contexts using English following appropriate communication strategies.
		CO3. use conventions of politeness and courtesy in speech and enhance the effectiveness of their communication in English.
		CO4.articulate the sounds of English (vowels, consonants, and
		diphthongs) with accuracy.
		CO5.check the pronunciation of words in a dictionary using
6	Functional English Lab	their knowledge of phonemic symbols.
		CO6.pause at appropriate places in their speech in English,
		enhancing thereby the comprehensibility of their
		communication
		CO7.speak English with adequate attention to stress, rhythm,
		and intonation.
		CO8.speak without their pronunciation being marred by
		regional peculiarities, achieving thereby greater intelligibility in
		their communication with non-Telugu speakers of English.
		CO9.read out texts of different kinds fluently with appropriate
		pauses, stress, and intonation.
		CO1.analyze the total hardness of water by volumetric method.
		CO2.operate the pH meter, conductivity meter and turbidity
		meter for analyzing the water quality
		CO3.synthesize phenol – formaldehyde resin (Bakelite), poly
7	Applied Chemistry Lab	aniline and obtain cell potential by the construction of an
		electrochemical cell.
		CO4.analyze the corrosion rate of a given metal in a given
		environment by gravimetric method.
		CO5.operate spectrophotometer and determine the
		concentration of Ferric Iron in a given solution.
		CO1.apply problem solving steps to solve a problem.
		CO2.develop C programs using selection and iterative statements.
8	C Programming Lab	
0		CO3.decompose a problem into functions to develop modular reusable code.
		CO4.apply structures and unions to solve a problem.
		CO5. implement file operations on a given file.CO1.create awareness among the people in protection
		ofenvironment.
		CO2.analyze structure and functional attributes of an ecosystem
9	Environmental Studies	CO3.explain the values of biodiversity
		CO4.dentify the sources of environmental pollution, assess
		theireffects and suggest suitable control measures.
	I	menericets and suggest suitable control incasures.

	1	CO5.adopt sustainable waste managementpractices.
		CO1.speak with a reasonable degree of fluency and accuracy in
		professional communication situations (such as arriving at a
		consensus through discussion, making a presentation, and
		taking part in a telephone conversation)
		CO2.add to the effectiveness of their oral communication by
		using communication strategies, conventions of politeness and
		courtesy, and stress and intonation.
		CO3.listen to short audio and video clips in native English
10	Destactional Communication	accent (British and American), and gain both understanding of
10	Professional Communication	messages and sensitivity to native speaker accents
		CO4. produce written discourses of different kinds (e.g. texts
		expressing opinions
		and making a convincing case for one's standpoint, professional
		emails, and
		summaries of lengthy texts) with attention to elements of
		writing such as
		content, organization, language, style, and mechanics
		CO5.guard against grammatical errors Indians typically make in
		their speech and writing in English
		CO1. evaluate improper integrals using Laplace transforms.
		CO2.apply Laplace transforms to find the solutions of initial
		and boundary value problems
		CO3.find the Fourier series representation of a function in one
11	Integral Transforms And	variable and apply Fourier transform in various engineering
	Vector Calculus	problems.
		CO4.apply the concepts of vector differentiation in their
		engineering fields.
		CO5.verify the relation between line, surface and volume
		integrals using integral theorems.
		CO1.explain construction and working of laser
		CO2.relate the principles of propagation of light in optical fibers
		for applications in communications
12	Applied Physics	CO3.solve Schrodinger's wave equation to find the wave
		function and associated probabilities for simple potentials
		CO4.identify conductivity mechanism in semiconductors
		CO5.correlate the electrical and magnetic properties of
		materials to the properties of atoms.
		CO1 implement and an implementation of the first of the
		CO1. implement and analyse searching and sorting techniques.
10	Data Structure	CO2.implement algorithms for linked lists.
13	Data Structures	CO3.apply algorithms of stacks and queues. CO4.develop data structures to make use of trees and heaps.
	1 · · · · · · · · · · · · · · · · · · ·	IL LIA develop data structures to make use of frees and heaps

1	1	
		CO5.develop algorithms for traversal of graphs and hashing for
		efficient storage of data.
		CO1.be aware of themselves and surroundings
		CO2.be responsible in life
14	Universal Human Values 2:	CO3.develop personality to be happy continuously and prosper
14	Understanding Harmony	CO4.handle the problems with sustainable solutions.
		CO5.possess human nature in mind
		CO6.apply what they have learnt to their own self in real life
		situations
		CO1.enhance the effectiveness of their communication through
		body language;
		CO2. take part in interactional communication (i.e.
		communication that serves the purpose of social interaction or
		small talk) with fluency
		CO3.speak professionally in telephone conversations;
		CO4.make effective presentations using a range of strategies,
		including a good organization of the content,
		impressive opening and closing, the use of suitable visual aids,
		the use of stories/anecdotes to illustrate a point, effective use of
		body language, and good handling of the question-and-answer
	Professional Communication	session;
15	Lab	CO5.take part in group discussions and debates successfully;
	Lab	CO6.answer questions at an elementary level in job interviews
		(e.g. Can you tell us something about yourself? What kinds of
		things do you worry about? What are your key skills?
		What skills do you need to improve? What do you see as your
		strengths? What do you like doing in your spare time? How
		would you describe the way you work? Tell us about a time
		when you showed strong leadership skills. Tell us about a time
		when you had to make a difficult decision. How do you see
		yourself in five years' time?) ;and
		CO7.use team-building skills with impact in different situations
		CO1.calculate light gathering power of optical fiber and
		bending losses
		CO2.study the directionality and wavelength of laser
		CO3.identify the nature of semiconductor from the obtained
16	Applied Physics Lab	energy gap and Hall coefficient.
		CO4.draw characteristic curves of thermistor and LED.
		CO5.study regulatory nature of zener diode
		CO6.estimate magnetic induction, Magnetic susceptibility and
		Dielectric constant.

		CO1.implement sorting and searching algorithms.
		CO2.develop suitable code to simulate the operations on linked
		lists.
		100.
17	Data Structures Lab	CO3.implement stacks and queues using arrays and linked lists.
17		CO4.write code using a stack for arithmetic expressions
		evaluation and conversion.
		CO5.perform operations on binary search trees and graphs.
		CO6.create a hash table and perform operations on it.
		CO1.understand history and philosophy of constitution with
		reference to Preamble, Fundamental Rights and Duties
		CO2.understand the concept of Unitary and Federal
		Government along with the role of President, Prime Minister
		and Judicial System.
18	Constitution Of India	CO3.structure of the state government, Secretariat, Governor
		and Chief Minister and their functions
		CO4.learn local administration viz. Panchayat, Block,
		Municipality and Corporation.
		CO5.learn about Election Commission and the process and
		about SC, ST, OBC and women
	Discrete Mathematical	CO1.use mathematical logic for analyzing propositions and
	Structures	proving theorems
		CO2.describe the properties of relations, functions and lattice
		theories.
19		CO3.categorize different types of algebraic structures and
		describe their properties.
		CO4.apply the concepts of graph theory in modeling and
		solving non-trivial problems incomputer networks.
		CO5.apply pigeon hole principle in computer applications and
		solve recurrence relations.
		CO1.apply managerial economic concepts in business decision
		making
	Managarial Economics And	CO2. categorize production with respect to time and cost.
20	Managerial Economics And Financial Analysis	CO3. relate market structures and pricing of a product
		CO4.establish suitable business organization with available resources.
		CO5.apply accounting rules in determining the financial results
		and prepare financial statements
		CO1.perform number system conversions, signed number
		arithmetic using complements
		CO2.simplifyBoolean functions using Boolean laws, theorems
		and k- maps
21	Digital Logic Design	1
		CO3. implement combinational logic for adders and subtractors.
	I	

	1	
		CO4.design combinational logic circuits such as decoders,
		encoders, multiplexers and demultiplexers.
		CO5.design registers and counters using flip flops
		CO1.describe OOP concepts and features of Java.
		CO2.apply class and inheritance concepts in developing the
		Java code.
22	Object Oriented Programming	
	Through Java	CO3.create user interfaces and packages for a given problem.
		CO4.develop code to handle exceptions and implement multi-
		threading to make applications more dynamic.
		CO5.designGUI applications with event handling mechanism.
		CO1.design finite automata for regular languages.
		CO2.write regular expressions for regular languages or for DFA
l		by applying Arden's theorem.
23	Formal Languages And	CO3.generate grammar for a given language.
	Automata Theory	CO4.design PDA for context free languages.
		CO5.design Turing Machine for the phrase-structured
		languages.
		CO1.apply the concept of object oriented approach in problem
		solving.
24	JAVA Programming Lab	CO2.create packages for reusability.
		CO3.examine exceptions and multi-tasking.
		CO4.create GUI applications to handle event
		CO1.solve basic mathematical expressions using R software
		tool.
25	R Programming Lab	CO2.develop basic programs using control structures in R
		CO3.create and perform operations on data structures in R
		CO4.implement Graphs using R programming
		CO1.use shell script to create files and handle text documents
		CO2.create child processes, background process and zombies
26	R Programming Lab	CO3.write shell scripts to solve problems.
		CO4.implement some standard Linux utilities such as ls, cp etc.
		using system calls
		CO1.find the mean, variance and different probabilities.
		COT.mid the mean, variance and different probabilities.
		CO2.construct sampling distributions, confidence intervals and
		to find maximum error of estimates for population parameters.
27	Probability And Statistics	CO3 validate given hypothesis in ages of large comple
21		CO3.validate given hypothesis in case of large sample
		problems.
		CO4.examine the given hypothesis in case of exact samples.
1		CO5.measure the association between the variables and to fit
		different curves to the given data.

		CO1.analyze information storage problem and derive a model in
		the form of an entity relationship diagram.
		CO2.develop simple and complex queries using Structured
		Query Language (SQL).
	Database Management	CO3.apply principles of normalization for designing a good
28	Systems	relational database schema.
	Systems	CO4.compare different techniques related to transaction
		management and concurrency control.
		CO5.construct multi-level indices for fast retrieval of data and
		use recovery techniques to recover the database from a crash.
		use recovery techniques to recover the database from a crash.
		CO1.identify different types of instructions.
		CO2.differentiate micro-programmed and hard-wired control
		units.
29	Computer Organization	CO3.analyze the performance of hierarchical organization of
29	Computer Organization	memory.
		CO4.summarize different data transfer techniques.
		CO5.demonstrate arithmetic operations on fixed- and floating-
		point numbers and illustrate concepts of parallel processing.
		CO1.demonstrate Basics of Python Programming
		CO2.use functions and module to develop Python programs.
20		CO3.differentiate mutable and immutable data types.
30	Python Programming	CO4.develop code to handle exceptions and files.
		CO5.design applications with object orientation, GUI and
		database
		CO1.create relational database with the given constraints.
		CO2.formulate simple and complex queries using features of
		SQL.
21	Database Management	CO3.create views on relational database based on the
31	Systems Lab	requirements of users.
		CO4.develop PL/SQL programs for processing multiple SQL
		statements.
		CO5.implement triggers on a relational database.
		CO1.apply problem solving steps to solve a problem.
~~		CO2.develop a python program for a given problem.
32	Python Programming Lab	CO3.apply object-oriented concepts to develop programs.
		CO4.design applications with GUI, Database.
		CO1.apply basic and important design concepts and issues of
		development of mobile applications.
33	Mobile Application	CO2.summarize the capabilities and limitations of mobile
	Development	devices.
		CO3.develop mobile applications using Android Studio.
		CO1.apply suitable process model for software development
		based on stake holder requirements
	I	and a state notaer requirements

		CO2.estimate cost and schedule required to develop a software.
34	Principles Of Software Engineering	CO3.analyze customer requirements and prepare SRS document.
	2	CO4.apply software design principles in the design of a
		software.
		CO5.design test cases for testing a software product using
		different testing techniques.
		CO1.analyze the performance of algorithms based on time and
		space complexity
		CO2.apply divide and conquer technique to solve sorting and
		searching problems
35	Design And Analysis Of	CO3.apply greedy method to find optimal solution to a class of problems.
	Algorithms	
		CO4.solve optimization problems using dynamic programming.
		CO5.construct state space tree to find all possible solutions to a
		class of problems using back tracking and branch and bound
		techniques.
		CO1.describe the role, functions and structures of operating
		systems.
		CO2.demonstrate the concept of process and analyze the
		performance of CPU scheduling algorithms.
		CO3.compare different memory management schemes and
36	Operating Systems	apply page replacement algorithms in virtual memory.
		CO4.apply deadlock handling techniques to prevent deadlocks
		and analyze the performance of different disk scheduling
		algorithms
		CO5.develop software/hardware based solutions for critical
		section problems and outline files and directory structures.
		CO1.design web pages using HTML5 and CSS3. CO2.develop dynamic web pages and perform form validations
		using Javascript.
		CO3.develop server side script to handle the given form data
37	Full Stack Application	using JSP.
	Development	
		CO4.perform CRUD operations on MySql database using PHP.
		CO5.perform various operations on constructing React elements
		with data.
		CO1.demonstrate the benefits of Biometric security and
		working process of matching
		CO2.identify the Algorithms used for interpretation in finger
1		scan technology

38 Biometrics ensure the security in the real world problems. CO4.apply the iris and voice scan biometric teel identification in real world applications. CO5.compare the functionality of various physic behavioral biometrics such as Hand Scan , Retin Keystroke scan and Signature scan . 39 Neural Networks And Fuzzy Systems CO1.outline Neural Networks learning techniqu CO3.apply fuzzy logic and reasoning to handle to solve engineering problems. COA experiment with embadded boards for eres	CO3.use the corresponding cloud services and APIs for selected IoT application

		CO5.design a solution for a given IoT application.
	1	CO1.analyze and formalize the problems as a state space, graph,
		or tree.
		CO2.use search algorithms to discover solution to a given
		problem.
		CO3.solve problems with uncertain information using
44	Artificial Intelligence	probabilistic reasoning.
		CO4.formalize sequential decision making using Markov
		decision process.
		CO5.apply reinforcement learning to take suitable action to
		maximize reward in particular situation.
		CO1.describe fundamentals, and functionalities of data mining
		system and data preprocessing techniques.
		CO2.analyze the performance of association rule mining
		algorithms for finding frequent item sets from the large
		databases.
45	Data Warehousing And Data	CO3.outline the data classification procedure by selecting
10	Mining	appropriate classification methods / algorithms.
		CO4.classify various clustering methods and algorithms on data
		sets to create appropriate clusters.
		CO5.apply appropriate web and text mining techniques for data
		analysis.
		CO1.compare protocol models (OSI, TCP/IP) and select
		suitable protocol for network design.
		CO2.design a network by deciding relevant multiplexing and
		switching technique to improve performance of the network.
	Computer Networks	CO3.apply flow control, error control techniques and protocols
16		to verify the correctness of data in the communicated network
46		and specify and identify deficiencies in MAC sublayer
		protocols.
		CO4.apply routing and congestion control algorithms to deliver
		data packets across the networks.
		CO5.use communication protocols like IP, TCP, UDP, DNS,
		HTTP, FTP across the Internet.
		CO1.list compilation process steps of a language and represent
		tokens using regular expressions.
		CO2.design a parser to verify the syntax of a programming
47	Principles Of Compiler Design	language.
		CO3.design syntax directed translation schemes for a given
		context free grammar
		CO4.construct symbol table to access identifier information and
		perform various operations on it.
	'	La

	1	CO5.apply code optimization techniques to enhance the
		efficiency of the intermediate code and generate code using
		generic code generation or DAG
		CO1.describe security goals and various attacks occurs in a
		network.
		CO2.compare and apply different encryption and decryption
	Cryptography And Network Security	techniques.
		CO3.compute cryptographic checksums and evaluate the
48		performance of different message digest and authentication
		algorithms.
		CO4.apply network and internet security protocols to secure E-
		mails, web content.
		CO5.analyze system security using various firewalls and
		intrusion detection techniques.
		CO1.outline a feed forward neural network to solve
		classification problems.
		CO2.train the neural network using back propagation algorithm.
49	Deep Learning	CO3.use deep neural networks to solve real life problems.
		CO4.solve classification and pattern problems using
		Probabilistic Neural Networks
		CO5.apply neural networks in Object recognition, sparse
		coding, computer vision, and natural language processing.
		CO1.apply the improvement strategies to see the inline growth
		in economic concerns of the project.
		CO2.develop project plans that address real time management
		challenges.
	Software Project Management	CO3.design efficient work break down structures that meet real
50		
		CO4.design effective software development plans to meet
		organizational needs.
		CO5.use software metrics to measure the quality of software
		projects and to gain insights of management issues related to the
		project.
		CO1.illustrate fundamental steps in digital image processing.
	Image Processing	CO2.make use of appropriate digital image enhancement
		techniques in spatial domain for real world problems.
51		CO3.apply suitable image segmentation and Compression
		techniques for an application.
		CO4.demonstrate Color image processing techniques.
		CO5.summarize different reshaping operations on the image
		and their practical applications.
		CO1.implement data link layer framing and error detection methods.
57	Computer Networks I ah	Internous.

		CO2.describe Usage of multiple tools for unit functions in a DevOps pipeline.
58	Devops Tools	CO3.illustrate various types of version control systems,
	-	continuous integration tools.
		CO4.elaborate on various tools to orchestrate, deployment,
		infrastructure management.
		CO5.outline Devops and Cloud work together.
	Computer Vision	CO1.illustrate fundamentals in computer vision.
		CO2.make use of appropriate boundary detection techniques for
		an application.
5 0		CO3.apply suitable techniques for texture feature extraction and
59		pattern recognition for an application.
		CO4.utilize the motion analysis techniques.
		CO5.examine different recognition techniques on the image and
		their practical applications.
		CO1.outline the fundamentals in E-Commerce frame work and
		describe consumer oriented applications.
		CO2.classify the various types of electronic and mobile payment
		methods and identify the risks.
60	M-Commerce	CO3.distinguish problems in Electronic Data Interchange (EDI),
00	M-Commerce	VAN and Supply Chain Management.
		CO4.describe various Mobile-Commerce applications and
		Mobile Banking Services.
		CO5.Ensure the security goals in the mobile network, Bluetooth
		and WLANs.
		CO1.show sensitivity to linguistic phenomena and an ability to
		model them with formal grammars.
		CO2.carry out proper experimental methodology for training
	Natural Language Processing	and evaluating empirical NLP systems.
61		CO3.manipulate probabilities, construct statistical models over
		strings and trees, and estimate parameters using supervised and
		unsupervised training methods.
		CO4.design, implement, and analyze NLP algorithms.
		CO4.design different language modeling Techniques
		CO1.develop script to exchange data between server and
	Modern Scripting Languages	browser using JSON.
		CO2.develop PERL scripts using arrays, hashes, control
		structures and subroutines.
62		CO3.create Ruby scripts using data types, arrays, hashes, control
		structures and classes.
		CO4.develop script to retrieve data from a database using PHP
		and AJAX
		CO5.create TCL scripts for simple problems.

63	Data Visualization Techniques	 CO1.describe the key techniques and theory behind data visualization CO2.classify various visualization systems and describe the methods used to spatial data to graphical depictions. CO3.use effectively the various visualization structures like tables, trees ,graphs/ networks, Text and Document. CO4.identify a wide variety of available visualization systems and its key features. CO5.analyze and Distinguish between visualization techniques for Line, Point and Region.
64	Blockchain Technologies	 CO1.demonstrate the foundation of the Block chain technology and understand the processes in payment and funding. CO2.identify the risks involved in building Block chain applications. CO3.outline legal implications using smart contracts. CO4.choose the present landscape of Block chain implementations and Understand Crypto currency markets. CO5.examine how to profit from trading crypto currencies.
65	Reinforcement Learning	CO1.enumerate the elements of Reinforcement Learning.CO2.solve the n-armed Bandit problem.CO3.compare different Finite Markov Decision Process.CO4.discuss about Monte Carlo Methods in solving real world problems.CO5.list the Applications and Case Studies of Reinforcement Learning.
66	Software Testing Methodologies	CO1.describe the basic concepts of software testingCO2.design test cases to test a software using black box testingCO3.apply white-box testing techniques to uncover bugs present in the program.CO4.perform verification and validation activities to reduce the propagation of bugs.CO5.use regression testing and software quality management to improve the quality of a software product.
67	Virtual And Augmented Reality	CO1.identify basic elements of virtual RealityCO2.describe various input and output devices required for VRexperience.CO3.classify human factors that affect VR experience.CO4.distinguish augmented reality from virtual reality.CO5.determine the object position and orientation in virtualspace.
		CO1.apply suitable LINUX commands to work in Hadoop environment.

68	Big Data Analytics Lab	CO2.use HDFS file structure and Map Reduce framework to
		solve complex problems.
		CO3.analyze data using Pig and Hive.
69	Data Science Using Python	CO1.import and export data.
		CO2.apply appropriate data collection and pre-processing
		methods.
	Lab	CO3.identify suitable data analysis Technique for given
		applications
		CO4.analyze data using data visualization techniques.

	R17 CE		
S.No.	Course Name	Course Outcomes	
5.110.		CO1. Listening to (and viewing) classroom lectures and other academic presentations with a reasonable degree of accuracy, understanding, and appreciation, and responding to them	
	Functional English	appropriately CO2. Speaking in academic (e.g. classroom discussions) and social contexts with a fair degree of fluency, accuracy and intelligibility, and with due attention to factors such as purpose, audience, context, and culture	
1		CO3. reading a wide range of informational and functional texts, including course books and reference materials, from print and non-print sources and using them for a variety of purposes CO4.writing for academic purposes (e.g. assignments, examination answers) in an	
		organized way following the rules of discourse and using vocabulary and grammar appropriately and accurately CO5.To develop in them the communication strategies and social graces necessary for	
		functioning effectively in social, academic, and other situations in which they may be called upon to use English	
		CO1.To understandthe concepts of eigenvalues and eigenvectors	
2	Linear Algebra & Differential Equations	CO2.To know the procedures to find the solutions of first and second order differential equations CO3. To understand different procedures to solve first order linear & non-linear	
		partial differential equations CO1.To impart the knowledge of corrosion, treatment methods of water and green	
3	Engineering Chemistry	synthesis of products. CO2. To enable the students to obtain the knowledge of refractories, nano materials and instrumental methods of analysis	
		CO1. To emphasize the use of flowcharts and pseudo code in problem solving CO2. To gain knowledge in C language	
4	Problem Solving Using C	CO3. To develop C Programs to solve problems.	
		CO4. To familiarize with the discrete components of a computer, MS Office	
_		CO1. To highlight the significance of universal language of engineers	
5	Engineering Drawing	CO2. To introduce the concepts of drawing 3-D objects in 2-D planes and vice versa with proper dimensioning and scaling.	
	Functional English Lab	CO1.the communication strategies and social graces necessary in order to function effectively in social and other situations in which they may be called upon to speak in English	
6		CO2. a greater awareness of English pronunciation and provides for focused practice with the sounds of English and intonation patterns improve their pronunciation skills and to enable them to speak with a reasonable degree of intelligibility.	
7	Engineering Chemistry Lab	CO1. To practice the chemical and instrumental methods of analysis for various parameters that are useful in determination of the quality of water	
		CO2. To know the preparation of Bakelite.	
8	Professional Communication	CO1.To gain the knowledge of Laplace and inverse Laplace transforms	
0	Professional Communication	CO2. To develop in them the interactional communication strategies and social graces which have the potential to add to the effectiveness of professional communication.	
9	Integral Transforms And Multiple Integrals	CO1.To gain the knowledge of Laplace and inverse Laplace transforms CO2. To understand the concept of Fourier Transforms CO3.To know vector integral theorems such as Green's, Gauss & Stoke's.	
10	Environmental Studies	CO1.To impart the basic knowledge about the environment and ecology CO2.To develop an attitude of concern for biodiversity and its conservation CO3.To assess the environmental impacts of developmental activities. CO4.To create awareness on environmental pollution and waste management.	
11	Engineering Physics	CO1.To solve oscillating systems problems CO2.To analyse crystal parameters to investigate crystal structures	

		CO1.To impart the basic concepts of force systems, free body diagram and equilibrium
		conditions
		CO2. To familiarize on calculating the geometric properties like centroid, moment of
		inertia of various sectional areas and masses and introduce the concept of friction and
12	Engineering Mechanics	virtual work.
		CO3. To develop the knowledge on basic principles of kinematics and kinetics with
		simple applications.
		CO4. To introduce applications on using work-energy principle and Impulsemomentum
		methods.
		CO1.Professional Communication (Lab) is a career-oriented programme. It seeks to
13	Professional Communication Lab	develop in the students the competence required to perform professional communication
15		tasks of increasing length and complexity, which can help them secure employment and
		perform successfully in their careers.
14	Computer Aided Drafting Lab	CO1. To understand the importance of CAD
		CO2. To enable the student learn the fundamentals of computer aided drafting
		CO1. To make the students gain practical knowledge to co-relate with the theoretical
	Engineering Physics Lab	studies
15		CO2.To impart skills in measurements
		CO3. To design and plan the experimental procedure and to record and process the results
16	Applied Mechanics Lab &	CO1. To impart knowledge on basic engineering applications.
	Building Trade Practice	CO2. To impart hands-on training on basic engineering trades.
		CO1.To introduce the concepts of stress, strain and elastic constants and their
		relations for use in elastic design of prismatic bars.
		CO2. To familiarize with shear force, bending moment and torsion and to claculate
17	Mechanics Of Solids	shear stresses and bending stresses developed for different sections of beams and shafts.
		CO3. To impart the knowledge on the principal stresses & principal strains and
		various Energy methods
		CO4 To introduce the methods for obtaining axial forces in the members of pin
		jointed plane trusses.
		CO1. To familiarize with static and dynamic aspects of fluids
18	Mechanics of Fluids	CO2. To impart knowledge on laminar flow, turbulent flow and dimensional analysis
		CO3. To introduce the methods for obtaining axial forces in the members of pin
	Building Materials And	jointed plane trusses. CO1. To learn about the nature, properties, classification and manufacturing process
	Construction	of building materials and familiarize with various methods of masonry
19	Construction	construction.
		CO2. To understand the knowledge of building components, finishings.
		CO1. To make understand the importance of surveying in civil engineering field
20	Surveying	CO2. To create awareness on various types of surveying and their instruments
		CO3. To create awareness on various types of surveying and their instruments
		CO1. To familiarize with the basic concepts of transmission systems, machine tools and
~ 1	Elements of Mechanical And	internal combustion engines
21	Electrical Engineering	CO2.To introduce the basic concepts of electrical circuits
		CO3. To familiarize with the operation of DC machines and A.C Machines
		CO1. To introduce building fundamentals and familiarize with planning principles of
22	Building Planning and Drawing	residential and public buildings
		CO2. To familiarise with different sign conventions and draw different views of abuilding.
23	Mechanics of Solids Lab	CO1. To introduce various stress and strain measuring equipment
23	Nicenames of Sonus Lab	CO2. To familiarize with various physical, mechanical and strength properties of various
		engineering materials. CO1. To familiarize with surveying equipments/ instruments like chain,compass,levelling
		instruments, theodolite and total station
24	Survey Field Work	
		CO2. To impart the knowledge on linear, angular measurement
		CO1.To understand the various numerical techniques
25	Numerical and Statistical	CO2.To introduce the concepts of probability and statistics
25	Methods	CO3. To know the importance of the correlation coefficient & lines of regression
	Inchious	cost to know the importance of the contraction coefficient & mics of regression

