Key Note Address by Resource Person

Resource Person   : Mr. G. Hemanth Kumar.

Designation   : Lead-RPA

Location   : Smart Bridge, Hyderabad, India.

Robotic Process Automation (RPA) refers the use of software robotics to do jobs traditionally filled by human workers. RPA doesn't refer to actual robots. Instead, the label applies to increasingly sophisticated software solutions, combined with artificial intelligence and machine learning, to complete repetitive tasks in a reliable, consistent, and fully-documented fashion. The advantages are enormous. Once the software has been developed, the time-to-market is very short, and it is usually designed to use existing systems and software applications. As a result, existing infrastructure doesn't need to be modified to accommodate the new processes.

The danger of this, of course, is that the barriers to entry are low, making it easier and easier to replace human workers with software solutions. A study by the Hackett Group found that the number of finance employees per billion in revenue has already decreased by 40% (between 2004 and 2014), so the notion that this job displacement will begin in some distant future is categorically untrue. White collar jobs are being replaced right now! It's happening today, and it will accelerate even further in the future. Already today, enterprise software solutions (including ERP and CRM providers like Oracle, SAP, Salesforce, Epicor, and BMW Software among others) are incorporating robotic process automation in their standard configurations.

- UI Path: Design, deploy and manage robotic workforce in daily operations
- Softomotive: Reliable and scalable RPA technology solutions
- Pegasystems: Cloud-based platform for RPA in ERP and CRM systems
- Kryon Systems: innovative and intelligent RPA for digital transformation
- Kofax: Simplify business operations with RPA technology solutions
- IntelliCog Technologies: End-to-end RPA consulting and outsourcing
- DayThree Business Services: replaces repetitive service processes with software robots
- Blue Prism: Agile and cost-effective RPA of rules-based office admin tasks
- Automation Anywhere: RPA solutions for BPO, IT, Healthcare, Finance, and Insurance

Introduction:

Git is a free and open source distributed version control system designed to handle everything from small to very large projects with speed and efficiency. Git is easy to learn and has a tiny footprint with lightning fast performance. It outclasses SCM (Software Code Management) tools like Subversion, CVS, Perforce, and ClearCase with features like cheap local branching, convenient staging areas, and multiple workflows.

GitHub is an American company that provides hosting for software development version control using Git. It is a subsidiary of Microsoft, which acquired the company in 2018. It offers all of the distributed version control and source code management (SCM) functionality of Git as well as adding its own features. It provides access control and several collaboration features such as bug tracking, feature requests, task management, and wikis for every project.

Software Documentation / Technical Documentation is an important task during the product development so that the users need not to worry about how to use your product. From a very small project to a project with a huge number of developers, technical documentation writing is easy by using ReadTheDocs and Sphinx tools.

Duration:

- 2 Days or 12 Hours.

Summary

Github is a provider of Internet hosting for software development and version control using Git. It offers the distributed version control and source code management (SCM) functionality of Git, plus its own features. It provides access control and several collaboration features such as bug tracking, feature requests, continuous integration and wikis for every project. Headquartered in California, it has been a subsidiary of Microsoft since 2018.

It is commonly used to host open-source projects. As of November 2021, Github reports having over 73 million developers and more than 200 million repositories. It is the largest source code host as of November 2021.

Projects on GitHub.com can be accessed and managed using the standard Git command-line interface; all standard Git commands work with it. GitHub.com also allows users to browse public repositories on the site. Multiple desktop clients and Git plugins are also available. The site provides social networking-like functions such as feeds, followers, wikis and a social network graph to display how developers work on their versions of a repository and what fork is newest.