		CO4. To know sampling theory and principles of hypothesis testing.
		CO1. To familiarize with the procedures of obtaining slopes and deflections of determinate
26		beams.
	Starstand Anglania	CO2. To familiarize with the crippling loads in column and struts and slenderness ratio.
	Structural Analysis	CO3. To familiarize the concept of propped cantilevers and fixed beams.
		CO4. To describe the analysis of indeterminate beams by using Clayperon's Theorem and
		Slope-Deflection Method.
		CO1. To familiarize with the design principles of channels.
27	Hydraulics and Hydraulic	CO2. To impart knowledge on Uniform and Non-Uniform flow in open channels.
	Machines	CO3. To introduce the working principles of hydraulic machines.
		CO1.To introduce types, properties of cements and admixtures
		CO2.To build the knowledge on different types of aggregates
28	Concrete Technology	CO3. To impart setting and hardening characteristics of concretes.
		CO4. To familiarize with the method of Mix Design.
		CO1. To relate the importance of Geology to selection of site, materials and design of Civil
		Engineering Projects.
29	Engineering Geology and	CO2. To familiarize with the frameworks of GIS and Location Technologies.
2)	Geomatics	CO3. To introduce air-borne and space based imaging technologies and their working
		principles. CO1.To introduce basics of Civil Engineering concepts in the fields of surveying,building
20	Elemente of Civil Engineering	
30	Elements of Civil Engineering	materials, water resources, Water Supply, Sanitary, Electrical Worksin Building and
		Highway engineering.
		CO1. To impart knowledge on water supply, treatments and water distribution for all type
		of buildings
31	Building Services	CO2. To acquire principles and best practices for Solid waste management in residential
		units.
		CO3. To create awareness about the importance of electrical and mechanical services in
		buildings and fire safety
22	Electrical Materials	CO1. To introduce the concepts of dielectric and ferro magnetic materials
32	Electrical Materials	CO2. To impart knowledge on semiconductor materials.
		CO3. To familiarize with the required materials used for electrical applications.
		CO1.To introduce the basic concepts of control systems by developing mathematical
		models for physical systems
33	Control Systems Engineering	CO2. To familiarize with the time domain behavior of linear control systems.
		CO3. To impart knowledge on analytical and graphical methods to quantify stability of
		linear control systems.
		CO4. To introduce concepts on the state variable theory.
34	Elements of Manufacturing	CO1.To introduce the principles of manufacturing processes to convert materials into
	Processes	desired shapes and sizes.
		CO1. To introduce various components of an automobile and engine sub systems
		CO2. To familiarize with the various systems such as transmission system, steering system,
35	Automotive Engineering	suspension system, braking system, and safety systems.
		CO3. To impart knowledge on various safety systems of an automobile and emission
		norms.
		CO1. To familiarize with architecture of 8086 microprocessor and 8051 microcontroller.
36	Introduction to Microprocessors	
20	and Microcontrollers	CO2.To introduce the assembly language programming concepts of 8086 processor.
		CO3. To expose with various interfacing devices with 8086 using 8255.
		CO1. To introduce various analog and digital modulation and demodulation techniques
37	Fundamentals of Communications	CO2. To familiarize with various multiplexing schemes and Data communication protocols
51		
		CO3. To impart the standards and mechanisms of television systems
_		CO1. To introduce computer graphics applications and functionalities of various graphic
38	Computer Graphics	systems.
50		CO2.To familiarize with 2D and 3D geometrical transformations
		CO3. To disseminate knowledge on the visible surface detection and animation
	Object Oriented Programming	CO1.To familiarize with the concepts of object oriented programming.
39		contro faminarize with the concepts of object offended programming.

40	Systems Software	CO1.To familiarize with the implementation details of assemblers, loaders, linkers, and macro processors.
	+	CO1.To develop real time web applications
41	Web Programming	CO2. To get acquainted with skills for creating websites and web applications by learnin various technologies like HTML, CSS, JavaScript, XML, JSP and JDBC.
		CO1. To give a simple account of classical number theory, prepare students towards the
		concepts of Network Security and to demonstrate applications of number theory (such as
		public-key cryptography).
42	Mathematical Cryptography	CO2. To students will have a working knowledge of the fundamental definitions and
		theorems of elementary number theory, be able to work with congruences.
		CO3. To solve congruence equations and systems of equations with one and more
		variables.
		CO4. To students will also have an exposure to cryptography.
		CO1.To know the physics and applications of semi conductor
43	Semiconductor Physics	CO2. To understand fundamental principles and applications of the electronic and
		optoelectronic.
		CO1. To impart the knowledge on flow measurement through closed conduit/tank/channe
44	Fluid Mechanics and Hydraulic	
	Machines Lab	CO2.To familiarize with various losses in closed conduits.
		CO3. To familiarize with performance curves for various hydraulic turbines and pumps
		CO1. To develop the skill of testing the building materials like cement & aggregates.
45	Concrete Technology Lab	CO2.To impart the knowledge on properties of fresh concrete.
75	Coherete Teenhology Lab	CO3. To familiarize with the strength properties of hardened Concrete
		CO4. To introduce the concepts of non-destructive testing.
		CO1.To introduce with civilisations of Greece, Romes, traditions of islamic and asian.
46	Interior Design	CO2. To impart knowledge on design process, organising space in a building and
		sustainable design.
4.5	Building Bye Laws and Scientific	CO1. To familiarize with building bye laws and regulations.
47	Planning	CO2. To impart the knowledge of orientation and planning principles for buildings
		CO1. To impart knowledge of linear and non-linear data structures.
48	Data Structures	CO2. To familiarize with different sorting and searching techniques.
		CO1. To introduce the concept of analyzing the two hinged and three hinged parabolic
		arches.
		CO2.To impart knowledge on influence lines and moving loads
49	Theory of Structures	CO3. To familiarize with lateral load analysis using approximation methods
		· · · · · · · · · · · · · · · · · · ·
		CO4. To impart knowledge on solving indeterminate structures by Moment distribution, Kani's and matrix methods.
		IN and s and matrix methods
		CO1. To familiarize with soil formation and classification of soils.
50	Geotechnical Engineering	CO1. To familiarize with soil formation and classification of soils. CO2.To make understand vertical stress distribution in soils
50	Geotechnical Engineering	CO1. To familiarize with soil formation and classification of soils. CO2.To make understand vertical stress distribution in soils CO3. To introduce concepts of consolidation settlement and compaction control
50	Geotechnical Engineering	CO1. To familiarize with soil formation and classification of soils. CO2.To make understand vertical stress distribution in soils CO3. To introduce concepts of consolidation settlement and compaction control CO4. To impart knowledge on shear strength parameters.
50	Geotechnical Engineering	 CO1. To familiarize with soil formation and classification of soils. CO2.To make understand vertical stress distribution in soils CO3. To introduce concepts of consolidation settlement and compaction control CO4. To impart knowledge on shear strength parameters. CO1. To impart the knowledge of essential components of the hydrologic cycle
50	Geotechnical Engineering	CO1. To familiarize with soil formation and classification of soils. CO2.To make understand vertical stress distribution in soils CO3. To introduce concepts of consolidation settlement and compaction control CO4. To impart knowledge on shear strength parameters.
50		 CO1. To familiarize with soil formation and classification of soils. CO2.To make understand vertical stress distribution in soils CO3. To introduce concepts of consolidation settlement and compaction control CO4. To impart knowledge on shear strength parameters. CO1. To impart the knowledge of essential components of the hydrologic cycle
	Hydrology and Water Resources	 CO1. To familiarize with soil formation and classification of soils. CO2.To make understand vertical stress distribution in soils CO3. To introduce concepts of consolidation settlement and compaction control CO4. To impart knowledge on shear strength parameters. CO1. To impart the knowledge of essential components of the hydrologic cycle CO2. To provide an overview and understanding of Unit Hydrograph theory and its analysis.
50		 CO1. To familiarize with soil formation and classification of soils. CO2.To make understand vertical stress distribution in soils CO3. To introduce concepts of consolidation settlement and compaction control CO4. To impart knowledge on shear strength parameters. CO1. To impart the knowledge of essential components of the hydrologic cycle CO2. To provide an overview and understanding of Unit Hydrograph theory and its analysis. CO3. To familiarize with different methods of flood frequency analysis and flood routing
	Hydrology and Water Resources	 CO1. To familiarize with soil formation and classification of soils. CO2.To make understand vertical stress distribution in soils CO3. To introduce concepts of consolidation settlement and compaction control CO4. To impart knowledge on shear strength parameters. CO1. To impart the knowledge of essential components of the hydrologic cycle CO2. To provide an overview and understanding of Unit Hydrograph theory and its analysis. CO3. To familiarize with different methods of flood frequency analysis and flood routing CO4.To impart knowledge on groundwater movement and well hydraulics
	Hydrology and Water Resources	 CO1. To familiarize with soil formation and classification of soils. CO2.To make understand vertical stress distribution in soils CO3. To introduce concepts of consolidation settlement and compaction control CO4. To impart knowledge on shear strength parameters. CO1. To impart the knowledge of essential components of the hydrologic cycle CO2. To provide an overview and understanding of Unit Hydrograph theory and its analysis. CO3. To familiarize with different methods of flood frequency analysis and flood routing CO4.To impart knowledge on groundwater movement and well hydraulics CO5.To familiarize with the relationships between soil, water and plant and their
	Hydrology and Water Resources	 CO1. To familiarize with soil formation and classification of soils. CO2.To make understand vertical stress distribution in soils CO3. To introduce concepts of consolidation settlement and compaction control CO4. To impart knowledge on shear strength parameters. CO1. To impart the knowledge of essential components of the hydrologic cycle CO2. To provide an overview and understanding of Unit Hydrograph theory and its analysis. CO3. To familiarize with different methods of flood frequency analysis and flood routing CO4.To impart knowledge on groundwater movement and well hydraulics CO5.To familiarize with the relationships between soil, water and plant and their significance in planning an irrigation system
	Hydrology and Water Resources	 CO1. To familiarize with soil formation and classification of soils. CO2.To make understand vertical stress distribution in soils CO3. To introduce concepts of consolidation settlement and compaction control CO4. To impart knowledge on shear strength parameters. CO1. To impart the knowledge of essential components of the hydrologic cycle CO2. To provide an overview and understanding of Unit Hydrograph theory and its analysis. CO3. To familiarize with different methods of flood frequency analysis and flood routing CO4.To impart knowledge on groundwater movement and well hydraulics CO5.To familiarize with the relationships between soil, water and plant and their significance in planning an irrigation system CO1. To impart the knowledge of selecting sources of water with reference to quality and
	Hydrology and Water Resources Engineering	 CO1. To familiarize with soil formation and classification of soils. CO2.To make understand vertical stress distribution in soils CO3. To introduce concepts of consolidation settlement and compaction control CO4. To impart knowledge on shear strength parameters. CO1. To impart the knowledge of essential components of the hydrologic cycle CO2. To provide an overview and understanding of Unit Hydrograph theory and its analysis. CO3. To familiarize with different methods of flood frequency analysis and flood routing CO4.To impart knowledge on groundwater movement and well hydraulics CO5.To familiarize with the relationships between soil, water and plant and their significance in planning an irrigation system CO1. To impart the knowledge of selecting sources of water with reference to quality and quantity in a locality, for domestic application and drinking.
51	Hydrology and Water Resources Engineering Water and Waste Water	 CO1. To familiarize with soil formation and classification of soils. CO2.To make understand vertical stress distribution in soils CO3. To introduce concepts of consolidation settlement and compaction control CO4. To impart knowledge on shear strength parameters. CO1. To impart the knowledge of essential components of the hydrologic cycle CO2. To provide an overview and understanding of Unit Hydrograph theory and its analysis. CO3. To familiarize with different methods of flood frequency analysis and flood routing CO4.To impart knowledge on groundwater movement and well hydraulics CO5.To familiarize with the relationships between soil, water and plant and their significance in planning an irrigation system CO1. To impart the knowledge of selecting sources of water with reference to quality and quantity in a locality, for domestic application and drinking.
	Hydrology and Water Resources Engineering	 CO1. To familiarize with soil formation and classification of soils. CO2.To make understand vertical stress distribution in soils CO3. To introduce concepts of consolidation settlement and compaction control CO4. To impart knowledge on shear strength parameters. CO1. To impart the knowledge of essential components of the hydrologic cycle CO2. To provide an overview and understanding of Unit Hydrograph theory and its analysis. CO3. To familiarize with different methods of flood frequency analysis and flood routing CO4.To impart knowledge on groundwater movement and well hydraulics CO5.To familiarize with the relationships between soil, water and plant and their significance in planning an irrigation system CO1. To impart the knowledge of selecting sources of water with reference to quality and quantity in a locality, for domestic application and drinking.
51	Hydrology and Water Resources Engineering Water and Waste Water	 CO1. To familiarize with soil formation and classification of soils. CO2.To make understand vertical stress distribution in soils CO3. To introduce concepts of consolidation settlement and compaction control CO4. To impart knowledge on shear strength parameters. CO1. To impart the knowledge of essential components of the hydrologic cycle CO2. To provide an overview and understanding of Unit Hydrograph theory and its analysis. CO3. To familiarize with different methods of flood frequency analysis and flood routing CO4.To impart knowledge on groundwater movement and well hydraulics CO5.To familiarize with the relationships between soil, water and plant and their significance in planning an irrigation system CO1. To impart the knowledge of selecting sources of water with reference to quality and quantity in a locality, for domestic application and drinking. CO2.To introduce various treatment options available and their design principles for wate
51	Hydrology and Water Resources Engineering Water and Waste Water	 CO1. To familiarize with soil formation and classification of soils. CO2.To make understand vertical stress distribution in soils CO3. To introduce concepts of consolidation settlement and compaction control CO4. To impart knowledge on shear strength parameters. CO1. To impart the knowledge of essential components of the hydrologic cycle CO2. To provide an overview and understanding of Unit Hydrograph theory and its analysis. CO3. To familiarize with different methods of flood frequency analysis and flood routing CO4.To impart knowledge on groundwater movement and well hydraulics CO5.To familiarize with the relationships between soil, water and plant and their significance in planning an irrigation system CO1. To impart the knowledge of selecting sources of water with reference to quality and quantity in a locality, for domestic application and drinking. CO2.To introduce various treatment options available and their design principles for water treatment and wastewater treatment at the household and municipal level. CO3. To elucidate the various collection and disposal options available for water and
51	Hydrology and Water Resources Engineering Water and Waste Water	 CO1. To familiarize with soil formation and classification of soils. CO2.To make understand vertical stress distribution in soils CO3. To introduce concepts of consolidation settlement and compaction control CO4. To impart knowledge on shear strength parameters. CO1. To impart the knowledge of essential components of the hydrologic cycle CO2. To provide an overview and understanding of Unit Hydrograph theory and its analysis. CO3. To familiarize with different methods of flood frequency analysis and flood routing CO4. To impart knowledge on groundwater movement and well hydraulics CO5. To familiarize with the relationships between soil, water and plant and their significance in planning an irrigation system CO1. To impart the knowledge of selecting sources of water with reference to quality and quantity in a locality, for domestic application and drinking. CO2. To introduce various treatment options available and their design principles for wate treatment and wastewater treatment at the household and municipal level. CO3. To elucidate the various collection and disposal options available for water and wastewater, including the networks, layout, construction and maintenance.
51	Hydrology and Water Resources Engineering Water and Waste Water	 CO1. To familiarize with soil formation and classification of soils. CO2. To make understand vertical stress distribution in soils CO3. To introduce concepts of consolidation settlement and compaction control CO4. To impart knowledge on shear strength parameters. CO1. To impart the knowledge of essential components of the hydrologic cycle CO2. To provide an overview and understanding of Unit Hydrograph theory and its analysis. CO3. To familiarize with different methods of flood frequency analysis and flood routing CO4. To impart knowledge on groundwater movement and well hydraulics CO5. To familiarize with the relationships between soil, water and plant and their significance in planning an irrigation system CO1. To impart the knowledge of selecting sources of water with reference to quality and quantity in a locality, for domestic application and drinking. CO2. To introduce various treatment options available and their design principles for wate treatment and wastewater treatment at the household and municipal level. CO3. To elucidate the various collection and disposal options available for water and wastewater, including the networks, layout, construction and maintenance. CO1. To impact the knowledge on classification of cylinders based on their thickness and
51	Hydrology and Water Resources Engineering Water and Waste Water	 CO1. To familiarize with soil formation and classification of soils. CO2.To make understand vertical stress distribution in soils CO3. To introduce concepts of consolidation settlement and compaction control CO4. To impart knowledge on shear strength parameters. CO1. To impart the knowledge of essential components of the hydrologic cycle CO2. To provide an overview and understanding of Unit Hydrograph theory and its analysis. CO3. To familiarize with different methods of flood frequency analysis and flood routing CO4. To impart knowledge on groundwater movement and well hydraulics CO5. To familiarize with the relationships between soil, water and plant and their significance in planning an irrigation system CO1. To impart the knowledge of selecting sources of water with reference to quality and quantity in a locality, for domestic application and drinking. CO2. To introduce various treatment options available and their design principles for wate treatment and wastewater treatment at the household and municipal level. CO3. To elucidate the various collection and disposal options available for water and wastewater, including the networks, layout, construction and maintenance.

		CO3. To familiarize with principles of analyzing cables, suspension bridges and plastic
		theory
		CO1. To introduce spatial information technology fundamentals.
54	GIS and GPS	CO2.To narrate the progress from analog to digital spatial decision support systems
		CO3. To elaborate the applications of GPS in surveying
		CO1.To introduce students to the concept of 'Green' Building.
		CO2.To familiarize students with the 'voluntary environmental building rating systems'
55	Green Buildings	(VERS) operating in India.
		CO3. To communicate the logic behind the rating categories in IGBC, GRIHA,
		LEED, EDGE, and WELL rating systems.
		CO1.To introduce the importance of management in construction projects.
56	Construction Management	CO2.To familiarize with quality, safety and material management in construction projects.
		CO3. To explore environmental issues in construction project.
		CO1.To introduce the basic concepts and principles of remote sensing.
57	Geoinformatics	CO2. To familiarize with structure and function of Geographic Information Systems.
		CO3. To illustrate the multidisciplinary nature of Geospatial applications
		CO1.To communicate the importance of institutional sanitation in maintaining public
		health.
58	Environmental Sanitation	CO2.To introduce the strategies for maintaining healthy living and working
		environment.
		CO3. To delineate the role of environmental engineer in industrial environments.
		CO1. To familiarize with programming skills using basic MATLAB and its associated tool
59	Modeling and Simulation of	boxes.
	Engineering Systems	CO2. To impart knowledge on building SIMULINK and Graphical user interface.
		CO1. To familiarize with programming skills using basic MATLAB and its associated tool
60	Modeling and Simulation of	boxes.
	Engineering Systems	CO2. To impart knowledge on building SIMULINK and Graphical user interface.
		CO1. To introduce the working of power plants in power generation and layout of
61	Power Systems Engineering	substations.
		CO2. To familiarize with the concepts of corona, insulators and sag in overhead lines.
62	Elements of Mechanical	CO1.To familiarize with the principles of mechanical power transmission elements
63	Material Handling Equipment	CO1.To provide knowledge on materials handling equipment.
64		CO1. To familiarize with the electronic systems inside an automotive vehicle.
64	Automotive Electronics	CO2. To introduce the concepts of advanced safety systems
		CO1.To introduce lithography principles, mechanical sensors and actuators.
		CO2. To make it known the thermal sensors and actuators, magnetic sensors and actuators.
65	Introduction to MEMS	CO3. To present formally micro fluidic systems and chemical and bio medical micro
		systems.
		CO1. To familiarize with statistical methods to analyze data using classification, graphical
		and computational methods
66	Data Science	
		CO2. To introduce Data Wrangling approaches and descriptive analytics on large data sets.
		CO1. To introduce key elements of virtual Reality with the components in VR systems.
67	Virtual and Augmented Reality	CO2.To gain knowledge of various input and output devices required for interacting in
		virtual world and augmented reality.
68	Open Source Software	CO1. To impart the opportunities for open source software in the global market.
	1	CO2. To familiarize with different steps in implementing the open source.
69	Cyber Laws	CO1. To expose the need of cyber laws to prosecute cybercrimes in the society.
	-	CO2. To familiarize with Licensing Issues Authorities for Digital Signatures.
		CO1.To equip students with basic practical skills with sufficient theory.
70	Quality, Reliability and	CO2. To understand the principles involved in the application area.
	Operations Research	CO3. To develop the power of systematic thinking and reasoning, practical approach and
		exposition in the students.
		CO1. To introduce the tests for determining the dry density of soils.
71	Geotechnical Engineering Lab	CO2.To familiarize with different test procedures for obtaining shear strengthof soils.
, 1	Geolechnical Engineering Lab	CO3. To appraise the soil properties by compaction and consolidation process.
		CO4. To familiarize with the tests for finding out the permeability of soils.

		CO1.To verify the suitability of water for drinking, based on Indian Standards
72	Water and Waste Water	CO2. To estimate the strength of sewage in terms of biological parameters
	Engineering Lab	CO3. To identify the vital conditions for survival of aquatic life.
		CO1.To evaluate infrastructure development.
		CO2. To know PPP Procurement Process in India.
73	Infrastructure Development	CO3. To manage the risks associated with various infrastructure projects.
		CO4. To identify the critical issues in infrastructure financing.
74	Basics of Power Plant Engineering	CO1.To introduce the working principles of various power plants.
75	Object Oriented Programming	CO1. To familiarize with the concepts of object oriented programming
75	through JAVA	CO2.To impart the knowledge of AWT components in creation of GUI.
		CO1.To introduce the stability of earth slopes.
76	Foundation Engineering	CO2. To familiarize with lateral earth pressure and stability of retaining walls.
		CO3. To familiarize with load carrying capacity of shallow and deep foundations.
		CO1.To familiarize with different concepts in the field of Highway Engineering.
77	Highway Engineering	CO2.To acquire design principles of Highway geometrics and pavements
		CO3. To learn various highway construction and maintenance procedures.
		CO1.To familiarize with the different types of design philosophies and IS:456 - 2000
		provisions
		CO2.To introduce the concepts of limit state of collapse and serviceability for analysis and
78	Design of RC Structures	design of structural elements along with detailing and drawings
		CO3. To impart the knowledge on the design of shear, development length, deflection and
		cracking.
		CO1.To familiarize with numerical methods of Engineering analysis
		CO2. To impart the knowledge on ILDs of three hinged arches.
79	Advanced Structural Analysis	
		CO3. To familiarize with basic principles of matrix methods of structural analysis
		CO4. To introduce the basics of theory of elasticity.
		CO1.To introduce the concepts of Air Pollution and the control methods.
		CO2. To impart the knowledge of the Solid Waste generation problem
80	Environmental Pollution and Its	CO3. To familiarize the best practices for management of solid wastes adopted at the
	Control	service provider level.
		CO4. To elucidate noise pollution problems and emphasize the necessity to control them.
		CO1.To impart knowledge on ground water flow in confined and unconfined aquifers
		CO2. To familiarize with the principles involved in design and construction of wells.
81	Ground Water Development and	CO3. To provide awareness on improving the groundwater potential using various recharge
01	Management	techniques.
		CO4. To introduce the concept of saline water intrusion in coastal aquifers and its control
		measures.
		CO1.To impart the need of ground improvement techniques in improving the strength
		parameters of soils.
82	Ground Improvement Techniques	CO2.To familiarize with various dewatering methods
		CO3. To introduce the applications of reinforced earth, confinement systems and geo-
		synthetics
		CO1. To impart the knowledge of essential components of the hydrologic cycle
		CO2. To provide an overview and understanding of Unit Hydrograph theory and its
		analysis.
83	Hydrology	CO3. To familiarize with different methods of flood frequency analysis and flood routing.
		CO4.To impart knowledge on groundwater movement and well hydraulics
		CO5.To familiarize with the relationships between soil, water and plant and their
	Planning for Sustainable	significance in planning an irrigation system
84	Planning for Sustainable	CO1. To familiarize the concept of sustainable development
	Development	CO2.To introduce various components of sustainable development
		CO1. To introduce the concepts on working principles of electric drives used for different
85	Electrical and Hybrid Vehicles	hybrid electric vehicles.
		CO2. To familiarize with the different energy storage systems and their management
		strategies.

0.6		CO1. To provide an overview of different methods of power generation with a particular
86	Power Plant Instrumentation	stress on thermal power generation.
		CO2.To impart knowledge on the different types of controls loops.
87	Material Science	CO1.to understand the properties of engineering materials, so as to manipulate them for the desired engineering applications.
0.0		CO1. To study various types of non-conventional sources of energy and techniques used ir
88	Renewable Energy Sources	exploiting solar, wind, tidal and geothermal sources of energy and bio-fuels.
		CO1. To introduce different assistive technology devices
89	Assistive Technologies	CO2. To familiarize with the concepts of enhance speech communication and independent living.
		CO1.To introduce the basics of biological concepts and relate it to engineering.
		CO2. To familiarize with physiology of cardio-vascular system, respiratory system & the
90	Bio-Medical Engineering	elements of Patient Care Monitoring.
		CO3. To impart the knowledge on the patient monitoring displays, diagnosis & techniques
		CO1.To familiarize with defining own custom AngularJS directives that extend the HTMI
		language
91	Node and Angular JS	CO2. To introduce the concepts of client-side services that can interact with the Node.js
1		web server
		CO3. To understand the best practices for server -side JavaScript
		CO1.To understand security concepts, Ethics in Network Security.
		CO2. To familiarize with new algorithms (mathematical formulas) and statistical measures
		that assesses relationships among members of large data sets.
92	Cyber Security	CO3. To identify the vulnerability of the Internet systems and recognize the mechanisms of
		the attacks, and apply those to design and evaluate counter measure tools.
		CO4. To gain knowledge on security threats, and the security services and mechanisms to
		counter them.
		CO1. To familiarize with JQuery, JSON, PERL, Ruby, AJAX to develop client-side and
93	Scripting Languages	server-side web applications.
		CO1. To introduce plan and manage projects at each stage of the software development
94	Software Project Management	life cycle (SDLC).
		CO2. To impart effective software projects that support organization's strategic goals.
		CO1.To study and understand the systems which evolve randomly over time, especially in
95	Elements of Stochastic Processes	long run.
95	Elements of Stochastic Trocesses	CO2. To survey the important tools of stochastic processes.
		CO3. To model and solve engineering problems arising in real life situations
		CO1.To acquaint the students with the process and elements of academic writing.
		CO2. To help them gain accuracy in the academic writing tasks they will be called upon to
96	Academic Communication	perform as part of their graduate and postgraduate studies.
		CO3.To empower them to carry out academic writing tasks such as project report writing
		with success.
		CO1.To develop the drafting skills of the structural elements by using software
97	Structural Engineering Lab	CO2. To introduce various properties of concrete and concepts of Non-destructive testing
		CO3.To familiarize with effect of dynamic forces on a three storied building
		CO1. To develop the testing skills of the road aggregates
98	Highway Engineering Lab	CO2. To impart the knowledge on the properties of bitumen.
		CO3. To Study the Traffic characteristics.
		CO1. To introduce the concept of building management systems.
99	Smart Buildings and Automation	CO2. To emphasize the importance of automating the building operations for safety,
) <u>)</u>	Smart Dundings and Automation	health and economy.
		CO3. To demonstrate current trends in home automation.
		CO1. To introduce the importance of Building Information Modelling (BIM) in
100	Building Information Modeling	Architecture, Engineering and Construction (AEC) industry
100	Bunding mormation Modeling	CO2. To familiarise the use of BIM with owners, facility managers, architects, engineers
		and contractors.
		CO1. To familiarize the concepts of database systems and different issues involved in the
		database design.

101	Database management systems	CO2. To introduce how to write SQL for storage, retrieval and manipulation of data in a relational database.
102		CO1. To define the importance of project management (PM) and causes of failure in construction projects.
102	Project Management and Finance	CO2. To identify PM network objectives and techniques and basics of network analysis.
		CO1. To introduce the concept of estimate, types of estimate and estimating a work.
102	Estimation, Costing and	CO2. To build ability of calculating road and canal work quantities.
103	Valuation	CO3. To impart knowledge on different specifications of civil works.
		CO4. To familiarize with rate analysis, contracts and valuation.
		CO1. To familiarize with the types of structural steel sections, plastic analysis and IS code provisions.
104	Design of Steel Structures	CO2. To introduce the principles for design of tension members, compression members and elements of truss using I.S. code.
		CO3. To impart the design aspects of laterally supported beams, unsupported beams and welded plate girder in accordance with I.S. code provisions.
		CO1. To familiarize with the concept of prestressing and IS code provisions.
105	Pre-stressed Concrete	CO2. To impart the knowledge on analysis and losses of prestress
105	Pre-stressed Concrete	CO3. To introduce design procedures of pre-stressed concrete members under flexure and shear
	A loss of Free lation	CO1. To familiarize with advanced knowledge of foundations in various practices
106	Advanced Foundation Engineering	CO2. To appreciate the foundation practices in difficult soil conditions under different loading conditions
		CO1. To introduce fundamental knowledge of traffic engineering.
107	Traffic Engineering	CO2. To acquire design principles of traffic engineering.
107		CO3. To familiarize with various traffic issues including planning, safety, operation and control.
	In descent al Westernater	CO1. · To impart the knowledge of industrial wastes and their pollution potential.
108	Industrial Wastewater Management	CO2. To introduce manufacturing processes of different types of industries.
	Wanagement	CO3. To elucidate the high-level strategies adopted to deal with industrial effluents.
		CO1. To impart the design procedure for flat slabs and footings.
109	Advanced Design of RC Structures	CO2. To make understand the loading pattern and design procedure for silos and bunkers.
	Structures	CO3. To familiarize with I.R.C loads and their application on designing the R.C bridges.
		CO4. To introduce the design procedure of R.C water tanks.
		CO1. To familiarize with the design principles of hydraulic structures on permeable foundations.
110	Hydraulic Structures	CO2. To impart knowledge on various types of dams and selection of suitable type
		depending on site conditions
		CO3. To familiarize with the design principles of irrigation structures
111	Geosynthetics	CO1. To familiarize with geosynthetics.
		CO2. To impart knowledge on designing the geosynthetic material for various functions.
112	Disaster Preparedness and	CO1. •To provide an exposure to disasters, their significance and types. CO2. To familiarize with impacts of disaster key skills.
112	Planning	CO3. To impart the knowledge on different approaches of Disaster risk reduction.
113	Disaster Management	CO1. To familiarize with disaster occurrence, strategies and remedial measures.
113	2354501 management	CO1. To familiarize with durability aspects, quality of concrete causes of deterioration.
		CO2. To impart the knowledge on inspection and assessment of distressed structures,
114	Repair and Retrofitting	strengthen measures and demolition procedures.
	Techniques	CO3. To familiarize with various concrete materials for repairs, and various precautions
		during retrofitting.
		CO1. To familiarize with the concepts of evolutionary optimization
115	Modom Ontimization Technism	CO2. To introduce the principles of soft computing optimization algorithes such as Genetic
115	Modern Optimization Techniques	Algorithm, Particle Swarm Optimization, Differential Evolution and Ant Colony
		Optimization.
		CO1. To familiarize with the mechanics of train movement.
116	Electrical Power Utilization	CO2. To impart knowledge on various heating methods and laws of illumination
		CO3.To familiarize with the concepts of refrigeration and air-conditioning.

117	Green Engineering	CO1. To impart the knowledge needed to minimize impacts of products, processes on environment for sustainable development.
		CO1.To familiarize with the concepts of various NDE techniques to identify the defect in a
118	Non Destructive Evaluation	mechanical elements.
		CO1. To prototype the Smart objects and provides a holistic understanding of
		development Platforms, connected products of Internet of things (IoTs).
119	Cyber Physical Systems	CO2. To familiarize with real World IoT Design Constraints, Industrial Automation and
		Commercial Building Automation in IoT.
		CO1. To familiarize with the basic concepts of signals and systems.
120	Signals and Systems	CO2. To introduce various transform techniques on signals.
120	Signals and Systems	CO3. To develop an understanding of sampling and correlation techniques on signals.
121	Digital Forensics	CO1. To provide a comprehensive overview of digital forensic process.
	Dusiness Intelligence and	CO2. To familiarize with the different roles a computer in crime investigation.
122	Business Intelligence and	CO1. To identify the process of decision making and use of model for decision making.
	Decision Support Systems	CO2. To use various visualization tools for delivery of knowledge.
123	Adhoc and Sensor Networks	CO1. To acquire fundamental concepts of ad hoc networks
		CO2. To learn design considerations of wireless sensor networks.
124	Information Detrieval Systems	CO1. To provide the foundation knowledge in information retrieval.
124	Information Retrieval Systems	CO2. To familiarize about different applications of information retrieval techniques in the Internet or Web environment.
125	E	
125	Fuzzy Logic	CO1. To impart the knowledge of fuzzy set theory and its applications in Engineering.
	Computer Applications in Civil	CO1. To familiarise with programming languages to solve the civil engineering problems
126	Engineering Lab	CO2. To introduce the concept of designing structures by using software.
		CO3. To impart the knowledge on Arc GIS software in solving civil engineering problems
		CO1. To impart the knowledge on contract documents and specifications
127	Project Scheduling and Contracts	CO2. To illustrate the Methodology of scheduling for activities and resources.
12/	Project Scheduling and Contracts	CO3. To distinguish scheduling methods and contracts
		CO4. To address the need of tender, estimation and bidding process.
120		CO1. To familiarize with various methods of optimization, decision making methods and
128	Optimization Techniques	design of civil engineering systems structural members.
		CO1. To understand entrepreneurial process and its significance in economic development
		of a nation.
129	Entrepreneurship	CO2. To provide awareness about entrepreneurship.
		CO3. To develop idea generation, creative and innovative skills.
		CO4. To design business plan.
		CO1. To familiarize with basics of structural dynamics and earthquake engineering.
130	Earthquake Resistant Design of	CO2 To import the local day of each mine and designing each such a printed at structure
130	Structures	CO2. To impart the knowledge of analyzing and designing earthquake resistant structure
		CO3. To introduce the seismic planning concepts and design principles of shear wall
		CO1. To familiarize with various components, their functions and design principles of
	Logistics Infrastructure	geometry in a railway track.
131	Logistics Infrastructure Engineering	CO2. To introduce the design principles of airport geometrics and pavements.
		CO3. To impart the knowledge of planning, construction and maintenance of Docks and
		Harbours.
		CO1.To familiarize with the fundamentals of finite element method.
122	E's'te Elson of Mathematic	CO2. To impart knowledge of solving one dimensional and two dimensional problems by
132	Finite Element Methods	FEM.
		CO3. To introduce the concepts of axi-symmetric and iso-parametric formulation.
	Design and Description fluid (CO1.To impart the knowledge and principles of hydraulic structures.
133	Design and Drawing of Irrigation	CO2. To impart the knowledge on design principles of irrigation structures.
	Structures	CO3. To enhance partical design concept.
		CO1. To impart the concepts of designing water tanks, bridges, transmission line towers
1.24		and chimneys.
134	Pre-Engineered Buildings	CO2. To familiarize on plastic behavior, plastic moment and plastic mechanism of steel
		structures like simple beams and portal frames.
<u> </u>		CO1. To introduce the various procedures for travel demand estimation.
		CO2. To impart the knowledge on various data collection techniques for origin and
	· · · · · ·	destination data.
1.1.2.5	IIIrhan Transportation Planning	

Orban Transportation Framming	CO3. To familiarize with various models and techniques for trip generation,
	tripdistribution, mode choice and traffic assignment.
	CO4. To introduce alternative urban transport network plans.
	CO1.To impart knowledge on free and forced vibrations with and without damping for
	single degree freedom system.
Soil Dynamics and Machine	CO2. To familiarize field and laboratory methods of determination Dynamic Soil
-	Properties.
1 oundations	CO3. To introduce the designconsiderations of foundations for reciprocatingmachine,
	impact type and rotary type.
	CO1. To familiarize with various methodologies of EIA for project assessment.
Environmental Impact	
Assessment	CO2. To distinguish impact prediction, assessment based on significance and preparation of audit report.
	EEE
Course Name	Course Outcomes
	CO1: speak with a reasonable degree of fluency using communication strategies as well
	conventions of politeness and courtesy
	CO2: listen to short audio and video clips in both standard Indian accent and native
Functional English	English accent and gain both understanding of messages and sensitivity to native- speake
	CO3: read fluently comprehending texts of different kinds
	CO4: write coherent paragraphs and technical reports
	CO5: guard against mistakes Indians typically make in their speech and writing in Englis
	CO1: use the concepts of eigenvalues and eigenvectors in solving engineering problems
	COT: use the concepts of eigenvalues and eigenvectors in solving engineering problems
Linear Algebra & Differential	CO2: apply 1st & 2nd order differential equations to solve various engineering problems
Equations	CO3: apply the techniques of partial differentiation to find maxima and minima of
	two/three variables
	CO4: solve first order linear & non-linear partial differential equations.
Engineer And Society	CO1: comprehend different moral perspectives and one's own Ethical standards
	CO2: understand the concept of safety and risk
	CO3: explain different initiatives to protect nature
	CO4: identify the role of Information Technology
	CO5: understand different types of infringement of Intellectual Property Rights
	CO6: analyze the importance of Entrepreneurship
	CO1: explain the working of lead acid battery, nickel - cadmium battery, lithium ion
	battery and fuel cells and to explain the applications of sensors and biosensors
Applied Chemistry	CO2: explain about new generation photo voltaic cells
	CO3: apply a suitable method of water treatment depending on the quality requirement
	CO4: explain the methods of synthesis of liquid crystals, nano materials properties and
	applications of CNTs and quantum dots
	CO5: explain properties and engineering applications of fibre reinforced plastics,
	conducting polymers and bio degradable polymers
	CO6: explain the principles and working of spectrophotometer and flame photometer for
	the determination of a given ion in a given solution
	CO1: design flowcharts and pseudo code for solving problems
	CO2: understand C tokens and control statements
Problem Solving Using C	CO3: gain knowledge on arrays, strings, pointers, functions, structures and files.
	CO4: use C language for solving problems
	CO5: self-learn advanced features of C
	CO1: apply principles of drawing in representing dimensions of an object.
Engineering Drawing	CO2: construct polygons and conical curves.
	CO3: draw projections of points, lines and planes
Engineering Drawing	1005. draw projections of points, nice and planes
Engineering Drawing	CO4: draw projections of solids in different positions
Engineering Drawing	CO4: draw projections of solids in different positions.
Engineering Drawing	CO5: convert orthographic views into isometric views and vice-versa.
Engineering Drawing	
	Soil Dynamics and Machine Foundations Environmental Impact Assessment Course Name Functional English

7	Functional English Lab	CO2: check the pronunciation of words in a dictionary using their knowledge of phonemic
		symbols CO3: speak English with adequate attention to stress, rhythm, and intonation
		CO4: speak without their pronunciation being marred by regional peculiarities, achieving
		thereby greater intelligibility in their communication with non-Telugu speakers of English
		CO1: test the quality parameters of water by volumetric and instrumental methods
0		CO2: to operate the sensors for testing the water quality
8	Applied Chemistry Lab	CO3: synthesize phenol – formaldehyde resin (Bakelite).
		CO4: operate spectrophotometer and determine the concentration of Ferric Iron in a given
		solution CO1: speak with a reasonable degree of fluency and accuracy in professional
		communication situations (such as arriving at a consensus through discussion, making a
		presentation, and taking part in a telephone conversation)
		presentation, and taking part in a telephone conversation)
9	Professional Communication	CO2: listen to short audio and video clips in native English accent (British and American), and gain both understanding of messages and sensitivity to native-speaker accents
,		CO3: read fluently, comprehending texts of different kinds using multiple strategies and
		higher-order skills
		CO4: produce written discourses of different kinds
		CO5: guard against grammatical errors Indians typically make in their speech and writing
		in English
		CO1: apply Laplace transforms to find the solutions of ordinary differential equations
	Integral Transforms And Vector	CO2: express a function in Fourier series and in Fourier integral form
10	Calculus	CO3: apply the concepts of vector differentiation and integration to the surface and volume
		integrals
		CO1: describe the history and classify elements of electrical engineering
		CO1: describe the history and classify elements of electrical engineering CO2: apply various circuit laws to analyze the electrical circuits.
11	Elements Of Electrical Circuits	
		CO3: analyze the steady state behavior of DC and AC circuits.
		CO4: apply network theorems to analyze the electrical circuits
		CO1: explain construction and working of laser
		CO2: relate the principles of propagation of light in optical fibers for applications in
10	Cali 1 State Dhaming	communications
12	Solid State Physics	CO3: identify conductivity mechanism in semiconductors
		CO4: determine types of polarization and classius-mossoti relation
		CO5: Differentiate classical and quantum free electron theories
		CO6: derive orbital and spin contribution for magnetism
		CO1: understand the role of a citizen in protection of environment
		CO2: analyze functional attributes of an ecosystem
13	Environmental Studies	CO3: enumerate the values of biodiversity
		CO4: identify appropriate processes to control pollution
		CO5: identify waste management practices
		CO6: understand various stages of Environmental Impact Assessment (EIA)
		CO1: determine the resultant of the given force systems.
		CO2: analyze force systems using equations of equilibrium
	Elements Of Mechanical	CO3: determine centroid of areas and calculate the moments of inertia of areas
14	Engineering	CO4: determine stresses and strains in bars subjected to loads
	Lingineering	CO5: determine hydrodynamic force developed by impact of jets on various plates
		CO6: analyze the working of hydraulic turbines
		CO7: analyze the working of hydraulic pumps
		CO1: enhance the effectiveness of their communication through body language
		CO2: take part in interactional communication (i.e. communication that serves the purpose
		of social interaction or small talk) with fluency
		CO3: take part in transactional communication (i.e. communication that serves the purpose
		of carrying out functions such as giving directions, complaining, and apologizing) with
		fluency
	Professional Communication Lab	CO4: speak professionally in telephone conversations

IJ	11 IUICSSIUIIAI CUIIIIIUIIICAUUII LAU	
		CO5: make effective presentations using a range of strategies, including a good
		organization of the content, impressive opening and closing, the use of suitable visual aids
		the use of stories/anecdotes to illustrate a point, effective use of body language, and good
		handling of the question-and-answer session
		CO6: take part in group discussions and debates successfully
		CO7: answer questions at an elementary level in job interviews
		CO8: use team-building skills with impact in different situations
		CO1: identify energy gap of a semiconductor
		CO2: draw characteristic curves to estimate thermal coefficient of a thermsitor
1.6	Solid State Physics Lab	CO3: observe self timer and tuning nature of passive components like RC,LCR
16		CO4: verify magnetic field along the axis of a circular coil.
		CO5: determine frequency of AC and unknown tuning fork
		CO6: calculate light gathering power of optical fiber
		CO7: estimate wavelength of unknown source
		CO1: determine the performance of D.C generator for various operating conditions.
		CO2: find the performance characteristics of various types of D.C motors.
		CO3: select suitable speed control and testing methods of D.C motor for various
17	Dc Machines And Transformers	applications
1,	De Machines And Hunstonners	CO4: find the performance specifications of a single-phase transformer for various
		loading conditions.
		CO5: describe the operation of single phase and three phase transformers for various
		operating conditions
		CO1: quantify the specifications pertaining to electrical resonance.
		CO2: analyze three - phase circuits with both balanced and unbalanced supplies and / or
10	Electric Circuit Analyzia	loads
18	Electric Circuit Analysis	CO3: determine the transient behavior of R-L, R-C and R-L-C circuits for different
		excitations.
		CO4: characterize two- port networks with alternative descriptions.
		CO1: Identify V-I characteristics of Diodes, BJT, MOSFET
		CO2: analyze the biasing circuits of BJT and MOSFETs
19	Analog Electronics	CO3: develop small signal models for BJT and MOSFET.
		CO4: Differentiate various Feedback connection types.
		CO5: design oscillator circuits using BJTs
		CO1: identify different components of a thermal power station.
		CO2:describe the operation of various components of a nuclear power station.
		CO3: distinguish between the operation of hydro and gas power plants.
20	Power System – I	CO4: develop the layout of a substation
		CO5: analyze the significance of various factors for economic analysis of power generation
		CO6: select the suitable tariff method for various consumers
		CO1: demonstrate various commands in MATLAB programming.
		CO2: analyze a mathematical problem and select a suitable numerical technique to
	Numerical Methods With	implement it in MATLAB programming.
21	Computer Application	CO3: construct an interpolating polynomial for the given data using MATAB.
		CO4: find derivatives and integrals by using numerical techniques using MATLAB
		CO5: utilize Method of least squares to fit a curve for the given data using MATLAB
		CO1: Determine the moment of force experimentally
		CO2: Determine the entroid of plane lamina
22	Mechanical Engineering Lab	CO3: Determine the modulus of elasticity experimentally
		CO4: Select appropriate pump/turbine for suitable application
		CO1: Verify the applicability of network theorems to practical electrical circuits.
		CO2: Specify and test RLC series and parallel resonant circuits.
23	Electric Circuits Lab	CO3: Evaluate the time constant of simple rc and rl circuits.
	Electric Circuits Lab	CO4: Interpret /correlate physical observations and measurements involving electrical
		circuits to theoretical principles.
		CO5:Measure active and reactive power flows for a given electrical installation
		CO1: Identify various electronic components and basic electronic measuring instruments
		and other lab equipment.
		CO2: Verify the I-V characteristics of junction diode, zener diode, MOSFET, BJT.

2 7	Analog Electronics Lau	CO3: Test the Zener voltage as voltage regulator, BJT voltage-divider bias and using it as
		an amplifier.
		CO4: Verify the functionality of feedback amplifiers and oscillator circuits.
		CO1: Design various logic circuits using Boolean laws.
25	Digital Circuit Design	CO2: Design combinational and sequential logic circuits
25		CO3: Gain the knowledge of PLDs.
		CO4: Develop digital circuits using HDL
		CO1: Develop mathematical models for physical systems.
		CO2: Employ the time domain analysis to quantify the performance of linear control
•	Control Systems	systems and specify suitable controllers
26		CO3: Quantify time and frequency domain specifications to determine stability margins
		CO4: Apply state variable theory to determine the dynamic behavior of linear control
		systems
		CO1: Apply managerial economic concepts in business decision making
		CO2: Identify the influencing factors of demand for a product
		CO3: Categorize production with respect to time and cost
27	Engineering Economics And	CO4: Relate the market structures and pricing to a product.
21	Project Management	CO5: Establish the suitable business organization with available resources.
		CO6: Identify the importance of project management
		CO7: Apply network concepts in business decision making
		CO1: calculate various performance parameters of a three-phase induction motor.
		CO2: select/identify various starting and speed control methods of three-phase induction
• •	Induction And Synchronous	motor
28	Machines	CO3: describe the constructional details and working principles of single phase induction
		motor and synchronous machines.
		CO4: determine the performance characteristics of synchronous machine.
		CO5: describe the parallel operation of alternator with infinite bus bars.
		CO1: determine electric field and potential for symmetrical charge configuration.
		CO2: distinguish between the conduction and convection currents and determinethe
29	Flootnome anotic Fields	dielectric boundary conditions
29	Electromagnetic Fields	CO3: Compute magnetic fields for symmetric current distributions.
		CO4: quantify the magnetic forces and torque produced by currents in magnetic fields.
		CO5: apply maxwell's equations for time invariant fields and time variant fields.
		CO1: Learn the digital circuit concepts.
30	Digital Circuit Design Lab	CO2: Design the digital circuits
		CO3: Develop digital circuits using CAD tools
		CO1: Select the appropriate apparatus for determining the performance of DC machines
		and transformers based on the capacity experimentally.
31	Electrical Machines–I Lab	CO2: Determine the equivalent circuit parameters of transformers experimentally.
51		CO3: Compute the performance characteristics of transformers and DC machines through
		suitable tests.
		CO1: classify the signals and various operations on signals
		CO2: perform Fourier analysis on the signals
		CO3: analyze the various systems.
20		
32	Signals And Systems	CO4: perform correlation operational on signals.
32	Signals And Systems	CO5: apply the various sampling techniques on continuous signals.
32	Signals And Systems	CO5: apply the various sampling techniques on continuous signals. CO6: analyze the various continuous time signals through transformation (Fourier and
32	Signals And Systems	CO5: apply the various sampling techniques on continuous signals. CO6: analyze the various continuous time signals through transformation (Fourier and Laplace) techniques.
32	Signals And Systems	 CO5: apply the various sampling techniques on continuous signals. CO6: analyze the various continuous time signals through transformation (Fourier and Laplace) techniques. CO1: estimate the inductance and capacitance for different conductor configurations.
32	Signals And Systems	CO5: apply the various sampling techniques on continuous signals. CO6: analyze the various continuous time signals through transformation (Fourier and Laplace) techniques.
32	Signals And Systems	 CO5: apply the various sampling techniques on continuous signals. CO6: analyze the various continuous time signals through transformation (Fourier and Laplace) techniques. CO1: estimate the inductance and capacitance for different conductor configurations. CO2: assess the performance of short & medium transmission lines.
32	Signals And Systems	 CO5: apply the various sampling techniques on continuous signals. CO6: analyze the various continuous time signals through transformation (Fourier and Laplace) techniques. CO1: estimate the inductance and capacitance for different conductor configurations. CO2: assess the performance of short & medium transmission lines.
32	Signals And Systems Power Systems - II	 CO5: apply the various sampling techniques on continuous signals. CO6: analyze the various continuous time signals through transformation (Fourier and Laplace) techniques. CO1: estimate the inductance and capacitance for different conductor configurations. CO2: assess the performance of short & medium transmission lines. CO3: analyze the performance of long transmission lines and the effect of surge impedant loading.
		 CO5: apply the various sampling techniques on continuous signals. CO6: analyze the various continuous time signals through transformation (Fourier and Laplace) techniques. CO1: estimate the inductance and capacitance for different conductor configurations. CO2: assess the performance of short & medium transmission lines. CO3: analyze the performance of long transmission lines and the effect of surge impedan loading. CO4: select a suitable insulator for a particular operating voltage, configuration and best
		 CO5: apply the various sampling techniques on continuous signals. CO6: analyze the various continuous time signals through transformation (Fourier and Laplace) techniques. CO1: estimate the inductance and capacitance for different conductor configurations. CO2: assess the performance of short & medium transmission lines. CO3: analyze the performance of long transmission lines and the effect of surge impedant loading. CO4: select a suitable insulator for a particular operating voltage, configuration and best method to improve string efficiency

CO5: evaluate the sag and tension of transmission line for various configurations under the
		 CO5: apply the various sampling techniques on continuous signals. CO6: analyze the various continuous time signals through transformation (Fourier and Laplace) techniques. CO1: estimate the inductance and capacitance for different conductor configurations. CO2: assess the performance of short & medium transmission lines. CO3: analyze the performance of long transmission lines and the effect of surge impedant loading. CO4: select a suitable insulator for a particular operating voltage, configuration and best method to improve string efficiency

34	Electrical Measurements And Instrumentation	CO3: determine the parameters of electrical circuits using suitable measuring instrument
		CO4: select a suitable transducer for measuring non-electrical physical quantities
		CO5: analyse the operation of various digital meters and specify suitable digital meters
		measuring electrical parameters.
		CO1: identify suitable circuit breaker and relay for a particular application
		CO2: describe the operating principles of various types of relays.
35	Switch Gear And Protection	CO3: select an appropriate protection scheme for generator and transformer
		CO4: choose an appropriate protection scheme for transmission line and bus-bar.
		CO5: analyze various methods of neutral grounding.
		CO1: use the concepts of probability in different real time problems.
		CO2: use probability distributions in appropriate scenario.
20	Probability And Fuzzy	CO3: distinguish between crisp set and fuzzy set.
36	Mathematics	CO4: compose the operations on fuzzy sets to characterize the belongingness of elemen
		in the sets
		CO5: construct fuzzy relations to draw inferences
		CO6: apply fuzzy logic to control automatic engineering systems.
		CO1: describe the characteristics of d.c. servo motors, a.c. servo motors, synchros and
		magnetic amplifier
37	Control Systems Lab	CO2: employ p, pi, pd and pid controllers.
57	Control Systems Lab	CO3: design lag, lead and lag–lead compensators. CO4: control the temperature using pid controller.
		CO5: determine the transfer function of d.c. motor and d.c. generator
		CO6: verify the boolean expressions using programmable logic controller.
		CO1: estimate the performance of induction motors and synchronous machines.
		CO2: describe the operational behaviour of the induction motor under various loading
		conditions.
38	Electrical Machines – II Lab	CO3: determine the parameters of synchronous machine.
		CO4: operate an alternator in parallel with infinite bus bar
		CO5: find operational characteristics of three phase transformer.
		CO1: select suitable semiconductor devices for various power converters.
		CO2: analyze the performance of controlled and uncontrolled single- phase and three-
		phase converters.
39	Power Electronics	CO3: employ suitable ac voltage controllers and cyclo-converters for a particular indus
		applications.
		CO4: realize dc-dc converters without electrical isolation.
		CO5: develop control methods for inverters
		CO1: recall and apply a basic concept of digital fundamentals to Microprocessor based
	Microprocessors,	personal computer system.
40	Microcontrollers And Its Applications	CO2: identify a detailed s/w & h/w structure of the microprocessor and microcontroller
		CO3: illustrate how the different peripherals (8255) are interfaced with Microprocesson
		CO4: interface various I/O devices to the 8051 microcontroller.
		CO5: know the ARM philosophy
		CO1: Distinguish between the general computing system and the embedded system.
41	Embedded System Design	CO2: Differentiate general purpose processors and single purpose processors.
		CO3: Model different state machines and concurrent process.
		CO4: Specify different design technologies of software and hardware design.
		CO1: characterize the MOS devices
42	Principles of VLSI Design	CO2: explore CMOS process technology
		CO3: draw layouts
		CO4: apply design techniques and testing and verification principles for VLSI circuits
		CO1: Apply the knowledge of Mathematics in analyzing an Engineering problem.
		CO2: Develop an optimization problem in standard form and assess the optimality of a
43	Engineering Optimization	solution.
τJ	Engineering Optimization	CO3: Analyze multi objective and multidisciplinary optimization problems. CO4: Construct algorithm for constrained and unconstrained nonlinear optimization
		problem of multiple variables.

		CO1: Acquire the knowledge of assembly language programming using 8086
	Mismannasanan And	microprocessor
44	Microprocessor And Microcontroller Interfacing Lab	CO2: Perform various arithmetic and shift operations with 8086 based system.
		CO3: Interface various I/O modules with 8086 based system.
		CO4: Implement various real time applications using 8051.
		CO1: apply the programming skills to analyze the behavior of linear control system using
		MATLAB.
		CO2: analyze the behavior of the passive circuits through network theorems using
	Electrical Systems Simulation Lab	SIMULINK.
45		CO3: investigate the stability, controllability and observability of the given control system
		CO4: design a pid controller through simulation.
		CO5: analyze the behavior of various electrical machines and power electronic converters
		CO6: determine the parameters of a transmission line.
		CO1: identify the measuring instruments used for measuring electrical quantities.
		CO2: select appropriate measuring instrument with range for measurement of various
		electrical quantities.
46	Electrical Measurements And	CO3: select appropriate instrument for measurement of power, energy
-0	Instrumentation Lab	CO3: select appropriate instrument for incastientent of power, energy CO4: calibrate Ammeter, Volt meter
		CO5: select appropriate Transducer for the measurement of strain.
		CO6: measure the Inductance and Capacitance values
		CO1:distinguish various load models in the distribution system
		CO2: describe the primary feeder ratings and voltage levels.
47	Electrical Distribution Systems	CO3: design an optimum location of the substation
т/	Electrical Distribution Systems	CO3: design an optimum location of the substation CO4: analyze the distribution system and its associated coordination procedures
		CO5: select appropriate voltage control method in the distribution systems
		CO1:analyse the behavior of dielectric material under Different circumstances
		CO2: demonstrate an understanding of high voltage engineering techniques.
		CO3: conduct analysis of industrial equipment.
48	High Voltage Engineering	CO4: identify the most suitable equipment for performing specific testing on high voltage
-0		applications.
		CO5:perform basic AC, DC, impulse voltage and partial discharge tests on high voltage
		equipment and insulation systems in the laboratory environment.
		CO1:describe various electric heating and welding methods
		CO2:design illumination systems for residential, commercial and industrial
49	Utilization Of Electrical Energy	CO3:analyze various speed time curves of electric traction.
т <i>)</i>	Cullization of Electrical Energy	CO3.analyze various speed time curves of electric fraction.
		traction
		CO1:Use modern tools
		CO2:Work as individual and in a team
50	Project	CO3: Analyze critically
		CO4:Identify and solve problems
		CO1:Apply the knowledge of FACTS devices for enhancing power handling capacity in
		the transmission network
		CO2:Demonstrate the knowledge and understanding of the fundamental principles and
	Flexible Ac Transmission Systems	control practices associated with FACT controllers.
51		CO3:Describe different types of FACTS controllers
		CO4:Determine the operational related problems of transmission system and suggest the
		remedial measures.
		CO5:Select an appropriate FACTS controller to meet specified performance requirements
		CO1: analyze the operation of converter controlled electrical drives with active and passive
	Power Semiconductor Drives	loads
		CO2: realize the voltage and current waveforms of converter fed drives
52		CO3: adopt the application of chopper for four quadrant operation of DC drives
52		CO4:apply the scalar control and slip power control schemes to asynchronous motor drives
		CO5:describe the inverter-fed control of synchronous motor and its closed loop control
		10 contraction and inverter fea control of synemonous motor and its closed loop control

		CO1:evaluate optimal generation schedule with and without losses.
		CO2:compute loss coefficients and transmission losses.
53	Power System Operation And Control	CO3: find the solution for short term hydrothermal scheduling problems
55		CO4:determine the steady state changes in frequency in single area and two area load
		frequency control.
		CO5:suggest suitable voltage control method for different applications.
		CO1:describe the per unit system of power system.
		CO2:apply the concepts of addition or removal of element in the power system for
		determining the impedance matrix.
54	Douvon System Analyzia	CO3: formulate and solve the power flow problem of power system
54	Power System Analysis	CO4:develop and solve positive, negative and zero sequence networks for systems
		consisting of machines, transmission lines and transformers
		CO5:determine the fault voltages and currents for various faults.
		CO6:analyze the stability of power system under various disturbances
		CO1:plot the characteristics of various power semiconductor switches.
		CO2:trigger and commutate the SCR using various methods
55	Power Electronics Lab	CO3:analyse and test the operation of simple power electronic circuits.
55	I ower Electionics Eab	CO4:operate the given drive in all four quadrants.
		CO5:analyse the performance of PWM converter.
		CO6:perform closed loop control of DC motor
		CO1:determine the sub transient reactance of a Salient Pole Machine.
		CO2:verify the characteristics of the over voltage and over current relay
56	Power Systems Lab	CO3:analyze the importance of transmission line parameters
		CO4:describe the Ferranti effect and surge impedance loading.
		CO5:plot the characteristics of PV Module

	Engineering Oraphics	CO2. To impart basic knowledge and skills required to prepare engineering drawings
		CO1.the communication strategies and social graces necessary in order to function
7		effectively in social and other situations in which they may be called upon to speak in
	Errortional English Lab	English
	Functional English Lab	CO2.a greater awareness of English pronunciation and provides for focused practice with
		the sounds of English and intonation patterns improve their pronunciation skills and to
		enable them to speak with a reasonable degree of intelligibility
		CO1.To make the students gain practical knowledge to co-relate with the theoretical
		studies.
8	Engineering Physics Lab	CO2.To impart skills in measurements
		CO3.To design and plan the experimental procedure and to record and process the results
		CO1.To equip the students with common employability skills (the skills required for
		gaining employment and performing successfully in different careers) which can enable
9	Professional Communication	them to perform communication tasks of increasing length and complexity
9	rioressional Communication	CO2. To develop in them the interactional communication strategies and social graces
		which have the potential to add to the effectiveness of professional communication
10	Integral Transforms and Multiple	CO1.To gain the knowledge of Laplace and inverse Laplace transforms
10	Integrals	CO2. To understand the concept of Fourier Transforms
		CO3.To know vector integral theorems such as Green's, Gauss & Stoke's
		CO1.To understand the Ethics and Human Values
		CO2.To familiarize with the rights and responsibilities of an engineer
11	Engineer & Society	CO3.To elucidate the rules and regulations of patent and trade laws
		CO4. To equip the students to have a basic awareness on environmental and socioeconomic
		factors
		CO1.To impart knowledge of corrosion prevention methods and water treatment
12	Industrial Chemistry	technologies
12	industrial Chemistry	CO2. To enable the students to obtain the knowledge on various types of electro chemical
		energy systems, polymers, fuels, lubricants and their applications in engineering.
		CO1.To impart the basic concepts of force systems, free body diagram and equilibrium
		conditions
		CO2. To familiarize on calculating the geometric properties like centroid, moment of
		inertia of various sectional areas and masses and introduce the concept of friction and
13	Engineering Mechanics	virtual work.
		CO3.To develop the knowledge on basic principles of kinematics and kinetics with simple
		applications
		CO4. To introduce applications on using work-energy principle and Impulsemomentum
		methods.
		CO1. To impart knowledge and skills required to draw projections of solids in different
14	Computer Aided Engineering	contexts
	Drawing	CO2.To impart the skills required for drafting using drafting package
15	Engineering Workshop	CO1.To impart hands-on training on basic engineering trades
15		1001.10 impart nands-on training on basic engineering trades
		CO1 Professional Communication (Lab) is a career oriented programme. It seeks to

CO2.To introduce the laws of thermodynamics and their applications to various

21	Solid Mechanics	CO1.To impart the knowledge on internal behaviour of mechanical elements under the action of applied loads
22	Engineering Metallurgy	CO1.To familiarize with the fundamentals of crystallography, metallurgy, heat treatment and metal properties.
		CO1.Information to supplement the Electrical & Electronics Engineering course
23	Electrical and Electronics Engineering Lab	CO2.To conduct tests on various electrical & electronic circuits and to familiarize
		experimental procedures of those Circuits.
24	Solid Mechanics and Metallurgy	CO1.To impart hands on training to examine the mechanical properties of materials
		CO1.To impart hands on training for part modeling and assembly using Modeling Package.
25	Computer Aided Modeling Lab	CO1.To impart hands on training for part modeling and assembly using Modeling Package.
		CO1.To introduce the principles of manufacturing processes to convert materials into
26	Manufacturing Processes	desired shapes and sizes.
	-	CO1.To introduce the principles of operation of heat engines and compressors along with
07		the performance characteristics
27	Applied Thermodynamics	CO2. To familiarize with various thermodynamic cycles of Refrigeration and psychrometric
		processes
28	Dynamics of Machines	CO1.To familiarize with the dynamic force analysis of machines and their effect.
		CO1.To familiarize the fluid properties, basic laws and principles used to describe
29	Fluid Mechanics	equilibrium and motions of fluids.
2)		CO2.To introduce the principles of conservation of mass, momentum and energy and their
		application in study of fluid flow.
		CO1.To introduce the principles of conservation of mass, momentum and energy and their
20		application in study of fluid flow.
30	Elements of Civil Engineering	CO2. To introduce basics of Civil Engineering concepts in the fields of surveying, building
		materials, water resources, Water Supply, Sanitary ,Electrical Works in Building and Highway engineering.
		CO1.To impart knowledge on water supply, treatments and water distribution for all type
		of buildings
	Building Services	CO2.To acquire principles and best practices for Solid waste management in residential
31		units.
		CO3.To create awareness about the importance of electrical and mechanical services in
		buildings and fire safety
		CO1.To introduce the concepts of dielectric and ferro magnetic materials.
32	Electrical Materials	CO2.To impart knowledge on semiconductor materials
	ļ	CO3.To familiarize with the required materials used for electrical applications.
		CO1.To introduce the basic concepts of control systems by developing mathematical
22	Control Systems Engineering	models for physical systems.
33	Control Systems Engineering	CO2.To familiarize with the time domain behavior of linear control systems. CO3.To impart knowledge on analytical and graphical methods to quantify stability of
		linear control systems.
	Elements of Manufacturing	CO1.To introduce the principles of manufacturing processes to convert materials into
34	Processes	desired shapes and sizes
	Automotive Engineering	CO1.To introduce various components of an automobile and engine sub systems.
		CO2. To familiarize with the various systems such as transmission system, steering system,
35		suspension system, braking system, and safety systems.
		CO3.To impart knowledge on various safety systems of an automobile and emission norms.
	Introduction to Microprocessors and Microcontrollers	CO1.To familiarize with architecture of 8086 microprocessor and 8051 microcontroller.
36		CO2.To introduce the assembly language programming concepts of 8086 processor.
		CO3.To expose with various interfacing devices with 8086 using 8255.
		CO1.To introduce various analog and digital modulation and demodulation techniques
37	Fundamentals of Communications	CO2. To familiarize with various multiplexing schemes and Data communication protocols
		CO3.To impart the standards and mechanisms of television systems
	Computer Graphics	CO1.To introduce computer graphics applications and functionalities of various graphic
38		systems.
		CO2.To familiarize with 2D and 3D geometrical transformations CO3. To disseminate knowledge on the visible surface detection and animation.
	Object Oriented Programming	CO1. To familiarize with the concepts of object oriented programming.
30	10 Sjoor Onomed i rogramming	s s re raininarize with the concepts of object oriented programming.

	through JAVA	CO2. To impart the knowledge of AWT components in creation of GUI.
40	Systems Software	CO1. To familiarize with the implementation details of assemblers, loaders, linkers, and
-0	Systems Software	macro processors.
		CO1. To develop real time web applications
41	Web Programming	CO2. To get acquainted with skills for creating websites and web applications by learning
		various technologies like HTML, CSS, JavaScript, XML, JSP and JDBC
		CO1.To give a simple account of classicalnumber theory, prepare students towards the
	Mathematical Cryptography	concepts of Network Security and to demonstrate applications of number theory (such as
		public-key cryptography).
42		CO2. To students will have a working knowledge of the fundamental definitions and
		theorems of elementary number theory, be able to work with congruences.
		CO3. To solve congruence equations and systems of equations with one and more
		variables.
		CO4. To students will also have an exposure to cryptography.
		CO1.To know the physics and applications of semi conductor.
43	Semiconductor Physics	CO2. To understand fundamental principles and applications of the electronic and
		optoelectronic.
44	Thermal Engineering Lab	CO1. To study experimentally the performance of IC engines, compressors, refrigeration
		and air conditioning systems.
		CO1. To introduce the basic concepts of control systems by developing mathematical
		models for physical systems.
46	Control Systems	CO2. To familiarize with the time domain behavior of linear control systems.
		CO3.To impart knowledge on analytical and graphical methods to quantify stability of
		linear control systems.
		CO4.To introduce concepts on the state variable theory.
47	Nano Technology	CO1.To familiarize with principles of quantum mechanics on which nano materials beha
• /	Tuno Teennology	CO2. To elucidate applications of nanotechnology
48	Digital Logic Design	CO1.To familiarize with the concepts of designing digital circuits.
	Numerical and Statistical Methods	CO1.To understand the various numerical techniques.
50		CO2.To introduce the concepts of probability and statistics.
50		CO3.To know the importance of the correlation coefficient & lines of regression
		CO4.To know sampling theory and principles of hypothesis testing.
		CO1.To expose the students to the mechanics of metal cutting, so as to equip
51	Metal Cutting and Machine Tools	them with adequate knowledge about elements of metal cutting process.
51		CO2. To emphasize upon the prominent theories, concepts and constructional features of
		machine tools related to turning, shaping, planning, drilling, milling and grinding
52	Turbo Mchinery	CO1.To introduce the principles of hydraulic turbines and pumps, steam turbines and
52	Turbo Mennery	compressors along with their performance characteristics.
53	Non-Conventional Sources of	CO1.To study various types of non-conventional sources of energy and techniques used in
	Energy	exploiting solar, wind, tidal and geothermal sources of energy and bio-fuels.
54	Mechanical Vibrations	CO1. To familiarize with the concepts of mathematical model and solution methods for
54		vibrations of the mechanical systems.
55	Mechanics of Composite	CO1. To familiarize with the composite materials and their mechanical behaviour
	· · · · · · · · · · · · · · · · · · ·	1 1
55 56	Mechanics of Composite Data Structures	CO1. To impart knowledge of linear and non-linear data structures.
	· · · · · · · · · · · · · · · · · · ·	CO1. To impart knowledge of linear and non-linear data structures. CO2. To familiarize with different sorting and searching techniques.
	· · · · · · · · · · · · · · · · · · ·	CO1. To impart knowledge of linear and non-linear data structures. CO2. To familiarize with different sorting and searching techniques. CO1. To introduce the basic concepts and principles of remote sensing.
56	Data Structures	CO1. To impart knowledge of linear and non-linear data structures. CO2. To familiarize with different sorting and searching techniques.
56	Data Structures	 CO1. To impart knowledge of linear and non-linear data structures. CO2. To familiarize with different sorting and searching techniques. CO1. To introduce the basic concepts and principles of remote sensing. CO2. To familiarize with structure and function of Geographic Information Systems. CO3. To illustrate the multidisciplinary nature of Geospatial applications.
56 57	Data Structures Geoinformatics	 CO1. To impart knowledge of linear and non-linear data structures. CO2. To familiarize with different sorting and searching techniques. CO1. To introduce the basic concepts and principles of remote sensing. CO2. To familiarize with structure and function of Geographic Information Systems.
56	Data Structures	 CO1. To impart knowledge of linear and non-linear data structures. CO2. To familiarize with different sorting and searching techniques. CO1. To introduce the basic concepts and principles of remote sensing. CO2. To familiarize with structure and function of Geographic Information Systems. CO3. To illustrate the multidisciplinary nature of Geospatial applications. CO1. To communicate the importance of institutional sanitation in maintaining public health.
56 57	Data Structures Geoinformatics	 CO1. To impart knowledge of linear and non-linear data structures. CO2. To familiarize with different sorting and searching techniques. CO1. To introduce the basic concepts and principles of remote sensing. CO2. To familiarize with structure and function of Geographic Information Systems. CO3. To illustrate the multidisciplinary nature of Geospatial applications. CO1. To communicate the importance of institutional sanitation in maintaining public health. CO2. To introduce the strategies for maintaining healthy living and working environment
56 57	Data Structures Geoinformatics Environmental Sanitation	 CO1. To impart knowledge of linear and non-linear data structures. CO2. To familiarize with different sorting and searching techniques. CO1. To introduce the basic concepts and principles of remote sensing. CO2. To familiarize with structure and function of Geographic Information Systems. CO3. To illustrate the multidisciplinary nature of Geospatial applications. CO1. To communicate the importance of institutional sanitation in maintaining public health. CO2. To introduce the strategies for maintaining healthy living and working environment CO3. To delineate the role of environmental engineer in industrial environments.
56 57 58	Data Structures Geoinformatics Environmental Sanitation Modeling and Simulation of	 CO1. To impart knowledge of linear and non-linear data structures. CO2. To familiarize with different sorting and searching techniques. CO1. To introduce the basic concepts and principles of remote sensing. CO2. To familiarize with structure and function of Geographic Information Systems. CO3. To illustrate the multidisciplinary nature of Geospatial applications. CO1. To communicate the importance of institutional sanitation in maintaining public health. CO2. To introduce the strategies for maintaining healthy living and working environment CO3. To delineate the role of environmental engineer in industrial environments. CO1. To familiarize with programming skills using basic MATLAB and its associated
56 57	Data Structures Geoinformatics Environmental Sanitation	 CO1. To impart knowledge of linear and non-linear data structures. CO2. To familiarize with different sorting and searching techniques. CO1. To introduce the basic concepts and principles of remote sensing. CO2. To familiarize with structure and function of Geographic Information Systems. CO3. To illustrate the multidisciplinary nature of Geospatial applications. CO1. To communicate the importance of institutional sanitation in maintaining public health. CO2. To introduce the strategies for maintaining healthy living and working environment CO3. To delineate the role of environmental engineer in industrial environments. CO1. To familiarize with programming skills using basic MATLAB and its associated tool boxes.
56 57 58	Data Structures Geoinformatics Environmental Sanitation Modeling and Simulation of	 CO1. To impart knowledge of linear and non-linear data structures. CO2. To familiarize with different sorting and searching techniques. CO1. To introduce the basic concepts and principles of remote sensing. CO2. To familiarize with structure and function of Geographic Information Systems. CO3. To illustrate the multidisciplinary nature of Geospatial applications. CO1. To communicate the importance of institutional sanitation in maintaining public health. CO2. To introduce the strategies for maintaining healthy living and working environment CO3. To delineate the role of environmental engineer in industrial environments. CO1. To familiarize with programming skills using basic MATLAB and its associated tool boxes. CO2. To impart knowledge on building SIMULINK and Graphical user interface.
56 57 58	Data Structures Geoinformatics Environmental Sanitation Modeling and Simulation of	 CO1. To impart knowledge of linear and non-linear data structures. CO2. To familiarize with different sorting and searching techniques. CO1. To introduce the basic concepts and principles of remote sensing. CO2. To familiarize with structure and function of Geographic Information Systems. CO3. To illustrate the multidisciplinary nature of Geospatial applications. CO1. To communicate the importance of institutional sanitation in maintaining public health. CO2. To introduce the strategies for maintaining healthy living and working environment CO3. To delineate the role of environmental engineer in industrial environments. CO1. To familiarize with programming skills using basic MATLAB and its associated tool boxes.

61	Elements of Mechanical	CO1. To familiarize with the principles of mechanical power transmission elements
62	Material Handling Equipment	CO1. To provide knowledge on materials handling equipment
62		CO1. To familiarize with the electronic systems inside an automotive vehicle.
63	Automotive Electronics	CO2. To introduce the concepts of advanced safety systems
		CO1. To introduce lithography principles, mechanical sensors and actuators.
64	ntroduction to MEMS	CO2. To familiarize with the concepts of corona, insulators and sag in overhead lines
04		CO3. To present formally micro fluidic systems and chemical and bio medical micro
		systems.
		CO1. To familiarize with statistical methods to analyze data using classification,
65	Data Science	graphical and computational methods
05		CO2. To introduce Data Wrangling approaches and descriptive analytics on large data
		sets.
		CO1. To introduce key elements of virtual Reality with the components in VR systems.
66	Virtual and Augmented Reality	CO2. To gain knowledge of various input and output devices required for interacting in
		virtual world and augmented reality
67	Open Source Software	CO1. To impart the opportunities for open source software in the global market.
07	open source sontware	CO2. To familiarize with different steps in implementing the open source.
68	Cyber Laws	CO1. To expose the need of cyber laws to prosecute cybercrimes in the society
00		CO2. To familiarize with Licensing Issues Authorities for Digital Signatures.
		CO1. To equip students with basic practical skills with sufficient theory.
69	Quality, Reliability and	CO2. To understand the principles involved in the application area.
07	Operations Research	CO3. To develop the power of systematic thinking and reasoning, practical approach and
		exposition in the students.
70	Fluid Mechanics and Turbo	CO1. Determine experimentally the co-efficient of discharge of various flow measuring
70	Machinery Lab	devices and study the performance of various turbo machines.
71	Machine Tools Lab	CO1. To impart hands on training in the operation of basic machine tools.
72	Computer Aided Machine	CO1. To impart hands on training for drafting ,modeling and assembly of machine parts
12	Drawing Lab	using modeling package
		CO1. To introduce computer graphics applications and functionalities of various graphic
73	Computer Graphics	systems.
15		CO2. To familiarize with 2D and 3D geometrical transformations.
		CO3. To disseminate knowledge on the visible surface detection and animation
74	Fuzzy Logic Systems	CO1. To impart knowledge on fundamentals of fuzzy sets and defuzzification
,.		CO2. To familiarize with the Fuzzy Logic systems.
		CO1. To familiarize with the architecture of 8086 microprocessor
75	Micro Processors and Interfacing	CO2. To introduce the assembly language programming concepts of 8086 processor.
		CO3. To impart knowledge on I/O interfacing.
77	Engineering Economics and	CO1. To familiarize with the concepts of managerial economics and accountancy
,,	Accountancy	principles.
		CO1.To impart the principles of measurement of dimensional and geometric parameters of
78	Metrology and Instrumentation	mechanical elements.
,0	interiorogy and more uncertained	CO2.To introduce working of various temparature, pressure, flow and strain measuring
		instruments.
79	Design of Machine Members	CO1. To impart the knowledge of the basic engineering design against static and
,,		fluctuating loads by considering strength and rigidity.
80	Heat Transfer	CO1. To introduce various modes of heat transfer and their significance in the design of
00		various heat transfer equipment.
81	Principles of Finite Element	CO1. To familiarize with the basic concepts of finite element method and its application
01	Method	to structural and heat transfer problems.
82	Robotics	CO1. To familiarize with anatomy, kinematics, sensors and dynamics of a programmable
02		machine, robot.
		CO1. To impart knowledge on IC engines, engine systems and combustion phenomenon.
83	Automobile Engineering	CO2. To familiarize with the various automotive systems such as transmission system,
		steering system, suspension system, braking system, safety systems and hybrid vehicles.
		CO1. To familiarize the concepts of database systems and different issues involved in the
84	Database Management Systems	database design. CO2. To introduce how to write SQL for storage, retrieval and manipulation of data in a
	1	relational database.

		CO1. To impart the knowledge of essential components of the hydrologic cycle
		CO2. To familiarize with different methods of flood frequency analysis and flood routing
		CO3. To impart knowledge on groundwater movement and well hydraulics
85	Hydrology	CO4. To provide an overview and understanding of Unit Hydrograph theory and its
		analysis.
		CO5. To familiarize with the relationships between soil, water and plant and their
		significance in planning an irrigation system
	Planning for Sustainable	CO1. To familiarize the concept of sustainable development
86	Development	CO2. To introduce various components of sustainable development
		CO1. To introduce the concepts on working principles of electric drives used for different
		hybrid electric vehicles.
87	Electrical and Hybrid Vehicles	CO2. To familiarize with the different energy storage systems and their management
		strategies.
		CO1. To provide an overview of different methods of power generation with a particular
88	Power Plant Instrumentation	stress on thermal power generation
00		CO2. To impart knowledge on the different types of control loops.
		CO1. to understand the properties of engineering materials, so as to manipulate them for
89	Material Science	the desired engineering applications.
		CO1. To study various types of non-conventional sources of energy and techniques used
90	Renewable Energy Sources	in exploiting solar, wind, tidal and geothermal sources of energy and bio-fuels.
		CO1. To introduce different assistive technology devices
91	Assistive Technologies	CO2. To familiarize with the concepts of enhance speech communication and independent
91	Assistive reenhologies	living.
		CO1. To introduce the basics of biological concepts and relate it to engineering
02	Die Medical Engineering	CO2. To familiarize with physiology of cardio-vascular system, respiratory system & the
92	Bio-Medical Engineering	elements of Patient Care Monitoring.
		CO3. To impart the knowledge on the patient monitoring displays, diagnosis &
		techniques.
		CO1. To familiarize with defining own custom AngularJS directives that extend the
02		HTML language
93	Node and Angular JS	CO2. To introduce the concepts of client-side services that can interact with the Node.js
		web server
		CO3. To understand the best practices for server -side JavaScript
		CO1. To understand security concepts, Ethics in Network Security.
		CO2. To familiarize with new algorithms (mathematical formulas) and statistical
0.4		measures that assesses relationships among members of large data sets.
94	Cyber Security	CO3. To identify the vulnerability of the Internet systems and recognize the mechanisms
		of the attacks, and apply those to design and evaluate counter measure tools.
		CO4. To gain knowledge on security threats, and the security services and mechanisms to
		counter them.
95	Scripting Languages	CO1. To familiarize with JQuery, JSON, PERL, Ruby, AJAX to develop client-side and
		server-side web applications.
04	Software Droin at Manual i	CO1. To introduce plan and manage projects at each stage of the software development
96	Software Project Management	life cycle (SDLC).
		CO2. To impart effective software projects that support organization's strategic goals.
	Elements of Stochastic Processes	CO1. o study and understand the systems which evolve randomly over time, especially in
97		long run.
		CO2. To survey the important tools of stochastic processes.
		CO3. To model and solve engineering problems arising in real life situations.
	Academic Communication	CO1. To acquaint the students with the process and elements of academic writing.
00		CO2. To help them gain accuracy in the academic writing tasks they will be called upon to
98		perform as part of their graduate and postgraduate studies.
		CO3. To empower them to carry out academic writing tasks such as project report writing
		with success.
99	Heat Transfer Lab	CO1. To determine experimentally the conductive and radiating properties of materials
		and heat transfer coefficients in single and two phase flows.
100	Metrology and Instrumentation	CO1. To impart hands on training in measuring methods and metrology instruments.

101	Computer Aided Engineering	CO1. To impart hands on training for analysis of structural, vibration and fluid flow
	Analysis Lab	problems using analysis package.
102	Object Oriented Programming	CO1. To familiarize with the concepts of object oriented programming.
	Through JAVA	CO2. To impart the knowledge of AWT components in creation of GUI.
		CO1. To impart knowledge on design of complex engineering systems using sensors,
103	Mechatronics	actuators, controllers.
		CO2. To familiarize with the intelligent systems used in Mechatronics.
104	Embedded System Design	CO1. To introduce the concepts of embedded system design and to show how such systems
	, , ,	are developed using a concrete platform built around.
		CO1. To familiarize the significance of industrial engineering and its tools to enhance
106	Industrial Engineering and	productivity of the systems.
	Management	CO2. To introduce the principles and techniques for effective project management and
		personal management.
107	CAD / CAM	CO1. To present the role of computers in design and manufacture
		CO1. To familiarize with the concepts of evolutionary optimization
108	Optimization Techniques	CO2. To introduce the principles of soft computing optimization algorithes such as
		Genetic Algorithm, Particle Swarm Optimization, Differential Evolution and Ant Colony
		Optimization.
		CO1. To introduce the basic cycles of various refrigerating systems, their performance
109	Refrigeration and Air	evaluation along with details of system components and refrigerant properties.
	Conditioning	CO2. To impart knowledge of psychrometric properties, processes which are used in air-
		conditioning systems for comfort and industrial applications.
110	Unconventional Machining	CO1. To impart the principles of non-traditional machining methods.
111	Tribalagy	CO1. To familiarize with the selection of lubricating system for different machine
111	Tribology	components
112	Total Quality Management	CO1. To familiarize with the concepts of Total Quality Management.
		CO1. To equip students with the knowledge that is essential for application of
113	Computational Fluid Dynamics	computational fluid dynamics to solve engineering flow problems.
115	Computational Fluid Dynamics	CO2. To provide the essential numerical background for solving the partial differential
		equations governing the fluid flow.
114	Condition Monitoring	CO1. To familiarize with the importance of types of maintenance with their limitations and
		the methods of condition monitoring in different industrial sectors.
115	Design of Transmission Elements	CO1. To familiarize with the design of various machine elements for effective power
	-	transmission.
116	Disaster Management	CO1. To familiarize with disaster occurrence, strategies and remedial measures.
		CO1. To familiarize with durability aspects, quality of concrete causes of deterioration.
	Repair and Retrofitting Techniques	CO2. To impart the knowledge on inspection and assessment of distresse structures,
117		strengthen measures and demolition procedures.
		CO3. To familiarize with various concrete materials for repairs, and various precautions
		during retrofitting.
		CO1. To familiarize with the concepts of evolutionary optimization
118	Modern Optimization Techniques	CO2. To introduce the principles of soft computing optimization algorithes such as
		Genetic Algorithm, Particle Swarm Optimization, Differential Evolution and Ant Colony
		Optimization.
110	Electrical Damon Likilization	CO1. To familiarize with the mechanics of train movement.
119	Electrical Power Utilization	CO2. To impart knowledge on various heating methods and laws of illumination.
		CO3. To familiarize with the concepts of refrigeration and air-conditioning.
120	Green Engineering	CO1.To impart the knowledge needed to minimize impacts of products, processes on
	-	environment for sustainable development.
121	Non Destructive Evaluation	CO1. To familiarize with the concepts of various NDE techniques to identify the defect in a mechanical elements.
		CO1. To prototype the Smart objects and provides a holistic understanding of
		development Platforms, connected products of Internet of things (IoTs).
122	Cyber Physical Systems	CO2. To famialize with real World IoT Design Constraints, Industrial Automation and
		-
		Commercial Building Automation in IoT. CO1. To familiarize with the basic concepts of signals and systems.
123	Signals and Systems	CO2. To introduce various transform techniques on signals.
123		CO2. To introduce various transform techniques on signals. CO3. To develop an understanding of sampling and correlation techniques on signals.
		CO3. To develop an understanding of sampling and correlation techniques of signals.

104		CO1. To provide a comprehensive overview of digital forensic process.
124	Digital Forensics	CO2. To familiarize with the different roles a computer in crime investigation.
125	Business Intelligence and	CO1. To identify the process of decision making and use of model for decision making
125	Decision Support Systems	CO2. To use various visualization tools for delivery of knowledge.
126	Adhoc and Sensor Networks	CO1. To acquire fundamental concepts of ad hoc networks.
		CO2. To learn design considerations of wireless sensor networks.
107		CO1. To provide the foundation knowledge in information retrieval.
127	Information Retrieval Systems	CO2. To familiarize about different applications of information retrieval techniques in
128	Energy Lagis	the Internet or Web environment CO1. To impart the knowledge of fuzzy set theory and its applications in Engineering.
120	Fuzzy Logic	CO1. To provide hands on experience in MATLAB and to write simple codes to
		implement the numerical methods.
129	Simulation Lab	CO2. To demonstrate the simulation of manufacturing processes using simulation package.
122		CO3. To demonstrate the simulation of manufacturing processes using simulation package.
		and 3D printer.
		CO1. To introduce the architectural concepts of Hadoop and introducing map reduce
		paradigm.
130	Big Data Anlytics	CO2. To disseminate knowledge on how to summarize, query, and analyze data with Hive.
		CO3. To familiarize with business decisions and create competitive advantage with Big
		Data analytics.
101	Computer Organization and	
131	Architecture	CO1. To familiarize with organizational aspects of memory, processor and I/O.
132	Cryogenics	CO1. To study various fluid properties, applications, gas liquefaction systems, air
		separation techniques, Insulating materials, vacuum pumps used in cryogenics.
	Design for Manufacturing and	
134	Assembly	CO1. To familiarize with the design considerations for manufacturing and assembly.
		CO1 To interface the methics of an interpretation
136	Power Plant Engineering	CO1. To introduce the working of various power plants. CO2. To familiarize with estimation of unit power cost and factors affecting it.
	Theory of Elasticity	CO2. To familiarize with estimation of unit power cost and factors affecting it.
137	Theory of Elasticity	CO1. To familiarize with the basic concepts of theory of elasticity.
138	Rapid Prototyping	CO1. To familiarize with rapid prototype tools and techniques for design and
138		Manufacturing.
		CO1. To analyze and solve basic problems of Subsonic and Supersonic flows of
139	Gas Dynamics and Jet Propulsion	compressible fluids with Friction and Heat transfer.
		CO2. To estimate the thrust and specific impulse of a propeller engine from fluid and
140		thermodynamic principles.
140	Automation in Manufacturing	CO1. To introduce various stratagies of automation in manufacturing.
141	Non Destructive Techniques	CO1. To familiarize with the concepts of various NDE techniques to identify the defect in
	•	a mechanical elements.
C N-		ECE
S.No	Course Name	Course Outcomes CO1. Speak with a reasonable degree of fluency using communication strategies as well
		as conventions of politeness and courtesy.
		CO2. Listen to short audio and video clips in both standard Indian accent and native
		English accent and gain both understanding of messages and sensitivity to native- speaker
1	Functional English	accents.
	-	CO3. Read fluently comprehending texts of different kinds.
		CO4. Write coherent paragraphs and technical reports.
		CO5. Guard against mistakes Indians typically make in their speech and writing in
		English
		CO1. Use the concepts of Eigen values and eigenvectors in solving engineering
	Linear Algebra& Differential Equations	problems.
		CO2. Apply 1st & 2nd order differential equations to solve various engineering problems.CO3. Apply the techniques of partial differentiation to find maxima and minima of
		two/three variables.
		two, three variables.
		CO4. Solve first order linear & non-linear partial differential equations.

3 Engineer & Society CO1. Comprehend different moral perspectives and one's own Ethical CO2. Understand the concept of safety and risk. 3 Engineer & Society CO3. Explain different initiatives to protect nature. CO4. Identify the role of Information Technology. CO5. Understand different types of infringement of Intellectual Proper CO6. Analyze the importance of Entrepreneurship. CO1. Explain construction and working of laser. CO2. Relate the principles of propagation of light in optical fibers for communications. CO3. Identify conductivity mechanism in semiconductors . CO3. Identify conductivity mechanism in semiconductors . CO4. Determine types of polarization and classius-mossoti relation . CO5. Differentiate classical and quantum free electron theories Deriv contribution for magnetism	erty Rights.
3 Engineer & Society CO3. Explain different initiatives to protect nature. CO4. Identify the role of Information Technology. CO5. Understand different types of infringement of Intellectual Proper CO6. Analyze the importance of Entrepreneurship. 4 Solid State Physics CO1. Explain construction and working of laser. CO2. Relate the principles of propagation of light in optical fibers for communications. 4 Solid State Physics CO3. Identify conductivity mechanism in semiconductors . CO4. Determine types of polarization and classius-mossoti relation . CO5. Differentiate classical and quantum free electron theories Deriv

contribution for magnetism	ve orbital and spin
Conditionation for magnetism	
CO1. Outline problem solving steps, c-tokens and data types.	
CO2. Design algorithm and flowchart for solving problem.	
Problem Solving through CO3. Use control statements for writing the programs.	
5 Computer Programming CO4. Apply the concepts of arrays and strings in problem solving.	
COS. Use pointers and functions to develop C programs.	
CO6. Distinguish structures and unions and develop programs using str	ructures.
CO7. Demonstrate the operations on files.	
CO1. Give short impromptu speeches with confidence and fluency an	nd take part in
conversations in different functional contexts using English following a	appropriate
communication strategies.	
6 Functional English Lab CO2. Check the pronunciation of words in a dictionary using their know	owledge of
phonemic symbols.	
CO3. Speak English with adequate attention to stress, rhythm, and into	
CO4. Speak without their pronunciation being marred by regional pec	
thereby greater intelligibility in their communication with non-Telugu s	speakers of English.
CO1. Identify energy gap of a semiconductor.	
CO2. Draw characteristic curves to estimate thermal coefficient of a the	
CO3. Observe self timer and tuning nature of passive components like	RC,LCR
7 Solid State Physics Lab CO4. Verify magnetic field along the axis of a circular coil.	
CO5. Determine frequency of AC and unknown tuning fork	
CO6. Calculate light gathering power of optical fiber CO7. Estimate wavelength of unknown source	
CO1. Identify discrete components of computers.	
CO2 Prepare applications using MS Office	
8 Computer Programming Lab CO2. The part applications using two office.	
CO4. Develop a C program for a given problem.	
CO1. Speak with a reasonable degree of fluency and accuracy in prof	fessional
communication situations (such as arriving at a consensus through discu	
presentation, and taking part in a telephone conversation)	č
CO2. Listen to short audio and video clips in native English accent (B	ritish and
American), and gain both understanding of messages and sensitivity to	native-speaker
9 Professional Communication accents	
CO3. Read fluently, comprehending texts of different kinds using mul	ltiple strategies and
higher-order skills	
CO4. Produce written discourses of different kinds;	
CO5. Guard against grammatical errors Indians typically make in their	r speech and writing
in English	
	rential equations
CO1. Apply Laplace transforms to find the solutions of ordinary diffe	· ·
Integral Transforms and Vector CO2. Express a function in Fourier series and in Fourier integral form	1.
Integral Transforms and Vector CO2 Express a function in Fourier series and in Fourier integral form	1.

11	Applied chemistry	 CO1. Explain the working of lead acid battery, nickel – cadmium battery, lithium ion battery and fuel cells and to explain the applications of sensors and biosensors. CO2. Explain about new generation photo voltaic cells. CO3. Apply a suitable method of water treatment depending on the quality requirement. CO4. Explain the methods of synthesis of liquid crystals, nano materials properties and applications of CNTs and quantum dots. CO5. Explain properties and engineering applications of fibre reinforced plastics, conducting polymers and bio degradable polymers. CO6. Explain the principles and working of spectrophotometer and flame photometer for the determination of a given ion in a given solution.
12	Environmental Studies	 CO1. Understand the role of a citizen in protection of environment. CO2. Analyze functional attributes of an ecosystem. CO3. Enumerate the values of biodiversity. CO4. Identify appropriate processes to control pollution CO5. Identify waste management practices CO6. Understand various stages of Environmental Impact Assessment (EIA)
13	Linear Electrical Networks	 CO1. Apply various circuit laws to analyze the electrical circuits. CO2. Analyze the steady state behavior of DC and AC circuits. CO3. Apply network theorems to analyze the electrical circuits. CO4. Analyze the behavior of electrical resonance • evaluate different two port network parameters.
14	Numerical Methods& complex Analysis	 CO1. Apply numerical techniques for solutions of Algebraic, transcendental and ordinary differential equations. CO2. Compute interpolating polynomial for the given data. CO3. Find derivatives and integrals by using numerical techniques. CO4. Test the differentiability(analyticity) of a complex function CO5. Find the complex integration with the use of Cauchy's integral formula. CO6. Apply the concepts of conformal and bilinear transformations of standard functions.
15	Engineering Drawing	 CO1. Apply principles of drawing in representing dimensions of an object. CO2. Construct polygons and conical curves. CO3. Draw projections of points, lines and planes. CO4. Draw projections of solids in different positions. CO5. Convert orthographic views into isometric views and vice-versa.
16	Professional Communication Lab	 CO1. Enhance the effectiveness of their communication through body language CO2. Take part in interactional communication (i.e. communication that serves the purpose of social interaction or small talk) with fluency CO3. Take part in transactional communication (i.e. communication that serves the purpose of carrying out functions such as giving directions, complaining, and apologizing) with fluency CO4. Speak professionally in telephone conversations; CO5. Make effective presentations using a range of strategies, including a good organization of the content, impressive opening and closing, the use of suitable visual aids, the use of stories/anecdotes to illustrate a point, effective use of body language, and good handling of the question-and-answer session; CO6. Take part in group discussions and debates successfully; CO7. Answer questions at an elementary level in job interviews; and CO8. Use team-building skills with impact in different situations.
17	Applied Chemistry Lab	 CO1. Test the quality parameters of water by volumetric and instrumental methods. • to operate the sensors for testing the water quality. CO2. Synthesize phenol – formaldehyde resin (Bakelite) CO3. Operate spectrophotometer and determine the concentration of Ferric Iron in a given solution. Familiar with word processing spread sheet and presentation applications. CO4. Get awareness on internet and World Wide Web. CO5. Understand protection of personal computer from different threats.

		CO1. Determine and understand probability, statistics of random variables and their
		functions.
		CO2. Decide statistics of random vectors and their functions.
	Probability Theory and Stochastic	CO3. Calculate statistics of random sequences, random processes, and their input and
18	Processes	output relationships and statistics in linear systems.
	Flocesses	CO4. Apply the concepts of probability, random variables
		CO5. Processes to analyze statistical problems in Electronics and communication
		Engineering field.
		CO6. Apply the concepts of filtering and prediction of a random process
		CO1. Analyze the carrier transport in junctions.
		CO2. Analyze the behavior of electronic devices.
		CO3. Study the models for diodes and use them for various applications.
19	Electronic Devices	CO4. Design power supply using junction diode and Zener voltage regulator.
		CO5. Characterize the current flow in BJTs and MOSFETs.
		CO6. Bias the BJTs and MOSFETs for amplifier applications.
		CO7. Analyze the behavior of BJTs and MOSFETs under small-signal conditions.
		CO1. Classify the signals and various operations on signals.
		CO2. Perform Fourier analysis on the signals
		CO3. Analyze the various systems.
20	Signals & Systems	CO4. Perform correlation operational on signals.
		CO5. Apply the various sampling techniques on continuous time signals.
		CO6. Analyze the various continuous time signals through transformation (Fourier and
		Laplace) techniques.
		CO1. Apply economic concepts in business decision making.
		CO2. Identify the influencing factors of Demand for a given product.
	Engineering Economics and	CO3. Establish the suitable business organization with available resources.
21	Project Management	CO4. Analyze BEP for a project and adopt appropriate pricing strategies.
		CO5. Understand the importance of project management.
		CO6. Apply network concepts in business decision making.
		CO1. Apply the concepts of electric fields and magnetic fields in different applications.
		CO2. Analyze the electric and magnetic fields for different charge distributions.
22		CO3. Derive the wave equations in perfect dielectric and conducting media.
22	Electromagnetic Field Theory	CO4. Calculate the energy stored in electric and magnetic fields.
		CO5. Understand reflection and refraction of electromagnetic waves in different media.
		CO6. Determine the power flow in electromagnetic waves.
		CO1. Describe the performance of DC, three phase, single-phase AC machines and
		measuring instruments.
~~	Elements of Electrical	CO2. Determine the EMF equation of DC and AC machines
23	Engineering	CO3. Realize magnetization and load characteristics of DC machines.
	6 6	CO4. Determine the characteristics of three phase and single phase induction motor.
		CO5. Find the losses and efficiency of AC and DC machines
		CO1. Identify various electronic components and basic electronic measuring instruments
		and other lab equipment.
	Electronic Devices Lab	CO2. Perform experiment, take observations, present the results in proper form, analyze
		and interpret results, draw conclusions by correlating with theory.
~		CO3. Use modern tools for simulation.
24		CO4. Verify the I-V characteristics of junction diode, Zener diode, LED, photodiode,
		MOSFET, BJT, and obtain their parameters.
		CO5. Design, simulate, hardware implement, and test - DC power supply, Zener voltage
		regulator, diode clipper, clamper, and BJT and MOSFET voltagedivider bias circuits.
		CO6. Verify the switching action of transistor.
		CO7. Make oral presentations and prepare written reports.

		CO1. Verify the applicability of network theorems to practical electrical circuits.
	Networks & Electrical	CO2. Specify and test RLC series and parallel resonant circuits.CO3. Interpret /correlate physical observations and measurements involving electrical
25	Technology Lab	circuits to theoretical principles
		CO4. Predict the efficiency of DC Shunt motor by conducting No-Load Test and able to
		draw performance curves by conducting brake test.
		CO1. Apply the knowledge of network theory in analyzing the concepts of transmissions
		lines.
		CO2. Analyze the transmission lines at different frequencies.
26	Transmission Lines and	CO3. Measure the transmission line parameters using smith chart.
	Waveguides	CO4. Demonstrate the knowledge of wave guides and fundamental principles.
		CO5. Understand different modes of propagation in wave guides.
		CO6. Select an appropriate wave guide to meet specified requirements.
		CO1. Draw, analyses, and characterize the MOS and BJT single-stage amplifiers at low
		and high frequencies.
		CO2. Design CS and CE amplifiers at low frequencies.
27	Analog Circuits	CO3. Draw, analyze, and characterize - cascode, darlington, differential, feedback, power
		amplifiers and oscillators.
		CO4. Draw and analyze the behaviour of tuned amplifiers and op amp under inverting
		and non-inverting configurations
		CO1. Disseminate the fundamentals of analog modulation schemes.
		CO2. Differentiate DSB-SC and SSB modulation schemes.
28	Analog Communications	CO3. Understand the functioning of AM and FM transmitters and receivers.
20		CO4. Determine power relations for various modulation schemes and evaluate the impact
		of noise in AM and FM modulation schemes. Compare and contrast TDM and FDM
		techniques.
		CO1. Design various logic circuits using Boolean laws.
29	Digital Circuit Design	CO2. Design combinational and sequential logic circuits.
		CO3. Gain the knowledge of PLDs.
		CO4. Develop digital circuits using HDL
		CO1. Demonstrate the working process of sorting (bubble, insertion, selection and heap)
		and searching (linear and binary) methods using a programming language. CO2. Design algorithms to create, search, insert, delete and traversal operations on linear
30	Fundamentals of data Structures	and non-linear data structures.
		CO3. Evaluate the arithmetic expressions using stacks.
		CO3. Evaluate the arithmetic expressions using stacks. CO4. Compare array and linked list representation of data structures.
		CO1. Design, simulation, and conduct of experiments to obtain the frequency response/
		performance characteristics of single-stage, cascode, differential, tuned, feedback, and
31	Analog Circuits Lab	power amplifiers, RC and LC oscillators,.
		CO2. Testing of op-amp in inverting and non-inverting configurations.
		CO1. learn the digital circuit concepts.
32	Digital Circuit Design Lab	CO2. Design the digital circuits.
	Digital Circuit Design Lab	CO3. Develop digital circuits using CAD tools.
		CO1. Infer the DC and AC characteristics of operational amplifiers and its effect on
		output and their compensation techniques.
	Linear Integrated Circuits	CO2. Elucidate and design linear and non-linear applications using op-amps.
22		CO3. Design and analyze comparators, waveform generators and multivibrators using
33	Applications	functional ICs.
		CO4. Design active filters and regulated power supplies for various applications.
		CO5. Apply the concepts of VCO and PLL in the design of demodulator circuits.
_		CO6. Choose appropriate A/D and D/A converters for signal processing applications.
		CO1. Understand basic concepts of digital communication systems.
		CO2. Distinguish PCM and DM systems.
34	Digital Communications	CO3. Elucidate different digital modulation techniques.
		CO4. Determine the probability error for different digital modulation techniques.
		CO5. Identify error detection & correction capabilities of linear block codes.

		CO1. Understand the fundamental concepts of Antennas.
		CO2. Differentiate antennas based on their radiation mechanism.
35	Antennas and Wave Propagation	CO3. Design basic antenna arrays using multiplication of patterns.
		CO4. Analyze the performance of non resonant radiators, VHF and UHF antennas.
		CO5. Compare the performance of several antennas working at high frequencies.
		CO6. Distinguish wave propagations based on frequency of operation.
		CO1. Characterize the MOS devices
36	Principles of VLSI Design	CO2. Draw layouts
		CO3. Apply design techniques for VLSI circuits
		CO4. Apply testing and verification principles for VLSI circuits
		CO1. Understand various methodologies for the design of VLSI systems.
27	Professional Elective – I: CAD	CO2. Optimize combinational circuits.
37	for VLSI	CO3. Develop algorithms for the layout optimization.
		CO4. Size floor plan and solve routing problems.
		CO5. Analyze different simulation and synthesis techniques.
		CO1. Learn the basic structure and operations performed by the components of a digital
		computer.
38	Computer Organization	CO2. Know the concepts of micro-programming, micro code sequencing and pipelining
		techniques.
		CO3. Differentiate the hierarchical memory system including cache, virtual memories and
		instruction level parallelism.
		CO1. Identify the topology and architecture of a computer network. CO2. Differentiate the OSI and TCP reference models.
	Computer and Communication	
39	Computer and Communication Networks	CO3. Apply protocols to different layers of a network hierarchy.CO4. Understand different datalink protocols.
	INCLWOIRS	CO5. Identify the routing algorithm for given user application.
		CO6. Understand the applications of computer networks.
		CO1. Know the concept of bio-medical engineering, evolution, age, development,
		advancements and applications.
		CO2. Get awareness on noval theory related to human body and various components.
		CO3. Analyze the operation of measuring the cardio-vascular system by knowing its inner
40	Biomedical Engineering	organization, sensor and transducer theory & plethysmographical concepts.
		CO4. Learn the principles of respiration and respiratory therapy equipment. Understand
		the fundamental principles & techniques of diagnosis and biotelemetry, monitors,
		recorders.
		CO1. Perform experiment, take observations, present the results in proper form, analyze
	Linear Integrated Circuits Applications Lab	and interpret results, draw conclusions by correlating with theory.
		CO2. Measure the parameters of IC 741 op-amp.
		CO3. Design, hardware implement, and test op-amp adder, integrator, Schmitt trigger,
		square and triangular wave generators, low-pass, high-pass, and bandpass active filters.
41		CO4. Design, hardware implement, and test monostable and astable mutivibrator circuits
		using 555 timer.
		CO5. Design, hardware implement, and test regulated power supply using 3-terminal /
		723 IC regulators.
		CO6. Verify the lock range and capture range of PLL IC 565, operation of weighted
		resistor / R-2R digital to analog converters, and analog to digital convertors. CO7. Make oral presentations and prepare written reports.
		CO1. Verify the sampling process with different sampling rates.
	Analog and Digital Communications Lab	CO2. Compare the operation of various analog and digital modulation schemes.
42		CO3. Distinguish Frequency Shift Keying and Differential Phase Shift Keying
		techniques.
		CO4. Test linear block encoders and decoders

r		
43	Digital Signal Processing	 CO1. Analyze and process signals in the discrete domain. CO2. Determine the Fourier series coefficients and z-transform of discrete time signals. CO3. Apply the various transform techniques on discrete time signals. CO4. Design digital filters (IIR and FIR) for a given specifications. CO5. Apply various windowing techniques in the design of FIR filter. CO6. Realize digital filters (IIR and FIR).
44	Control Systems	 CO1. Develop mathematical models for physical systems. CO2. Employ the time domain analysis to quantify the performance of linear control systems and specify suitable controllers. CO3. Quantify time and frequency domain specifications to determine stability margins. CO4. Apply state variable theory to determine the dynamic behavior of linear control systems.
45	Microprocessors, Microcontrollers and Applications**	 CO1. Recall and apply a basic concept of digital fundamentals to Microprocessor based personal computer system. CO2. Identify a detailed s/w & h/w structure of the microprocessor and microcontroller CO3. Illustrate how the different peripherals (8255) are interfaced with Microprocessor CO4. Interface various I/O devices to the 8051 microcontroller. CO5. Know the ARM philosophy
46	Microwave and Optical Communications	 CO1. Design the microwave bench setup with different wave guide components CO2. Distinguish microwave sources based on constructional, operational and performance aspects CO3. Demonstrate the use of microwave bench for calculating power, attenuation, frequency and VSWR. CO4. Understand the basic concepts of fiber optics. design a fiber optic communication network with suitable light sources for a given application. CO5. Design a fiber optic communication network with suitable optical detectors for a given application.
47	Professional Elective – II: Analog IC Design	 CO1. Apply the knowledge of Mathematics and semiconductor theory in analyzing and designing of analog integrated circuits CO2. Demonstrate the knowledge and understanding of various current mirrors and switched capacitor circuits CO3. Describe and determine the effect of feedback on the stability of amplifier circuits. Select an appropriate A/D and D/A converter to meet specified performance requirements.
48	Nano Electronics	 CO1. Explain various aspects of nano electronics. CO2. Explore the fabrication techniques used for nanodevices. CO3. Identify the importance of scaling. CO4. List of various applications of tunneling. CO5. Demonstrate the concepts of coulomb blockade and electron transport mechanisms.
49	Smart Antennas	 CO1. Apply different windowing techniques to obtain weights for desired antenna pattern. CO2. Make use of random variables for pre-processing of the signals. CO3. Differentiate the performance of general antenna and smart antenna for spatial processing of the signal. CO4. Conceptualize adaptive beamforming. CO5. Understand the concept of angle of arrival algorithms for beamforming. CO6. Test the received signal performance with different algorithms and can choose the suitable algorithm for the given application.

r	1	
		CO1. Develop mathematical models for practical communication channels and analyze
		information carrying capacity.
		CO2. Understand source coding mechanism.
50	Coding Theory	CO3. Analyze linear block codes and investigate the relationship between minimum
30	Coding Theory	distance and error correction/detection capabilities
		CO4. Analyze encoder and efficient decoder algorithms for convolutional codes.
		CO5. Design and implement channel encoder and decoder in hardware/ software to meet
		the required error performance in present day communication applications.
		CO1. Acquire the knowledge of assembly language programming using 8086
		microprocessor.
51	Microprocessor and	CO2. Perform various arithmetic and shift operations with 8086 based system.
	Microcontroller Interfacing Lab	CO3. Interface various I/O modules with 8086 based system.
		CO4. Implement various real time applications using 8051.
		CO1. Analyze and implement digital signal processing systems in time domain.
		CO2. Compute linear and circular convolution and the discrete Fourier transform (DFT)
		· · · · · · · · · · · · · · · · · · ·
52	Digital Signal Processing Lab	of discrete-time signals.
		CO3. Perform the frequency response of frequency-selective digital filters using
		Butterworth, chebyshev approximations and windows.
		CO4. Implement DSP operations on TMS320C6711 DSP processor.
		CO1. Design analog and digital circuits.
		CO2. Use EDA tools to perform simulation, draw schematic and layout, analysis, testing,
53	VLSI Lab	and interpret results.
		CO3. Write VHDL/Verilog code.
		CO4. Make oral presentations and prepare written reports.
		CO1. Characterize the behavior of CMOS inverter
54	CMOS Digital IC Design	CO2. Design various combinational and sequential circuits using CMOS logic
54	Civios Digital ic Design	CO3. Identify different components contributing to delay offered by interconnects
		CO4. Design complex digital circuits Design memory based array structures.
		CO1. Distinguish between the general computing system and the embedded system.
		CO2. Differentiate general purpose processors and single purpose processors.
55	Embedded System Design	CO3. Model different state machines and concurrent process.
		CO4. Specify different design technologies of software and hardware design.
		CO1. Classify the instruments based on static and dynamic characteristics.
56	Electronic Measurements and	CO2. Analyze the frequency component of a generated wave and its distortion
	Instrumentation	CO3. Learn the concepts of active and passive transducers.
		CO1. Analyze the switched capacitor circuits.
		CO2. Explore the fundamentals and different architectures of ADCs and DACs, mixed
57	Professional Elective - III : Mixed Signal IC Design	signal layout issues.
		CO3. Use PLLs for various applications.
		CO4. Characterize various digital IC building blocks.
		CO1. Understand the characteristics of radio environment.
	Cellular and Mobile Communications	
		CO2. Apply the concepts of frequency reuse and cell splitting to increase the capacity of
		cellular system.
58		CO3. Analyse different interferences in a cell to improve the performance of the system.
		CO4. Create a cellular system model for a given region considering terrain configuration.
		CO5. Design an efficient frequency management and channel assignment scheme by
		selecting proper handoff mechanism.
		CO6. Conceptualize GSM and multiple access schemes.
		CO1. Understand color Television standards and their specifications.
59	Digital TV Engineering	CO2. Conceptualize the operation of color Television system.
		CO3. Find the applications of Digital TV.
		CO1. Apply the concepts of Sampling, DFT and Filters.
60	DSP Processors and Architectures	CO2. Calculate DSP computational Errors.
60		CO3. Identify the Architectural features of DSP processors.
		CO4. Interface I/O and memory devices with DSP Processors.

	1	
		CO1. Understand architecture designs and their design issues, Core Libraries and EDA Tools required for SoC Design.
61	Professional Elective – IV:	CO2. Explore design methodology for Logic Cores, Soft and Hard Cores, Memory and
	System on Chip Design	Analog Cores. CO3. Perform SoC Design validation, prototyping and verification.
		CO4. Design SoCs for various applications.
		CO1. Explain the concepts, network architectures and applications of ad hoc and wireless sensor Networks
		CO2. Analyse the protocol design issues of ad hoc and sensor networks.
62	Wireless Sensor Networks	CO3. Design routing protocols for ad hoc and wireless sensor networks with respect to
		some protocol design issues.
		CO4. Evaluate the QoS related performance measurements of ad hoc and sensor networks
		CO1. Demonstrate the knowledge of orbital parameters and satellite launching
		techniques.
		CO2. Compare the role of various satellite subsystems. CO3. Design satellite link for required specifications.
63	Satellite Communication	CO4. Understand the coordination of earth stations for efficient utilization of the satellite
		by means of multiple accessing techniques.
		CO5. Develop a virtual satellite earth station.
		CO6. Navigate the receiving station by global positioning system.
		CO1. Analyze the need for image transforms, types and their properties.
		CO2. Process the images for the enhancement of certain properties or for optimized use of the resources.
64	Digital Image Processing	CO3. Explore causes for image degradation and to develop various restoration
		techniques.
		CO4. Evaluate the image compression techniques
		CO1. experiment with microwave sources like reflex klystron, Gunn diode and optical
65	Microwave and Optical Communications Lab	sources like LED's & Lasers.
65		CO2. conduct measurements using a standard microwave test bench, analog and digital optical links for microwave and optical signal characteristics.
		CO3. develop test bench for characterizing a given microwave component.
		CO1. Identify the requirements for low power
		CO2. Distinguish static and dynamic power dissipations
66	Professional Elective – V: Low	
	Power VLSI Circuits	CO4. Apply various methods to minimize switched capacitanceCO5. Identify suitable leakage power minimization technique
		CO6. Describe low power design methodologies such as adiabatic circuits.
		CO1. Apply the concepts of real time operating system.
67	Real Time Operating Systems	CO2. Develop software for embedded systems using the system design techniques.
	ficar rine operating bystems	CO3. Identify how to port RTOS on a microcontroller based development board.
		CO4. Model real-time applications using Unix/Linux and RTLinux programming.
	Speech Processing	CO1. Understand how speech is produced. CO2. Perform speech analysis and homomorphic processing of speech signals.
68		CO3. Code the speech signals using linear predictive analysis.
		CO4. Enhance the speech signals and recognize speech as well as speaker.
		CO1. Understand the concept of adaptive filters.
60	A leasting Circuit D	CO2. Apply Wiener and Kalman filters for signal processing applications.
69	Adaptive Signal Processing	CO3. Apply LMS and RLS algorithms for adaptive filter applications.CO4. Understand the concepts of linear and non-linear adaptive signal processing
		techniques
		CO1. Understand the different types of ASICs and its Design Flow.
70	Professional Elective – VI: ASIC Design	CO2. Analyze the Characteristics and Performance of Programmable ASICs, Logic cells,
		I/O Cells and Interconnects.
		CO3. Measure goals and objectives related to Floor planning, Placement and Routing.CO1. Distinguish C and Embedded C.
71	Embedded C	CO2. Select the processor, memory and operating system for an application.
		CO3. Design and develop an application using Embedded C.
	•	

72	RADAR Engineering	 CO1. Compute different parameters from radar data. CO2. Conceptualize the radar operation. CO3. Distinguish moving target and pulse Doppler radars. CO4. Understand the operation of different radar receivers. CO5. Track different objects by using radar in different noise conditions.
73	Multi Rate Signal Processing	 CO6. Realize radar systems for electronic warfare. CO1. Acquire the knowledge of multirate signal processing. CO2. Design perfect reconstruction and near perfect reconstruction filter bank system and to learn to assess the computational efficiency of multirate systems. CO3. Analyze the quantization effects in filter banks. CO4. Recognize the use of filter banks in applications such as speech processing and communication
74	Project	 CO1. Do the project keeping in view environmental safety, healthy design and develop socio & economical aspects. CO2. Interface peripherals to micro processors/micro controllers. CO3. Develop code for simulating the circuits and algorithms. CO4. Use modern tools for analyzing the circuits and algorithms. CO5. Test the developed circuits. CO6. Write reports & give oral presentations.
		CSE
S.No.	Course Name	Course Outcomes
1	Functional English	 CO1. listening to (and viewing) classroom lectures and other academic presentations with a reasonable degree of accuracy, understanding, and appreciation, and responding to them appropriately. CO2. Speaking in academic (e.g. classroom discussions) and social contexts with a fair degree of fluency, accuracy and intelligibility, and with due attention to factors such as purpose, audience, context, and culture. CO3. reading a wide range of informational and functional texts, including course books and reference materials, from print and non-print sources and using them for a variety of purposes. CO4. writing for academic purposes (e.g. assignments, examination answers)+C1410 in an organized way following the rules of discourse and using vocabulary and grammar appropriately and accurately; and CO5. To develop in them the communication strategies and social graces necessary for functioning effectively in social, academic, and other situations in which they may be called upon to use English. CO5. To develop in them the communication strategies and social graces necessary for functioning effectively in social, academic, and other situations in which they may be called upon to use English.
2	Linear Algebra & Integral transforms	CO1. To understand the concepts of eigenvalues and eigenvectorsCO2. To gain the knowledge of Laplace and inverse Laplace transformsCO3. To understand the concepts of Fourier Transforms
3	Chemistry	 CO1. To impart the knowledge in chemistry and applications of nano materials, liquid crystals and polymers used in engineering. CO2. To impart knowledge in chemistry of semiconductors, batteries and to impart the knowledge of green chemistry in green synthesis of products
4	Environmental Studies	CO1. To impart the basic knowledge about the environment and ecology.CO2. To develop an attitude of concern for biodiversity and its conservation.CO3. To assess the environmental impacts of developmental activities.CO4. To create awareness on environmental pollution and waste management.
5	Basic Electrical Engineering	CO1. To introduce the basics electrical circuits and network theorems. C02. To develop an understanding of DC machines and AC machines .
6	Problem Solving through Computer Programming	CO1. To emphasize the use of flowcharts and pseudo code in problem solving. CO2. To gain knowledge in C language. CO3. To apply C language in problem solving CO1. The communication strategies and social graces necessary in order to function effectively in social and other situations in which they may be called upon to speak in
7	Functional English Lab	English.

,	r uncuonai Englisii Lao	CO2. a greater awareness of English pronunciation and provides for focused practice with
		the sounds of English and intonation patterns improve their pronunciation skills and to
		enable them to speak with a reasonable degree of intelligibility.
		CO1. To familiarize with the discrete components of a computer, MS Office.
8	Computer Programming Lab	CO2. To develop C Programs to solve problems
		CO1. To equip the students with common employability skills (the skills required for
		gaining employment and performing successfully in different careers) which can enable
9	Professional Communication	them to perform communication tasks of increasing length and complexity.
9		
		CO2. To develop in them the interactional communication strategies and social graces
		which have the potential to add to the effectiveness of professional communication.
10	Numerical Methods and	CO1. To understand the various numerical techniques
10	Differential Equations	CO2. To aware of different techniques to solve first and second order differential
	1	equations.
		CO1. To learn conditions for propagation of laser light in guided medium.
11	Applied Physics	CO2. To understand principles of solid state materials for use in the engineering
		applications.
		CO1. To understand the Ethics and Human Values
		CO2. To equip the students to have a basic awareness on environmental and
12	Engineer & Society	socioeconomic factors.
		CO3. To familiarize with the rights and responsibilities of an engineer.
		CO4. To elucidate the rules and regulations of patents and trade laws.
		CO1. To familiarize the construction, characteristics and applications of various
13	Elements of Electronics	semiconductor devices.
	Engineering	CO2. To introduce various electronic circuits and their operation.
		CO1. To introduce Scripting Language.
14	Python Programming	CO2. To explore various problems solving approaches of computer science.
17		CO3. To develop a basic understanding of Python programming.
		CO1. Professional Communication (Lab) is a career-oriented programme. It seeks to
15	Professional Communication Lab	develop in the students the competence required to perform professional communication
		tasks of increasing length and complexity, which can help them secure employment and
		perform successfully in their careers.
		CO1. To draw the relevance between the theoretical knowledge and to imply it in a
16	Applied Physics Lab	practical manner with respect to analyze various electronic circuits and its components
		CO2. To understand the behaviour and characteristics of various active and passive
		components.
	Managerial Economics and	CO1. To familiarize with the importance of Managerial Economics and know its
17	Financial Analysis	significant role in achieving business objectives.
		CO2. To interpret and analyze the financial performance of a business unit.
		CO1. To familiarize the structure of statements (and arguments) involving predicates and
10		quantifiers.
18	Discrete Mathematical Structures	CO2. To introduce the applications of graph theory to various practical problems.
		CO3. To impart recurrence relations for solving a recursive problem.
		CO1. To impart knowledge of linear and non-linear data structures.
19	Data Structures	CO2. To familiarize with different sorting and searching techniques.
20	Digital Logic Design	CO1. To familiarize with the concepts of designing digital circuits.
20	Object Oriented Programming	CO1. To familiarize with the concepts of designing digital circuits.
21	through Java	CO2. To impart the knowledge of AWT components in creation of GUI.
22	Data Structures Lab	CO1. To implement different searching and sorting algorithms.
		CO2. To implement linear and non-linear data structures.
23	Object Oriented Programming	CO1. To demonstrate object oriented programming concepts.
	Lab	CO2. To introduce the creation of GUI using AWT components.
24	UNIX Programming Lab	CO1. To familiarize with various UNIX utilities.
		CO2. To impart knowledge on developing shell scripts.
		CO1. To impart the concepts of probability and statistics.
	Probability and Statistics	CO2. To disseminate the knowledge on sampling theory and principles of hypothesis
25		
25	Probability and Statistics	testing
25	Probability and Statistics	testing CO3. To introduce the correlation coefficient and lines of regression.
25 26	Probability and Statistics Operating Systems	

		CO1. To introduce the classification of machines by their power to recognize languages
27	Formal Languages and Automata	and to solve problems in computing.
	Theory	CO2. To familiarize how to employ deterministic and non-deterministic machines.
	Computer Organization and	
28	Architecture	CO1. To familiarize with organizational aspects of memory, processor and I/O.
		CO1. To familiarize with the concepts of database systems and different issues involved in
•		the database design.
29	Database Management Systems	CO2. To introduce SQL for storage, retrieval and manipulation of data in a relational
		database.
		CO1. To introduce basics of Civil Engineering concepts in the fields of surveying, buildin
30	Elements of Civil Engineering	materials, water resources, Water Supply, Sanitary Electrical Works in Building and
		Highway engineering.
		CO1. To impart knowledge on water supply, treatments and water distribution for all type
		of buildings.
21		CO2. To acquire principles and best practices for Solid waste management in residential
31	Building Services	units.
		CO3. To create awareness about the importance of electrical and mechanical services in
		buildings and fire safety
		CO1. To introduce the concepts of dielectric and ferro magnetic materials.
32	Electrical Materials	CO2. To impart knowledge on semiconductor materials.
		CO3. To familiarize with the required materials used for electrical applications.
		CO1. To introduce the basic concepts of control systems by developing mathematical
		models for physical systems.
33	Control Systems Engineering	CO2. To familiarize with the time domain behavior of linear control systems.
33	Control Systems Engineering	CO3. To impart knowledge on analytical and graphical methods to quantify stability of
		linear control systems.
		CO4. To introduce concepts on the state variable theory.
34	Elements of Manufacturing	CO1. To introduce the principles of manufacturing processes to convert materials into
34	Processes	desired shapes and sizes.
		CO1. To introduce various components of an automobile and engine sub systems.
		CO2. To familiarize with the various systems such as transmission system, steering system
35	Automotive Engineering	suspension system, braking system, and safety systems.
		CO3. To impart knowledge on various safety systems of an automobile and emissionnorm
	Introduction to Microprocessors	CO1. To familiarize with architecture of 8086 microprocessor and 8051 microcontroller.
36	-	CO2. To introduce the assembly language programming concepts of 8086 processor
36	Introduction to Microprocessors and Microcontrollers	CO2. To introduce the assembly language programming concepts of 8086 processor CO3. To expose with various interfacing devices with 8086 using 8255.
36	-	CO3. To expose with various interfacing devices with 8086 using 8255.
36 37	and Microcontrollers	CO3. To expose with various interfacing devices with 8086 using 8255. CO1. To introduce various analog and digital modulation and demodulation techniques.
	-	CO3. To expose with various interfacing devices with 8086 using 8255. CO1. To introduce various analog and digital modulation and demodulation techniques. protocols.
	and Microcontrollers	 CO3. To expose with various interfacing devices with 8086 using 8255. CO1. To introduce various analog and digital modulation and demodulation techniques. protocols. CO3. To impart the standards and mechanisms of television systems.
37	and Microcontrollers Fundamentals of Communications	 CO3. To expose with various interfacing devices with 8086 using 8255. CO1. To introduce various analog and digital modulation and demodulation techniques. protocols. CO3. To impart the standards and mechanisms of television systems. CO1. To introduce computer graphics applications and functionalities of various graphic
	and Microcontrollers	 CO3. To expose with various interfacing devices with 8086 using 8255. CO1. To introduce various analog and digital modulation and demodulation techniques. protocols. CO3. To impart the standards and mechanisms of television systems. CO1. To introduce computer graphics applications and functionalities of various graphic systems.
37	and Microcontrollers Fundamentals of Communications	 CO3. To expose with various interfacing devices with 8086 using 8255. CO1. To introduce various analog and digital modulation and demodulation techniques. protocols. CO3. To impart the standards and mechanisms of television systems. CO1. To introduce computer graphics applications and functionalities of various graphic systems. CO2. To familiarize with 2D and 3D geometrical transformations.
37 38	and Microcontrollers Fundamentals of Communications Computer Graphics	 CO3. To expose with various interfacing devices with 8086 using 8255. CO1. To introduce various analog and digital modulation and demodulation techniques. protocols. CO3. To impart the standards and mechanisms of television systems. CO1. To introduce computer graphics applications and functionalities of various graphic systems. CO2. To familiarize with 2D and 3D geometrical transformations. CO3. To disseminate knowledge on the visible surface detection and animation.
37	and Microcontrollers Fundamentals of Communications Computer Graphics Object Oriented Programming	 CO3. To expose with various interfacing devices with 8086 using 8255. CO1. To introduce various analog and digital modulation and demodulation techniques. protocols. CO3. To impart the standards and mechanisms of television systems. CO1. To introduce computer graphics applications and functionalities of various graphic systems. CO2. To familiarize with 2D and 3D geometrical transformations. CO3. To disseminate knowledge on the visible surface detection and animation. CO1. To familiarize with the concepts of object oriented programming.
37 38 39	and Microcontrollers Fundamentals of Communications Computer Graphics Object Oriented Programming through Java	 CO3. To expose with various interfacing devices with 8086 using 8255. CO1. To introduce various analog and digital modulation and demodulation techniques. protocols. CO3. To impart the standards and mechanisms of television systems. CO1. To introduce computer graphics applications and functionalities of various graphic systems. CO2. To familiarize with 2D and 3D geometrical transformations. CO3. To disseminate knowledge on the visible surface detection and animation. CO1. To familiarize with the concepts of object oriented programming. CO2. To impart the knowledge of AWT components in creation of GUI.
37 38	and Microcontrollers Fundamentals of Communications Computer Graphics Object Oriented Programming	 CO3. To expose with various interfacing devices with 8086 using 8255. CO1. To introduce various analog and digital modulation and demodulation techniques. protocols. CO3. To impart the standards and mechanisms of television systems. CO1. To introduce computer graphics applications and functionalities of various graphic systems. CO2. To familiarize with 2D and 3D geometrical transformations. CO3. To disseminate knowledge on the visible surface detection and animation. CO1. To familiarize with the concepts of object oriented programming.
37 38 39	and Microcontrollers Fundamentals of Communications Computer Graphics Object Oriented Programming through Java	 CO3. To expose with various interfacing devices with 8086 using 8255. CO1. To introduce various analog and digital modulation and demodulation techniques. protocols. CO3. To impart the standards and mechanisms of television systems. CO1. To introduce computer graphics applications and functionalities of various graphic systems. CO2. To familiarize with 2D and 3D geometrical transformations. CO3. To disseminate knowledge on the visible surface detection and animation. CO1. To familiarize with the concepts of object oriented programming. CO2. To impart the knowledge of AWT components in creation of GUI. CO1. To familiarize with the implementation details of assemblers, loaders, linkers, and macro processors.
37 38 39	and Microcontrollers Fundamentals of Communications Computer Graphics Object Oriented Programming through Java	 CO3. To expose with various interfacing devices with 8086 using 8255. CO1. To introduce various analog and digital modulation and demodulation techniques. protocols. CO3. To impart the standards and mechanisms of television systems. CO1. To introduce computer graphics applications and functionalities of various graphic systems. CO2. To familiarize with 2D and 3D geometrical transformations. CO3. To disseminate knowledge on the visible surface detection and animation. CO1. To familiarize with the concepts of object oriented programming. CO2. To familiarize with the implementation details of assemblers, loaders, linkers, and macro processors. CO1. To develop real time web applications.
37 38 39 40	and Microcontrollers Fundamentals of Communications Computer Graphics Object Oriented Programming through Java Systems Software	 CO3. To expose with various interfacing devices with 8086 using 8255. CO1. To introduce various analog and digital modulation and demodulation techniques. protocols. CO3. To impart the standards and mechanisms of television systems. CO1. To introduce computer graphics applications and functionalities of various graphic systems. CO2. To familiarize with 2D and 3D geometrical transformations. CO3. To familiarize with the concepts of object oriented programming. CO2. To familiarize with the concepts of object oriented programming. CO2. To familiarize with the implementation details of assemblers, loaders, linkers, and macro processors. CO1. To develop real time web applications. CO2. To get acquainted with skills for creating websites and web applications by learning
37 38 39 40	and Microcontrollers Fundamentals of Communications Computer Graphics Object Oriented Programming through Java Systems Software	 CO3. To expose with various interfacing devices with 8086 using 8255. CO1. To introduce various analog and digital modulation and demodulation techniques. protocols. CO3. To impart the standards and mechanisms of television systems. CO1. To introduce computer graphics applications and functionalities of various graphic systems. CO2. To familiarize with 2D and 3D geometrical transformations. CO3. To disseminate knowledge on the visible surface detection and animation. CO1. To familiarize with the concepts of object oriented programming. CO2. To familiarize with the implementation details of assemblers, loaders, linkers, and macro processors. CO1. To develop real time web applications. CO2. To get acquainted with skills for creating websites and web applications by learning various technologies like HTML, CSS, JavaScript, XML, JSP and JDBC.
37 38 39 40	and Microcontrollers Fundamentals of Communications Computer Graphics Object Oriented Programming through Java Systems Software	 CO3. To expose with various interfacing devices with 8086 using 8255. CO1. To introduce various analog and digital modulation and demodulation techniques. protocols. CO3. To impart the standards and mechanisms of television systems. CO1. To introduce computer graphics applications and functionalities of various graphic systems. CO2. To familiarize with 2D and 3D geometrical transformations. CO3. To disseminate knowledge on the visible surface detection and animation. CO1. To familiarize with the concepts of object oriented programming. CO2. To familiarize with the implementation details of assemblers, loaders, linkers, and macro processors. CO1. To develop real time web applications. CO2. To get acquainted with skills for creating websites and web applications by learning various technologies like HTML, CSS, JavaScript, XML, JSP and JDBC. CO1. To give a simple account of classicalnumber theory, prepare students towards the
37 38 39 40	and Microcontrollers Fundamentals of Communications Computer Graphics Object Oriented Programming through Java Systems Software	 CO3. To expose with various interfacing devices with 8086 using 8255. CO1. To introduce various analog and digital modulation and demodulation techniques. protocols. CO3. To impart the standards and mechanisms of television systems. CO1. To introduce computer graphics applications and functionalities of various graphic systems. CO2. To impart the standards and mechanisms of television systems. CO1. To introduce computer graphics applications and functionalities of various graphic systems. CO2. To familiarize with 2D and 3D geometrical transformations. CO3. To disseminate knowledge on the visible surface detection and animation. CO1. To familiarize with the concepts of object oriented programming. CO2. To familiarize with the implementation details of assemblers, loaders, linkers, and macro processors. CO1. To develop real time web applications. CO2. To get acquainted with skills for creating websites and web applications by learning various technologies like HTML, CSS, JavaScript, XML, JSP and JDBC. CO1. To give a simple account of classicalnumber theory, prepare students towards the concepts of Network Security and to demonstrate applications of number theory (such as public-key cryptography).
37 38 39 40	and Microcontrollers Fundamentals of Communications Computer Graphics Object Oriented Programming through Java Systems Software	 CO3. To expose with various interfacing devices with 8086 using 8255. CO1. To introduce various analog and digital modulation and demodulation techniques. protocols. CO3. To impart the standards and mechanisms of television systems. CO1. To introduce computer graphics applications and functionalities of various graphic systems. CO2. To familiarize with 2D and 3D geometrical transformations. CO3. To disseminate knowledge on the visible surface detection and animation. CO4. To familiarize with the concepts of object oriented programming. CO5. To familiarize with the implementation details of assemblers, loaders, linkers, and macro processors. CO4. To develop real time web applications. CO5. To get acquainted with skills for creating websites and web applications by learning various technologies like HTML, CSS, JavaScript, XML, JSP and JDBC. CO1. To give a simple account of classicalnumber theory, prepare students towards the concepts of Network Security and to demonstrate applications of number theory (such as public-key cryptography). CO2. To students will have a working knowledge of the fundamental definitions and
37 38 39 40 41	and Microcontrollers Fundamentals of Communications Computer Graphics Object Oriented Programming through Java Systems Software Web Programming	 CO3. To expose with various interfacing devices with 8086 using 8255. CO1. To introduce various analog and digital modulation and demodulation techniques. protocols. CO3. To impart the standards and mechanisms of television systems. CO1. To introduce computer graphics applications and functionalities of various graphic systems. CO2. To familiarize with 2D and 3D geometrical transformations. CO3. To disseminate knowledge on the visible surface detection and animation. CO1. To familiarize with the concepts of object oriented programming. CO2. To familiarize with the implementation details of assemblers, loaders, linkers, and macro processors. CO1. To develop real time web applications. CO2. To get acquainted with skills for creating websites and web applications by learning various technologies like HTML, CSS, JavaScript, XML, JSP and JDBC. CO1. To give a simple account of classicalnumber theory, prepare students towards the concepts of Network Security and to demonstrate applications of number theory (such as public-key cryptography).

		CO4. To students will also have an exposure to cryptography.
		CO1. To know the physics and applications of semi conductor.
43	Semiconductor Physics	CO2. To understand fundamental principles and applications of the electronic and
		optoelectronic.
44	Operating Systems Lab	CO1. To develop the concepts of process and memory management techniques.
44	Operating Systems Lab	CO2. To know the problems of deadlock and study the various handling mechanisms.
		CO1. To familiarize with creation of database and formulate SQL solutions to manipulate
45	Database Management Systems	the database.
45	Lab	CO2. To disseminate knowledge on integrity constraints, triggers and PL/SQL programs in
		a database environment.
	Eurine and all Incore of	CO1. To familiarize with various methodologies of EIA for project assessment.
46	Environmental Impact	CO2. To distinguish impact prediction, assessment based on significance and preparation
	Assessment	of audit report.
		CO1. To familiarize with the basic concepts of signals and systems.
47	Signals and Systems	CO2. To introduce various transform techniques on signals.
		CO3. To develop an understanding of sampling and correlation techniques on signals.
48	Fuzzy Logic	CO1. To impart the knowledge of fuzzy set theory and its applications in Engineering
50		CO1. To illustrate basic taxonomy and terminology of the software engineering.
50	Software Engineering	CO2. To plan and monitor the control aspects of project.
		CO1. To familiarize with lexical analyzer and different parsers.
51	Compiler Design	CO2. To introduce various storage allocation strategies, code generation and code
		optimization techniques.
		CO1. To introduce the fundamental concepts of computer networking.
52	Computer Networks	CO2. To familiarize with networking concepts to work on various Protocols of ISOOSI an
	1	ТСР/ІР.
		CO1. To familiarize with various technologies like HTML, CSS, JavaScript, XML,
53	Web Technologies	JSP and PHP to develop real-time web applications.
		CO1. To impart the concepts of control structures, classes, objects in .NET
5 4		CO2. To demonstrate the concept of exception handling and threads.
54	C#.NET	CO3. To impart the working style of forms in web applications
		CO4. To edify the connection to a database using web application.
<i></i>		CO1. To introduce dictionaries, priority queue and balanced trees.
55	Advanced Data Structures	CO2. To disseminate knowledge on Pattern Matching Algorithms and Tries.
		CO1. To familiarize with the fundamental concepts in software testing, including software
56	Software Testing Methodologies	testing objectives, process, criteria, strategies, and methods
		CO2. To disseminate knowledge on software testing techniques.
		CO1. To understand and describe syntax and semantics of programming languages.
		CO2. To understand data, data types, and basic statements.
57	Principles of Programming	CO3. To understand call-return architecture and ways of implementing them.
57	Languages	CO4. To understand object-orientation, concurrency, and event handling in programming
	6 6	languages.
		CO5. To develop programs in non-procedural programming paradigms.
		CO1. To introduce the basic concepts and principles of remote sensing.
58	Geoinformatics	CO2. To familiarize with structure and function of Geographic Information Systems.
		CO3. To illustrate the multidisciplinary nature of Geospatial applications.
		health.
59	Environmental Sanitation	
57		CO2. To introduce the strategies for maintaining healthy living and working environment.
		CO3. To delineate the role of environmental engineer in industrial environments.
()	Modeling and Simulation of	CO1. To familiarize with programming skills using basic MATLAB and its associated tool
60	Engineering Systems	boxes
		CO2. To impart knowledge on building SIMULINK and Graphical user interface
<i></i>		CO1. To introduce the working of power plants in power generation and layout of
61	Power Systems Engineering	substations
		CO2. To familiarize with the concepts of corona, insulators and sag in overhead lines.
62	Elements of Mechanical	CO1. To familiarize with the principles of mechanical power transmission elements.
63	Material Handling Equipment	CO1. To provide knowledge on materials handling equipment.
64	Automotive Electronics	CO1. To familiarize with the electronic systems inside an automotive vehicle.
04	Automotive Electronics	CO2. To introduce the concepts of advanced safety systems.

		CO1. To introduce lithography principles, mechanical sensors and actuators.
65	Introduction to MEMS	CO2. To make it known the thermal sensors and actuators, magnetic sensors and actuators.
05		CO3. To present formally micro fluidic systems and chemical and bio medical micro
		systems. CO1. To familiarize with statistical methods to analyze data using classification, graphical
		and computational methods.
66	Data Science	
		CO2. To introduce Data Wrangling approaches and descriptive analytics on large data sets.
		CO1. To introduce bata Wranging approaches and descriptive analytics on large data sets.
67	Virtual and Augmented Reality	CO2. To gain knowledge of various input and output devices required for interacting in
07	vintual and raginented reality	virtual world and augmented reality.
		CO1. To impart the opportunities for open source software in the global market.
68	Open Source Software	CO2. To familiarize with different steps in implementing the open source
		CO1. To expose the need of cyber laws to prosecute cybercrimes in the society.
69	Cyber Laws	CO2. To familiarize with Licensing Issues Authorities for Digital Signatures.
		CO1. To equip students with basic practical skills with sufficient theory.
	Quality, Reliability and	CO2. To understand the principles involved in the application area.
70	Operations Research	CO3. To develop the power of systematic thinking and reasoning, practical approach
		and exposition in the students.
	Computer Networks and	CO1. To demonstrate the functionalities of various layers of OSI model.
71	Compiler Design Lab	CO2. To demonstrate lexical analysis and syntax analysis phases of a compiler.
		CO1. To introduce concepts of designing dynamic web pages using HTML, CSS and
		Javascript.
72	Web Technologies Lab	CO2. To familiarize with JSP programming and master database access using JSP and
, 2		JDBC.
		CO3. To impart PHP programming and master database access using PHP and MySQL.
		CO1. To introduce guidelines, principles, and theories influencing human computer
		interaction
73	Human Computer Interaction	CO2. To familiarize with range of approaches, techniques, tools and methods available to
		them when designing useful and usable technology
		CO1. To familiarize with the basic concepts of discrete time signals and systems.
		CO2. To introduce the concepts of Z-transform and frequency domain representation
74	Digital Signal Processing	of discrete time signals.
		CO3. To familiarize with the designing of digital filters and their realization.
		CO1. To introduce the basic concepts of control systems by developing mathematical
		models for physical systems.
		CO2. To equip the students to analyze the time domain behavior of linear control systems.
75	Control Systems	CO3. To impart analytical and graphical methods to quantify stability of linear control
		systems.
		-
		CO4. To introduce the state variable theory as a pre-requisite to advance control systems.
		CO1. To disseminate knowledge on analyzing the running time of algorithms using
77	Design and Analysis of	asymptotic notations.
	Algorithms	CO2. To introduce algorithmic design paradigms such as Divide and Conquer, Greedy
		Method, Dynamic Programming, Back Tracking, Branch and Bound with illustrations.
	Data Warehousing and Data	CO1. To introduce the concepts of Data warehousing and Data mining.
78	Mining	CO2. To familiarize with the concepts of association rule mining, classification, clustering
		techniques and algorithms.
		CO1. To get familiar with the Object Oriented Analysis and Design in software
79	UML and Design Patterns	development, develop UML structural and behavioral models of an application.
		CO2. To describe and choose an appropriate Design Pattern to refine the model.
80	Artificial Intelligence	CO1. To familiarize the concepts of AI for representation of knowledge and problem
		solving.
81	Scripting Languages	CO1. To familiarize with jQuery, JSON, PERL, Ruby, AJAX to develop client-side and
01	Seripting Languages	server-side web applications.
		CO1. To familiarize with the architecture of 8086 microprocessor
82	Microprocessors and Interfacing	CO2. To introduce the assembly language programming concepts of 8086 processor.
		CO3. To impart knowledge on I/O interfacing.

83	Software Project Management	CO1. To introduce plan and manage projects at each stage of the software development life
03	Software Project Management	cycle (SDLC) CO2. To impart effective software projects that support organization's strategic goals.
		CO1. To impart the knowledge of essential components of the hydrologic cycle.
		CO2. To provide an overview and understanding of Unit Hydrograph theory and its
		analysis.
01	Undrology	
84	Hydrology	CO3. To familiarize with different methods of flood frequency analysis and flood routing.
		CO4. To impart knowledge on groundwater movement and well hydraulics.
		CO5. To familiarize with the relationships between soil, water and plant and their
		significance in planning an irrigation system.
85	Planning for Sustainable	CO1. To familiarize the concept of sustainable development
	Development	CO2. To introduce various components of sustainable development
		CO1. To introduce the concepts on working principles of electric drives used for different
86	Electrical and Hybrid Vehicles	hybrid electric vehicles.
		CO2. To familiarize with the different energy storage systems and their management
		strategies.
		CO1. To provide an overview of different methods of power generation with a particular
87	Power Plant Instrumentation	stress on thermal power generation.
		CO2. To impart knowledge on the different types of control loops.
88	Material Science	CO1. to understand the properties of engineering materials, so as to manipulate them for
00		the desired engineering applications.
89	Renewable Energy Sources	CO1. To study various types of non-conventional sources of energy and techniques used in
07	Kenewable Energy Sources	exploiting solar, wind, tidal and geothermal sources of energy and bio-fuels.
		CO1. To introduce different assistive technology devices
90	Assistive Technologies	CO2. To familiarize with the concepts of enhance speech communication and independent
		living
		CO1. To introduce the basics of biological concepts and relate it to engineering.
		CO2. To familiarize with physiology of cardio-vascular system, respiratory system & the
91	Bio-Medical Engineering	elements of Patient Care Monitoring.
	6 6	CO3. To impart the knowledge on the patient monitoring displays, diagnosis &
		techniques.
		CO1. To familiarize with defining own custom AngularJS directives that extend the
		HTML language
92	Node and Angular JS	CO2. To introduce the concepts of client-side services that can interact with the Node.js
		web server.
		CO3. To understand the best practices for server -side JavaScript.
		CO1. To understand security concepts, Ethics in Network Security
		CO2. To familiarize with new algorithms (mathematical formulas) and statistical measures
		that assesses relationships among members of large data sets.
93	Cyber Security	CO3. To identify the vulnerability of the Internet systems and recognize the mechanisms
20		of the attacks, and apply those to design and evaluate counter measure tools.
		CO4. To gain knowledge on security threats, and the security services and mechanisms to
		counter them.
		CO1. To familiarize with jQuery, JSON, PERL, Ruby, AJAX to develop client-side and
94	Scripting Languages	
		server-side web applications. CO1. To introduce plan and manage projects at each stage of the software development
05	Software Droject Management	
95	Software Project Management	life cycle (SDLC).
		CO2. To impart effective software projects that support organization's strategic goals
		CO1. To study and understand the systems which evolve randomly over time, especially in
96	Elements of Stochastic Processes	long run.
		CO2. To survey the important tools of stochastic processes.
		CO3. To model and solve engineering problems arising in real life situations.
		CO1. To study and understand the systems which evolve randomly over time, especially in
a -		long run.
96	Academic Communication	CO2. To survey the important tools of stochastic processes.
		CO3To empower them to carry out academic writing tasks such as project report writing
		with success.

		CO1. To exercise the data mining techniques such as classification, clustering,
97	Data Mining Lab	pattern mining etc with different datasets and dynamic parameters using
		WEKA tool.
		CO1. To apply the concepts of graph theory in real world problem solving
98	Graph Theory	CO2. To apply a combination of theoretical knowledge and independent mathematical
		thinking to investigate questions in graph theory
00	Early 11, 19 and any Dealers	CO1. To introduce the concepts of embedded system design and to show how such systems
99	Embedded System Design	are developed using a concrete platform built around.
		CO1. To introduce the concepts on digital control systems and their associated
		components.
		CO2. To impart knowledge on z-transformations for the analysis of digital control
		systems.
100		CO1. To understand security concepts, Ethics in Network Security
100	Digital Control Systems	CO1. To understand security concepts, Ethics in Network Security
		CO3.To impart knowledge on design of state feedback controller using pole placement
		method.
		CO4.To familiarize with the concepts on state model representation of discrete-time
		systems and its stability testing methods.
	Cryptography and Network	CO1.To familiarize with security concepts.
102	Security	CO2.To gain hands-on experience on cryptographic algorithms
		CO1. To introduce the architectural concepts of Hadoop and introducing map reduce
		paradigm.
103	Big Data Analytics	CO2. To disseminate knowledge on how to summarize, query, and analyze data with Hive
		CO3.To familiarize with business decisions and create competitive advantage with Big
		Data analytics.
1.04		CO1.To introduce the field of machine learning, in particular focusing on the core
104	Machine Learning	concepts of supervised learning.
		CO2. To familiarize with different types of learning algorithms.
105		CO1. To introduce the fundamentals of Internet of Things
105	Internet of Things	CO2. To familiarize with the building of small low cost embedded system using
		Arduino / Raspberry Pi or equivalent boards
106	NoSQL Databases	CO1. To familiarize with various NoSQL Databases to handle structured, semistructured
		and unstructured data
		CO1. To impart knowledge on good practices for requirements engineering, Requirements
107	Software Requirements	elicitation, elicitation techniques,
	Engineering and Estimation	CO2To familiarize knowledge on analysis models, Software quality attributes, software
		estimation, size estimation, Effort, Schedule and Cost Estimation.
		CO1. To familiarize with the concepts of mobile computing paradigm, GSM, and various
108	Mobile Computing	layers of mobile networks.
100	into the computing	CO2. To introduce the database issues, data delivery models, ad hoc networks platforms
		and protocols used in mobile environment.
109	Image Processing	CO1. To disseminate knowledge on various image processing techniques
		CO1. To introduce foundation knowledge in information retrieval.
110	Information Retrieval Systems	CO2. To familiarize about different applications of information retrieval techniques in the
		Internet or Web environment.
		CO1. To introduce how to formulate allocation problems as LPP, transportation problem
		and assign problems and locate solution.
111	Optimization Techniques	CO2. To familiarize with the concepts of queuing theory
	^	CO3. To impart knowledge on game theory concepts and to apply basic mathematical
		concepts to game Problems.
112	Disaster Management	CO1. To familiarize with disaster occurrence, strategies and remedial measures
		-
		CO1. To familiarize with durability aspects, quality of concrete causes of deterioration.
113	Repair and Retrofitting	CO2. To impart the knowledge on inspection and assessment of distressed structures,
113	Techniques	strengthen measures and demolition procedures.
		CO3. To familiarize with various concrete materials for repairs, and various precautions
		during retrofitting.
		CO1. To familiarize with the concepts of evolutionary optimization

Cryptography and Network Security Lab Network Programming Systems Software Robotics Web Mining Cloud Computing Agile Software Development Process Blockchain Technologies Distributed Systems Social Networks Web Services Deep Learning	 CO1. To familiarize with security concepts. CO2. To gain hands-on experience on cryptographic algorithms CO1. To introduce the basics of network Technologies. CO2. To impart in-depth knowledge in socket creation and client-server communication in TCP and UDP. CO3. To familiarize the importance of remote login and inter-process communication. CO1. To familiarize with the implementation details of assemblers, loaders, linkers, and macro processors. CO1. To familiarize with anatomy, kinematics, sensors and dynamics of a programmable machine, robot. CO1. To impart machine learning techniques to mine the web and other information networks like social networks and social media. CO2. To introduce search, retrieval, classification and recommendation methods. CO1. To provide the architectural concepts of Cloud computing CO2. To introduce the important concepts of Agile software development Process CO2. To impart the knowledge on values and principles in understanding agility CO1. To familiarize with the concepts of Block Chain. CO1. To familiarize with technological concepts of social networks. CO2. To familiarize with technological concepts of social networks. CO2. To familiarize with technological concepts of social networks. CO2. To familiarize with technological concepts of social networks. CO2. To familiarize with technological concepts of social networks. CO2. To introduce knowledge about various web services available and their architectures CO2. To impart WSDL tools, SOAP and UDDI architecture models in designing web service applications. CO1. To provide exposure to these advances and facilitate in depth discussions on deep learning.
Security Lab Network Programming Systems Software Robotics Web Mining Cloud Computing Agile Software Development Process Blockchain Technologies Distributed Systems Social Networks Web Services	 CO1. To familiarize with security concepts. CO2. To gain hands-on experience on cryptographic algorithms CO1. To introduce the basics of network Technologies. CO2. To impart in-depth knowledge in socket creation and client-server communication in TCP and UDP. CO3. To familiarize the importance of remote login and inter-process communication. CO1. To familiarize with the implementation details of assemblers, loaders, linkers, and macro processors. CO1. To familiarize with anatomy, kinematics, sensors and dynamics of a programmable machine, robot. CO1. To impart machine learning techniques to mine the web and other information networks like social networks and social media. CO2. To introduce search, retrieval, classification and recommendation methods. CO1. To provide the architectural concepts of Cloud computing CO2. To introduce the important concepts of Agile software development Process CO2. To emphasize the role of stand-up meetings in software collaboration. CO3. To familiarize with the concepts of Block Chain. CO1. To familiarize with technological concepts of social networks. CO2. To introduce the fundamental concepts of social networks. CO2. To introduce the fundamental concepts of social networks. CO2. To introduce the fundamental concepts of social networks. CO2. To provide a comprehensive overview of social networks. CO2. To introduce the fundamental concepts of social networks. CO2. To introduce knowledge about various web services available and their architectures CO2. To impart WSDL tools, SOAP and UDDI architecture models in designing web service applications. CO1. To provide exposure to these advances and facilitate in depth discussions on deep
Security Lab Network Programming Systems Software Robotics Web Mining Cloud Computing Agile Software Development Process Blockchain Technologies Distributed Systems Social Networks	 CO1. To familiarize with security concepts. CO2. To gain hands-on experience on cryptographic algorithms CO1. To introduce the basics of network Technologies. CO2. To impart in-depth knowledge in socket creation and client-server communication in TCP and UDP. CO3. To familiarize the importance of remote login and inter-process communication. CO1. To familiarize with the implementation details of assemblers, loaders, linkers, and macro processors. CO1. To familiarize with anatomy, kinematics, sensors and dynamics of a programmable machine, robot. CO1. To impart machine learning techniques to mine the web and other information networks like social networks and social media. CO2. To introduce search, retrieval, classification and recommendation methods. CO1. To provide the architectural concepts of Cloud computing CO2. To introduce the important concepts of Agile software development Process CO2. To impart the knowledge on values and principles in understanding agility CO1. To familiarize with the concepts of Block Chain. CO1. To familiarize with technological concepts of social networks. CO2. To familiarize with technological concepts of social networks. CO2. To introduce the fundamental concepts of social networks. CO2. To familiarize with technological concepts of social networks. CO2. To familiarize with technological concepts of social networks. CO2. To provide a comprehensive overview of social networks. CO2. To introduce knowledge about various web services available and their architectures CO2. To impart WSDL tools, SOAP and UDDI architecture models in designing web service applications.
Security Lab Network Programming Systems Software Robotics Web Mining Cloud Computing Agile Software Development Process Blockchain Technologies Distributed Systems Social Networks	 CO1. To familiarize with security concepts. CO2. To gain hands-on experience on cryptographic algorithms CO1. To introduce the basics of network Technologies. CO2. To impart in-depth knowledge in socket creation and client-server communication in TCP and UDP. CO3. To familiarize the importance of remote login and inter-process communication. CO1. To familiarize with the implementation details of assemblers, loaders, linkers, and
Security Lab	 CO1. To familiarize with security concepts. CO2. To gain hands-on experience on cryptographic algorithms CO1. To introduce the basics of network Technologies. CO2. To impart in-depth knowledge in socket creation and client-server communication in TCP and UDP. CO3. To familiarize the importance of remote login and inter-process communication.
Security Lab	CO1. To familiarize with security concepts. CO2.To gain hands-on experience on cryptographic algorithms CO1. To introduce the basics of network Technologies. CO2.To impart in-depth knowledge in socket creation and client-server communication in TCP and UDP.
Security Lab	CO1. To familiarize with security concepts. CO2.To gain hands-on experience on cryptographic algorithms CO1. To introduce the basics of network Technologies.
	CO1. To familiarize with security concepts. CO2.To gain hands-on experience on cryptographic algorithms
	CO1. To familiarize with security concepts.
Cryptography and Network	
	cosystem components.
Big Data Analytics Lab	CO2.To introduce design and demonstration of Hadoop ecosystem components.
· · · · · · · · · · · · · · · · · · ·	CO1. To demonstrate the basic concepts of Map Reduce, Hadoop and its ecosystem
	in the Internet or Web environment. CO1. To impart the knowledge of fuzzy set theory and its applications in Engineering
Information Retrieval Systems	CO2. To familiarize about different applications of information retrieval techniques
	CO1. To introduce foundation knowledge in information retrieval.
	CO2. To learn design considerations of wireless sensor networks.
Adhoc and Sensor Networks	CO1. To acquire fundamental concepts of ad hoc networks.
Decision Support Systems	CO2.To use various visualization tools for delivery of knowledge.
Business Intelligence and	CO1. To identify the process of decision making and use of model for decision making.
Jigital Forensics	CO2. To familiarize with the different roles a computer in crime investigation.
Digital Formation	CO1. To provide a comprehensive overview of digital forensic process.
	CO3. To develop an understanding of sampling and correlation techniques on signals.
Signals and Systems	CO2.To introduce various transform techniques on signals.
	CO1. To familiarize with the basic concepts of signals and systems.
· · · ·	CO2. To familiarize with real World IoT Design Constraints, Industrial Automation and Commercial Building Automation in IoT.
Cyber Physical Systems	development Platforms, connected products of Internet of things (IoTs).
	CO1. To prototype the Smart objects and provides a holistic understanding of
NON DESUMENTE EVALUATION	a mechanical elements.
Non Destructive Evaluation	CO1. To familiarize with the concepts of various NDE techniques to identify the defect
Green Engineering	environment for sustainable development.
	CO1. To impart the knowledge needed to minimize impacts of products, processes on
Sleethear Fower Othization	CO2. To impart knowledge on various heating methods and laws of illumination CO3. To familiarize with the concepts of refrigeration and air-conditioning.
	CO1. To familiarize with the mechanics of train movement.
	Optimization.
Modern Optimization Techniques	Algorithm, Particle Swarm Optimization, Differential Evolution and Ant Colony
	ignals and Systems Digital Forensics Business Intelligence and

		CO1. speak with a reasonable degree of fluency using communication strategies as well as
		conventions of politeness and courtesy;
		CO 2.listen to short audio and video clips in both standard Indian accent and native
1		English accent and gain both understanding of messages and sensitivity to native- speaker
1	Functional English	
		CO3. read fluently comprehending texts of different kinds;
		CO 4. write coherent paragraphs and technical reports; and
		CO5. guard against mistakes Indians typically make in their speech and writing in English
	Linear Algebra & Integral	CO1: use the concepts of eigenvalues and eigenvectors in Engineering problems
2	Transforms	CO2:apply Laplace transforms to find the solutions of ordinary differential equations.
		CO3: find Fourier transforms and inverse transforms for a given function.
		CO1. explain construction and working of laser
		CO2. relate the principles of propagation of light in optical fibers for applications in
		communications.
3	A unlind Diversion	CO3. apply the wave nature of electrons to understand the basic concepts of quantum
3	Applied Physics	computing.
		CO4. identify conductivity mechanism in semiconductors
		CO5. derive orbital and spin contribution for magnetism
		CO6. determine types of polarization and classius-mossoti relation
		CO1: understand the role of a citizen in protection of environment.
		CO2: analyze functional attributes of an ecosystem.
		CO3: enumerate the values of biodiversity.
4	Environmental Studies	CO4: identify appropriate processes to control pollution.
		CO5: identify waste management practices
		CO6: understand various stages of Environmental Impact Assessment (EIA)
		CO1: outline problem solving steps, c-tokens and data types.
		CO2: design algorithm and flowchart for solving problem.
		CO3: use control statements for writing the programs.
5	Problem Solving Through	CO4: apply the concepts of arrays and strings in problem solving.
	Computer Programming	CO5: use pointers and functions to develop C programs.
		CO6: distinguish structures and unions and develop programs using structures.
		CO7: demonstrate the operations on files.
		CO1: give short impromptu speeches with confidence and fluency and take part in
		conversations in different functional contexts using English following appropriate
		communication strategies;
~		CO2: check the pronunciation of words in a dictionary using their knowledge of
6	Functional English Lab	phonemic symbols;
		CO3: speak English with adequate attention to stress, rhythm, and intonation
		CO4: speak without their pronunciation being marred by regional peculiarities, achieving
		thereby greater intelligibility in their communication with non-Telugu speakers of English
		CO1: give short impromptu speeches with confidence and fluency and take part in
		conversations in different functional contexts using English following appropriate
	PROFESSIONAL COMMUNICATION LAB - I	communication strategies.
7		CO2: check the pronunciation of words in a dictionary using their knowledge of phonemic
7		symbols.
		CO3: speak English with adequate attention to stress, rhythm, and intonation; and
		CO4: speak without their pronunciation being marred by regional peculiarities, achieving
		thereby greater intelligibility in their communication with non-Telugu speakers of English.
		CO1: identify energy gap of a semiconductor.
		CO2: draw characteristic curves to estimate thermal coefficient of a thermsitor
	Applied Physics Lab	CO3: observe self timer and tuning nature of passive components like RC,LCR
8		CO4: verify magnetic field along the axis of a circular coil.
		CO5: determine frequency of AC and unknown tuning fork.
		CO6: calculate light gathering power of optical fiber
		CO7: estimate wavelength of unknown source
		CO1: Identify discrete components of computers.
		CO2: Prepare applications using MS Office.
9	Computer Programming Lab	CO3: Apply problem solving steps to solve a problem.
1	_	CO4: Obtain the frequency response characteristics of CE, CC and FET CS amplifiers.
1	1	

	1	
		CO5: Develop a C program for a given problem.
		CO1: speak with a reasonable degree of fluency and accuracy in professional
		communication situations (such as arriving at a consensus through discussion,
		making a presentation, and taking part in a telephone conversation)
		CO2: listen to short audio and video clips in native English accent (British and American)
10	Professional Communication	and gain both understanding of messages and sensitivity to native-speaker accents
10	Professional Communication	CO3: read fluently, comprehending texts of different kinds using multiple strategies and
		higher- order skills
		CO4: produce written discourses of different kinds;
		CO5: guard against grammatical errors Indians typically make in their speech and writing
		in English
		CO1: apply numerical techniques for solutions of Algebraic, transcendental and ordinary
		differential equations.
11	Numerical Methods and	CO2: find interpolating polynomial for the given data.
	Differential Equations	CO3: apply the learnt techniques to solve first and second order differential equations in
		various engineering problems
		CO4: find the maximum and/or minimum points on a given surface.
		CO 1: explain the synthesis, properties and applications of nano materials.
		CO 2: analyze the principles in working of LCD, sensors and bio sensors.
		CO 3: explain the preparation, properties and applications of polymers.
12	Chamistry	CO 4: explain the characteristics of super conducting materials and non-elemental
12	Chemistry	semiconductors.
		CO 5: analyze the working principles of batteries, fuel cells and solar cells.
		CO 6: explain the principles of green chemistry and suitable methods for synthesis of
		green products
		CO1: comprehend different moral perspectives and one's own Ethical standards.
		CO2: understand the concept of safety and risk.
		CO3: explain different initiatives to protect nature.
13	Engineer and Society	CO4: identify the role of Information Technology.
		CO5: understand different types of infringement of Intellectual Property Rights
		CO6: analyze the importance of Entrepreneurship.
		CO1: distinguish the behavior of PN junction diode under forward bias and reverse bias
14	Elements of Electronics	conditions.
14	Engineering	CO2: select appropriate semiconductor devices for different electronic circuits.
		CO3 analyze the rectifier circuits with and without filters.
		CO4: characterize the performance of BJT, FET, and MOSFETS
		CO1: Demonstrate the basic elements of Python
		CO2: Implement programs using Python Control Structures.
15	Python Programming	CO3: Design functions in Python to solve the problems.
15	Python Programming	CO4: Apply strings, lists and tuples in developing Python programs
		CO5: Implement programs with the help of Dictionaries to solve the problems.
		CO6: Develop python programs by using files.
		CO1: enhance the effectiveness of their communication through body language;.
		CO2:take part in interactional communication (i.e. communication that serves the purpose
		of social interaction or small talk) with fluency.
		CO3: take part in transactional communication (i.e. communication that serves the purpos
		of carrying out functions such as giving directions, complaining and apologizing) with
		fluency
16	Professional Communication Lab	CO4 speak professionally in telephone conversations
10	rioressional Communication Lab	CO5: make effective presentations using a range of strategies, including a good
		organization of the content, impressive opening and closing, the use of suitable visual aid
		the use of stories/anecdotes to illustrate a point, effective use of body language and good
		handling of question and answer session.
		CO6 : take part in group discussions and debates successfully.
		CO7: Answer questions at an elementary level in job interviews
		CO8:use team-building skills with impact in different situations.
		CO1: Study and test different electronic components and understand the working of
	Flements of Flectronics	various electronic lab equipment

17	Elements of Electronics	CO2: Obtain the I-V characteristics of PN junction diode, Zener diode, BJT, FET
	Engineering Lab	CO3: Obtain the performance characteristics of Half wave and Full wave rectifiers
		without and with filters, Zener voltage regulator.
		CO1. apply the concept of Mathematical logic in software development process.
		CO 2.use the concept of Pigeonhole principle to derive the $\Box \Box n \log n \Box$ lower bound.
		CO3. apply the concepts of graph theory in robotics, computer vision and computer
18	Discrete Mathematical Structures	graphics.
		CO 4. use the concepts of graph theory to provide solutions for routing applications in
		computer networks.
		CO5. apply the recurrence relation for analyzing recursive algorithms.
		CO1: demonstrate the working process of sorting (bubble, insertion, selection and heap)
		and searching (linear and binary) methods using a programming language.
		CO2:design algorithms to create, search, insert, delete and traversal operations on linear
19	Data Structures	and non- linear data structures.
17		CO3: evaluate the arithmetic expressions using stacks.
		CO4: choose appropriate collision resolution techniques to resolve collisions.
		CO5: compare array and linked list representation of data structures.
		CO1. translate number given in one number system to another number system. CO2. apply complements to perform addition and subtraction of signed numbers.
20		CO3. reduce Boolean function using Boolean laws, theorems and K-Maps.
20	Digital Logic Design	CO4. design combinational logic circuits such as adders, subtractors, decoders, encoders,
		Multiplexers and De-Multiplexers.
		CO5. prepare characteristic equation and excitation tables of SR, JK, T and D flip-flops.
		CO6. design counters and registers using flip-flops.
		CO1: apply Object Oriented approach to design software.
		CO2: create user defined interfaces and packages for a given problem.
21	Object Oriented Programming	CO3: develop code to handle exceptions.
21	Through Java	CO4: implement multi tasking with multi threading.
		CO5: develop Applets for web applications.
		CO6: design and develop GUI programs using AWT components.
		CO1: demonstrate the Architecture of Unix, features and its functions.
		CO2: classify the UNIX file system and work with file handling, process, disk, networking
		utilities.
22	UNIX And SHELL Programming	CO3: illustrate file management and directory handling system calls
		CO4: discriminate types of processes and able to create new process using system calls.
		CO5: choose appropriate signals to interrupt the system using system calls.
		CO6: develop shell scripts for given applications
		CO1: demonstrate linear and binary search techniques to find an element in a given list of
		numbers.
		CO2: select an appropriate sorting technique to sort the given list of numbers.
		CO3: develop suitable code to simulate the operations on linked lists.
23	Data Structures Lab	CO4: determine the suitable ways to implement Stacks and Queues.
		CO5: choose appropriate data structure for evaluation of arithmetic expressions.
		CO6: demonstrate the operations on Binary Search Trees and Graphs. CO7: determine the use of hashing in implementing dictionaries.
		<u> </u>
		CO1: use inheritance to extend the functionality of classes.
		CO2: prepare code that exhibits polymorphism.
24	Object Oriented Programming	CO3: examine multi tasking with multi threading.
	Lab	CO4: create packages for reusability.
		CO5: create an effective GUI using AWT components
		CO6: implement event handling.
		CO1. use the concepts of probability in different real time problems.
a -		CO 2.apply probability distribution in appropriate scenario.
25	Probability And Statistics	CO3. find confidence intervals for estimating population parameters.
		CO 4. apply a range of statistical tests appropriately.
		CO5. measure correlation between variables and obtain lines of regression.
		CO1: Apply a basic concept of digital fundamentals to Microprocessor based personal

26	Microcontrollers	CO2:identify a detailed S/W &H/W structure of the Microprocessor& Microcontroller.
	wherecontrollers	CO3: Interface I/O devises to 8086 using Intel 8255.
		CO4: distinguish between Microprocessors and Microcontrollers.
		CO1. compare the automata based on their recognizing power.
		CO 2. design finite automata for regular languages.
		CO3. reduce DFA by applying minimization algorithm.
		CO 4. write regular expressions for regular languages or for DFA by applying Arden's
27	Formal Languages And Automata	theorem.
	Theory	CO5. generate grammar for CFL
		CO6. use algorithm to simplify grammar.
		CO 7. design PDA for context free languages
		CO8. design Turing Machine for the phrase-structured languages.
		CO1: identify different types of instructions.
		CO2:differentiate micro-programmed and hard-wired control units.
20	Computer Organization And	CO3: analyze the performance of the hierarchical organization of memory.
28	Architecture	CO4: demonstrate various operations on fixed and floating point numbers.
		CO5: summarize different data transfer techniques.
		CO6: demonstrate the use of parallel processing.
		CO1. recognize the importance of database system over file processing system.
		CO 2. analyze an information storage problem and derive an information model in the form
		of an entity relationship diagram.
29	Database Management Systems	CO3. write simple and complex queries using Structured Query Language (SQL) for
2)	Database Wanagement Systems	storage, retrieval and manipulation of data in a relational database.
		CO 4. employ principles of normalization for designing a good relational database schema.
		CO5. describe the issues and techniques relating to concurrency and database recovery in a
		CO1: outline the relationship between system software and machine architecture.
30	Systems Software (Open	CO2: analyze working of assembler for a simplified Instructional computer.
50	Elective-1)	CO3: describe the important features of linkage Editors and Dynamic Linking.
		CO4: identify the mostly used macro processors algorithms and data structures.
		CO5: compare the functions of Absolute Loader, Bootstrap Loaders. CO1: create relational database with constraints
		CO2: formulate simple and complex queries using features of Structured Query Language
	Database Management Systems	(SQL) for storage, retrieval and manipulation of data in a relational database.
31	Lab	CO3: create views on relational database based on the requirements of users.
	Lau	CO4: implement PL/SQL programs for processing multiple SQL statements.
		CO5: implement triggers on a relational database
		CO1. explain the basic concepts of Software Engineering.
		CO 2.select the suitable process model based on the client requirements.
		CO3. calculate software proficiency in terms of cost and schedule.
32	Software Engineering	CO 4. list the specifications of end-user according to business needs
52		CO5. choose the appropriate architectural style for a given Scenario.
		CO 6. infer the system model for a sample case study.
		CO7. deduce test cases by following different testing methodologies.
		CO1: list out compilation process steps of a language.
		CO2:use regular languages to identify the tokens of a programming language.
		CO3: design a parser to verify the syntax of a programming language.
	Compiler Design	CO4: compare top down parser with bottom up parser
33		CO5: create symbol table to access identifier information
		CO6: apply code optimization techniques to enhance the efficiency of the intermediate
		code.
		CO7: write a program for the execution of DAG to generate the code.
		CO1. describe the role, functions and structures of operating systems.
		CO 2. evaluate the performance of CPU scheduling algorithms by calculating average
		waiting time and turnaround time.
		CO3. compare and contrast memory management schemes for efficient utilization of
34	Operating Systems	memory. CO 4. apply deadlock prevention, avoidance and recovery techniques to keep the system in
		safe state.
	I	pare state.

		CO5. determine seek time of disk scheduling algorithms.
		CO6. develop software or hardware based solutions for critical section problems.
		CO 7. analyze files and directory structures and implementations.
		CO1: identify various HTML tags and their purpose
		CO2:develop dynamic web pages using HTML, CSS and Javascript
35	Web Technologies	CO3: use XML to store and transport data
00		CO4: design web applications using JSP and PHP.
		CO5: connect to heterogeneous databases using JSP as well as PHP
		CO1. identify the problems that are amenable and can be solved by using AI techniques.
		CO 2.analyse the problem solving and game playing techniques.
		CO3. specify the classical Artificial Intelligence algorithms, which are used to solve the
	Artificial Intelligence	heuristic search and game playing problems.
36	(Professional elective-1)	CO 4. apply the basic principles and algorithms of Artificial Intelligence to recognize,
	(Professional elective-1)	model and solve the state space search, knowledge representation and reasoning problems.
		CO5. formulate the Reasoning model and state the conclusion for the uncertainty problems
		using actions and their effects over the time.
		CO6. describe expert systems and their applications.
		CO1: illustrate representations of sets and operations on sets and dictionaries.
		CO2: construct Priority queues such as min heap and max heap for the given data.
37	Advanced Data Structures	CO3: create AVL, Red Black, Splay, B and B+ Trees for the given data and perform
31	(Professional elective-1)	insertion, deletion and search operations on them.
		CO4: search for a pattern in the given text using Pattern Matching Techniques.
		CO5: demonstrate insertion and search operations on tries and also list its applications.
		CO1. state the need and applications of open source software.
		CO2: compare and Contrast between Open source and commercial software
38	Open Source Software (Open	CO3: demonstrate LINUX operating systems concepts.
	elective-II)	CO4: create database in MYSQL and perform operations on it.
		CO5: design and develop a web application using PHP.
		CO1. outline the pros and cons of Internet.
		CO 2. operate on confidential data in a precautious manner.
		CO3. discuss Criminal Justice in India and its Implications.
39	Cyber Laws (Open Elective-II)	CO 4. interpret the Cyber Consumers under the consumer Protection Act.
		CO 5. devise the legal framework for Confidential Information.
		CO 6. determine the e-commerce issues for copyright protection and defend personal data
		from being hacked.
		CO1. implement CPU and disk scheduling algorithms.
4.0	Operating Systems And Compiler	CO2: develop code for memory management techniques.
40	Design Lab	CO3: design code to implement Bankers algorithm to avoid dead locks.
		CO4: implement lexical analyzer and syntax analyzer.
		CO1. design dynamic web pages using HTML, CSS and JavaScript.
		CO2: access and Validate form data using JavaScript and PHP.
41	Web Technologies Lab	CO3: connect to database using JSP and JDBC and perform various operations.
		CO4: connect to MySQL using PHP and perform various operations.
		CO1. analyze the performance of algorithms by calculating time and space complexity.
		CO 2.design algorithms for binary search, quick sort and merge sort by applying divide and
		conquer technique.
		CO3. apply Greedy technique to find solution for knapsack, job sequencing, single source
	Design And Analysis Of Algorithms	
42		shortest path and minimum cost spanning trees.
		CO 4. design algorithm to find optimal solution to matrix chain multiplication, 0/1
		knapsack, all pairs shortest paths and travelling salesperson problems using dynamic
		programming
		CO5. construct state space tree to find all possible solutions to various problems using
		back tracking and branch and bound techniques.
		CO1: outline different types of databases used in data mining.
	i i i i i i i i i i i i i i i i i i i	CO2:apply pre-processing methods on raw data to make it ready for mining.
		CO3: illustrate the major concepts and operations of multi dimensional data models.

43	Data Warehousing And Data	CO4: analyze the performance of association rules mining algorithms for finding frequent item sets from the large databases.
.5	Mining	CO5: simplify the data classification procedure by selecting appropriate classification methods / algorithms.
		CO6: classify various clustering methods and algorithms on data sets to create appropriate clusters.
		CO1. recognize the need for object oriented modeling for system development.
	Object Oriented Analysis And Design	CO 2.apply structural and behavioral modeling techniques in designing library management system.
44		CO3. implement Advanced structural and Behavioral Modeling for different real world issues like Passport automation systems.
		CO 4. construct software and hardware architecture models for designing library
		management system and Passport automation systems.
		CO5. design an object oriented software system, using structural and behavioral models
		based on the requirements of the user.
		CO1: compare protocol models (OSI, TCP/IP) and select suitable protocol for network design.
		CO2: design a network by deciding relevant multiplexing and switching technique to improve performance of the network.
45	Computer Networks	CO3: apply flow control, error control techniques and protocols to verify the correctness of data in the communicated network.
45	Computer Networks	CO4: specify and identify deficiencies in MAC sublayer protocols.
		CO5: apply routing and congestion control algorithms to deliver data packets across the
		networks.
		CO6: use communication protocols like IP, TCP, UDP, DNS, HTTP, FTP across the Internet.
		CO1. outline soft computing techniques and its applications.
	Soft Computing Techniques (Professional Elective-II)	CO 2. classify the architecture of Artificial neural networks and learning techniques.
		CO3. interpret the working of Back propagation networks, back propagation algorithm and
46		associative memory.
		CO 4. differentiate fuzzy sets and crisp sets operations. CO5. apply if-then rules on fuzzy sets and perform Fuzzyfications & Defuzzifications.
		CO5. apply in-then rules on ruzzy sets and perform ruzzy reations & Detuzzineations. CO6. generalize the working principle, representations of genetic algorithm and its
		applications.
		CO1: make use of hard and soft real time systems.
	Real Time Systems (Professional Elective-11)	CO2: evaluate Clock driven scheduling, weighted round-robin, priority driven approaches in real time systems.
47		CO3: compare rate monotonic and deadline monotonic algorithms.
		CO4: analyze multi task scheduling algorithms for periodic, aperiodic and sporadic tasks.
		CO5: demonstrate temporal distance and DCM.
		CO6: outline real time communications architecture.
	Image Processing (Professional Elective-II)	CO1. use appropriate image enhancement technique to improve the quality of an image.
48		CO 2. apply suitable image segmentation technique for an application.
10		CO3. analyze various image compression techniques.
		CO 4. apply morphological operations to modify the structure of an image.
		CO1: outline Pair Programming for solving software problems
	Agile Software Development Process (Professional Elective-II)	CO2: write Reports of Software Collaboration.
49		CO3: prepare less or zero bug software for sample scenario.
		CO4: reduce the amount of slack in the software.
		CO5: develop methodologies for estimating performance stories.
		CO6: justify the waste elimination process in Software in mastering Agility.
	Scripting Languages (Open elective-III)	CO1: use jQuery with DOM to manipulate HTML elements, attributes and CSS.
		CO2: store and exchange data between server and browser using JSON.
50		CO3: develop PERL scripts using arrays, hashes, control structures and subroutines. CO4. write Ruby scripts using data types, arrays, hashes, control structures and classes.
		CO5: retrieve data from a database using PHP and AJAX.
		CO1: analyze the different software projects.

	Software Project Management	CO2: prepare project plans that address real time management challenges. CO3: relate important risks facing a new project.
51		CO3. relate important fisks facing a new project. CO4. design effective software development model to meet organizational needs.
	(Open Elective-II)	CO5: recognize appropriate methodology to develop a project schedule.
		CO3: recognize appropriate methodology to develop a project schedule. CO6: apply appropriate techniques to assess ongoing project performance.
		CO1: demonstrate data link layer framing methods.
	Software Project Management	CO2: calculate best route by using distance vector routing algorithm.
52	Software Project Management (Open Elective-III)	CO3: develop client/server communications using socket API.
		CO4: illustrate error detection method by using CRC.
		CO5: evaluate the performance of classification, association and clustering algorithms or different Data sets.
	Managerial Economics And Financial Analysis	CO1. evaluate the economic concepts and apply them in various changing situations in
		industry.
		CO 2.predict the demand for a product of a company and analyze various factors
		influencing demand elasticity.
53		CO3. apply various aspects of production and cost analysis in business decision making.
00		CO 4. gain knowledge on various forms of business organizations and their establishment
		CO5. propose various pricing strategies for different products or services.
		CO 6. apply the accounting rules in determining the financial results and prepare financia
		statements.
		CO7. evaluate various investment opportunities in business.
		CO1: summarize the importance of Big Data and its problems (storage and analysis).
		CO2: outline the building blocks of hadoop and anatomy of file read and write.
54	Big Data Analytics	CO3: analyze data with hadoop MapReduce.
		CO4: generalize how MapReduce works when running a job.
		CO5: choose best programming tools for solving real world and industrial problems.
		CO1. describe basic concepts of machine learning.
		CO 2.apply Find-S and Candidate-elimination algorithms to solve problems of moderate
	Machine Learning And Pattern	complexity.
55	Recognition (Professional Elective-III)	CO3. calculate posterior probabilities using Bayes theorem.
		CO 4. differentiate lazy and eager learning algorithms along with their strengths and
		weaknesses.
		CO5. recognize patterns using HMM and SVM.
		CO1: describe important characteristics, architectural features of distributed systems.
		CO2: identify various ways of Inter process Communications and synchronization using
		different algorithms.
		CO3: estimate the performance of various deadlock algorithms to achieve synchronization
	Distributed Operating Systems (Professional Elective-III)	between the participating nodes of distributed system.
56		CO4: analyze processes and processors and their scheduling policies to avoid deadlock ar
		synchronization problems.
		CO5: classify different file system of distributed environment in storing and retrieving dat
		efficiently using various file usage methods.
		CO6: distinguish multiprocessor, page based, shared-variable distributed shared memory
		CO1: explain human and computer components functions regarding interaction with
	Human Computer Interaction (Professional Elective-III)	computer.
		CO2: illustrate the interaction between human and computer components.
		CO3: apply the screen design guidelines in creating User Interface.
57		CO3: apply the screen design guidelines in creating User Interface. CO4: develop effective GUI using appropriate controls for windows based applications.
		CO4: develop effective GO1 using appropriate controls for windows based approximations.
		CO5: choose appropriate widgets, components and tools for effective design of User
		Interface
	Software Testing Methodologies (Professional Elective-III)	CO1: formulate problem by following software testing life cycle.
		CO2: design test cases for testing software project using black box testing techniques.
58		CO3: apply path testing on a given program and uncover bugs present in the program.
50		CO4: compare verification and validation in the context of software testing.
		CO5: describe regression testing and software quality assurance.
		CO6: demonstrate the use software testing tools for testing projects.
		CO1: understand the concepts of Business Intelligence, technologies and organizations fo
		COT: understand the concepts of Business interligence, technologies and organizations to

		CO2: acquire knowledge about different types of capabilities for the presentation of information.
-	Business Intelligence (Professional Elective-IV)	CO3: demonstrate the design of Data warehouses and enterprise architecture for data mining applications.
59		CO4: apply data mining models to business analytics problems to identify the impact of BI on corporate business performance.
		CO5: employ data mining tools and techniques for customization and standardization in decision support systems.
		CO6: describe the characteristics and steps of good business intelligence solutions for decision making system
	Mobile Computing (Professional Elective-IV)	CO1: explain mobile computing paradigm, GSM, and layers of mobile networks.
		CO2: outline the mobile IP and Dynamic Host Configuration Protocol in network layer.
		CO3: describe the different TCP's and transmission mechanisms in transport layer.
60		CO4: illustrate Data Dissemination and Synchronization models for applications.
		CO5: synthesize MANET applications and routing algorithms with security mechanisms.
		CO6: summarize the layers and functionalities in wireless application protocol and
		Bluetooth
		CO1: outline Multimedia and list its applications.
		CO2: categorize the usage of color palettes in multimedia.
61	Multimedia Tools	CO3: generalize the principles of Animation and expand various video formats.
01	(Professional Elective-IV)	CO4: demonstrate the four primary stages in a multimedia projects.
		CO5: collect various Multimedia Authoring tools.
		CO6: discuss various multimedia tools for Internet and WWW.
		CO1: describe security attacks and services over networks
	Cryptography And Network	CO2:differentiate symmetric and asymmetric encryption techniques.
62	Security (Professional Elective- Iv)	CO3: apply integrity checking and authentication techniques.
		CO4: compare E-mail security and IP level security.
		CO5: use firewalls and intrusion detection techniques for system security.
		CO6: outline web security threats and counter measures.
		CO1:evaluate architecture and protocols in adhoc and wireless sensor networks.CO2:identify applications of adhoc and WSN's.
	Adhoc And Sensor Networks (Open Elective-Iv)	CO3: illustrate wireless sensor networks design aspects.
63		CO3: synthesize routing protocols for adhoc wireless networks.
05		CO5: outline Transport layer and security protocols for Ad hoc wireless networks.
		CO6: summarize layer wise functionalities of wireless sensor networks.
		CO7: describe MAC protocols in adhoc and WSN's.
		CO1: identify basic theories in information retrieval systems.
	Information Retrieval Systems (Open Elective-Iv)	CO2: identify the analysis tools as they apply to information retrieval systems.
		CO3: understand the problems solved in current IR systems.
64		CO4: describes the advantages of current IR systems.
		CO5: understand the difficulty of representing and retrieving documents.
		CO6: understand the latest technologies for linking, describing and searching the web.
	Big Data Analytics Lab	CO1: choose suitable LINUX commands to work in Hadoop environment.
65		CO2: use HDFS file structure and MapReduce framework to solve complex problems.
		CO3: analyze data using Pig and Hive.
	Steganography And Biometrics (Professional Elective-V)	CO1. outline the basic terminology of steganography.
		CO 2. interpret different scenarios related to steganalysis.
		CO3. distinguish between Biometric verification and identification.
66		CO 4. apply Finger Scan and Facial Scan Technologies to provide person identification in
		logical access environment.
		CO5. compare and contrast physiological biometrics with behavioral biometrics in terms of
		their accuracy.
		CO1: outline the fundamentals of Parallel computing.
		CO2: demonstrate Flynn's taxonomy.
		CO3: classify Different Structures of Parallel Computers.
		· · · · · · · · · · · · · · · · · · ·
67	Parallel Computing (Professional Elective-V)	CO4: identify the methodologies for the development of parallel processing applications using CUDA.

	1	
		CO5: determine the important features of Graphical Processing Unit in application
		development.
		CO6: design and develop programs using CUDA Development Tool kit.
	Virtual And Augmented Reality (Professional Elective-V)	CO1. identify basic elements of virtual Reality
60		CO 2.describe various input and output devices required for VR experience
68		CO3. classify human factors that affect VR experience.
		CO 4. distinguish augmented reality from virtual reality
		CO5. determine the object position and orientation in virtual space.
	E-Commerce (Professional Elective-V)	CO1: outline the fundamentals in E-Commerce with respect to consumer and organization
		oriented applications
		CO2:compare Mercantile process models in context to consumer and merchant
		perspectives
		CO3: illustrate smart cards, credit/debit cards, Digital token based systems
69		CO4: analyze the EDI problems and performance of VAN in inter-organizational
		commerce
		CO5: classify the procedures of work flow automation and SCM to improve
		intraorganizational commerce
		CO6: distinguish digital documents from document library for development of Ecommerce
		through online marketing process
		CO1: outline the basic concepts of Internet of Things.
	Internet Of Things (Professional Elective-VI)	CO2:analyze the requirements and specifications to design home automation applications.
		CO3: develop smart city applications using ArduinoIoT kit.
70		CO4: design agricultural applications using Raspberry pi IoT kit.
		CO5: use the tools such as AutoBahn, Xively Cloud communication API's to exchange
		data between cloud and IoT kit.
		CO6: analyze Home Automation, Agriculture, Smart City applications.
		CO1: differentiate the stages in historical evolution of cloud computing.
	Cloud Computing (Professional Elective-VI)	CO2: use suitable cloud services to define cloud for the enterprise.
71		CO3: demonstrate hardware level and OS level virtualization to implement virtual
/ 1		machines
		CO4: design machine images, web applications and databases for virtual machines.
		CO5: apply data, network and host security for the cloud.
	Block chain Technologies (Professional Elective-VI)	CO1: outline fundamentals of Block chain.
		CO2: analyze the working of Block Chain.
72		CO3: describe propelling business with block chains.
		CO4: illustrate Hyperledger and Linux Foundation Project, use cases.
		CO5: summarize challenges of Block chain
	Design Patterns (Professional Elective-VI)	CO1: demonstrate how Design Patterns Solve Design Problems.
		CO2: design a Document Editor using Design Patterns.
		CO3: use Creational Patterns for object creation mechanism.
73		CO4: demonstrate how Structural Design Patterns use to ease the design by identifying a
		simple way to realize relationships between entities.
		CO5: implement behavioral design patterns in carrying out communication between
		objects.
